

Check Point Harmony – User, Device & Access Security

Check Point Harmony helps to protect endpoint and mobile devices, email and internet connections from the sophisticated attacks such as malware, ransomware, phishing and bot attacks. Check Point Harmony uses a zero trust methodology to corporate applications and can prevent access to malicious apps, sites and documents plus unauthorized network access and more.

Check Point CloudGuard – Cloud Security

Check Point CloudGuard is a secure cloud platform that helps prevent advanced threats and can provide visibility and control over virtually any workload across any cloud. Check Point CloudGuard provides cloud native security for all your assets, applications and workloads, across multi-clouds, helping you to automate security everywhere, with unified threat prevention and posture management. It is a solution that provides context to secure your cloud with confidence.

Check Point Infinity

Check Point Infinity is an enterprise license agreement and consumption model that helps provide complete threat prevention that can secure against the most sophisticated cyber security attacks. Adopting a consolidated security approach with Check Point Infinity architecture can help businesses realize preemptive protection against advanced fifth-generation attacks, while helping to increase operational efficiency and reduce security costs.
