

Proofpoint provides cybersecurity and compliance solutions to help protect people on communication channels including email, the web, the cloud, and social media:

## **Email Security and Protection**

Extensible email security platform to block malware and non-malware email threats. It provides you with visibility into your greatest risk - your people - providing actionable insights to help you better understand the risks you face and respond to threats faster.

## **Advance Threat Protection**

Helps prevent, detect, and notify you of advanced threats – through email, mobile, social, and the desktop – and so helps you resolve them before they cause lasting harm.

## **Security Awareness & Training**

Helps ensure your users know what to do when faced with a real threat by providing them with targeted, threat-guided education.

## **Cloud Security**

Enables secure access to the web and cloud services with access control, threat protection, data security, security monitoring, and acceptable-use control.

## **Compliance and Archiving**

Helps legal and compliance teams to retain, discover and supervise content across channels. Helps to make it easier for you to take more informed compliance decisions, manage information risk and improve investigation readiness.

## **Information Protection**

Information Protection applies security solutions and other technologies, as well as processes and policies, to give you a people-centric approach to data loss prevention (DLP). You get data protection against accidental mistakes, attacks and insider risk across your cloud services, email, endpoint, cloud apps, web, and on-premises and shared cloud repositories.

## **Digital Risk Protection**

Digital Risk Protection - secures your brand, employees and facilities against digital abuse / security risks across web domains, social media, and the deep and dark web.

Proofpoint also provides remote resources to aid Customers' installation, configuration, upgrade and /or support of the above offerings.
