

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY

3.1 Residential Flat Rate Service

This service is no longer available to new Customers.

(C)

Provides flat rate exchange service. Flat Rate customers are not eligible for service combination package discounts, optional EACS, EMS, or usage allowances. NRCs may also apply.

3.1.1 Exchange Service Rates - General

Provides a customer with the ability to originate calls to all other stations on the public switched network in the caller's local calling area. Carrier concurs in the territory, including any extended local calling areas of underlying carrier. All exchange lines include touch tone. All services offered are subject to availability for resale from the underlying carrier. Extended Metro Service (EMS) is not available for list customers.

	<u>MRC</u>
Per line	\$25.00
Additional Line	25.00

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY**3.2 Service Combination Packages - Residential**

This service is no longer available to new Customers.

(C)

3.2.1 Description

Provides various combinations of services to residential customers for a flat MRC. The MRC does not include the following:

- Charges on previous bills
- Bill adjustments or credits
- Non-Recurring Charges
- Late Payment Charges
- Customer Premises Equipment Charges
- Surcharges and Taxes
- Services provided by other Carriers
- Operator surcharges
- Federal Subscriber Line Charge

Intrastate MTS rates charged in addition to the MRC can be found in Carrier's Tariff No. 1. Interstate, and international rates charged in addition to the MRC can be found in Carrier's Tariff FCC No. 1 and FCC No. 2, respectively. MTS calls eligible for combination package rates and the additional rates for package subscribers are only those direct dialed calls placed over lines presubscribed to Carrier for interLATA calls and for direct dialed calls placed over lines presubscribed to Carrier, or resold, for intraLATA calls. MTS minutes included in a package are aggregated over all lines in the same residence and which are presubscribed to Carrier.

If Customer's bill for all MRC and usage charges for the current month exceeds a specified amount (which varies with each package), Customer will be given a bonus discount on the current bill. Services eligible for the bonus discount include services provided under Carrier's Tariffs No. 1 and 2, FCC No. 1, FCC No. 2, and cellular, paging, and Internet services, and equipment provided by or through Carrier. If Customer discontinues a package plan, the non-package residential rates will apply.

Excluded from eligibility for the bonus discount calculation are charges included on prior bills, NRCs, Internet Browser Software, late payment charges, surcharges and taxes, federal subscriber line charge, billing adjustments and credits, equipment and 900/976 usage charges.

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY**3.2 Service Combination Packages - Residential (Continued)****3.2.1 Description (Continued)**

Carrier offers two types of residential packages in Southwestern Bell territory:

- Standard packages include flat-rate local service with touch tone and unlimited local calling from lines presubscribed to Carrier under a package and in the same residence for calls within customer's local calling scope.
- Extended Metro Service (EMS) packages include an EMS line with unlimited 2-way calling in the Metro calling area. Carrier concurs in the extended area calling scope of the underlying carrier.

In addition, both standard and EMS packages include the following additional features:

A. Combination A - Package includes the following:

60 minutes of direct dialed (1+) intrastate and/or interstate MTS usage aggregated across all presubscribed line(s) on Customer's account. Customers qualifying for Tel-Assistance are eligible for Package A at a discounted rate.

B. Combination B - Package includes the following:

One Standard Call Management Feature and One Premium Call Management Feature or Two Standard Call Management Features

100 minutes of direct dialed (1+) intrastate and/or interstate MTS usage aggregated across all presubscribed line(s) on Customer's account.

C. Combination C - Package includes the following:

One Standard Call Management Feature and One Premium Call Management Feature or Two Standard Call Management Features

200 minutes of direct dialed (1+) intrastate and/or interstate MTS usage aggregated across all presubscribed line(s) on Customer's account.

D. Combination D - Package includes the following:

One Standard Call Management Feature and One Premium Call Management Feature or Two Standard Call Management Features

400 minutes of direct dialed (1+) intrastate and/or interstate MTS usage aggregated across all presubscribed line(s) on Customer's account.

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY**3.3 Extended Area Calling Service (EACS) - Residential**

This service is no longer available to new Customers.

(C)

3.3.1 Description

EACS allows the subscriber to increase the local calling area. Optional EACS is a rate additive applied in addition to the service combination package charges established elsewhere in this Section. Optional EACS is only available to customers subscribing to a package. Carrier concurs in the extended area calling scope of the underlying carrier including the establishment of optional service along with the application of one-way and two-way extended area calling scopes.

In cases where a single working telephone number is used for multiple lines, if EACS is subscribed to, it must be purchased for all lines.

Optional EACS is not available with Tel-Assistance.

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY**3.8 Centrex Service**

This service is no longer available to new Customers.

(C)

3.8.1 Description

This service provides communication channels to the Public Switched Network which can be used to place or receive one phone call at a time. In addition, Centrex provides customers with access to PBX-type features (i.e., call forwarding) which can be applied directly to their telephone equipment or can be activated on an as needed basis from the individual telephone set. There are two types of Centrex Lines: Basic and Express Service. To achieve the level of functionality Centrex offers, the customer must order a minimum of two lines of Basic or Express Centrex service.

A. Basic Centrex Lines include the following standard features:

- Automatic Call Back
- Automatic Identification of Outward Dial
- Call Forwarding
- Call Hold
- Call Pick-up
- Call Transfer-All Calls
- Call Waiting
- Consultation Hold
- Dial Call Waiting
- Direct Inward Dialing (DID)

3.8.2 Rates

Centrex pricing is calculated by adding the Centrex Primary Analog Station Lines and the Centrex Station Line Facility to Individual Optional Features and Network Access Registers to derive the total MRC rate. In addition to the MRC rates, one-time installation charges apply in certain situations. There are specific methods for applying the rates.

Rates applied per System - Applied to the Customer group.

Rates applied per Station Line - Applied to each telephone or station line which is in the System.

Rates applied per Station Equipped - Applied only to the station lines equipped with this optional feature individually.

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY

3.11 Extended Area Calling Service (EACS) - Applies to Business Flat Rate Service, Centrex, ISDN, and PBX services.

This service is no longer available to new Customers.

(C)

3.11.1 Description

EACS allows the subscriber to increase the local calling area. EACS is a rate additive applied in addition to the service combination package or line rates established in Section 3. Optional EACS is only available to customers purchasing a service combination package and/or who establish a term agreement for services with the Carrier. For mandatory EACS, the service is available on service combination packages, term agreements or month-to-month billing as a additive to the charges. Carrier concurs in the extended area calling scope of the underlying carrier including the establishment of mandatory and optional service along with the application of one-way and two-way extended area calling scopes.

In cases where a single working telephone number is used for multiple lines, EACS must be purchased for all lines. If one line in a rotary hunting arrangement has two-way EACS, all lines must have two-way EACS.

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY**3.14 Frame Relay Service**

This service is no longer available to new customers.

3.14.1 Description of Service

Frame Relay Service is a high-performance, cost effective data offering for connectivity of multiple local area networks (LANs) or Systems Network Architecture (SNA) locations. Frame Relay Service uses shared facilities and statistical multiplexing to transport data communications (packets). Frame Relay Service delivers bandwidth-on-demand internet working connections, providing speeds up to 1.536 Mbps. It is ideal for intensive, bursty data transmission applications.

Dedicated access facilities provide access to the frame relay network through ports on a frame relay switch. Connectivity to the frame relay network is provided through permanent virtual circuits (PVCs) which provide logical software connections for communications between ports on the network. Multiple PVCs can be defined on any given port providing a single access line the capability to transmit data to multiple destinations.

3.14.2 Rate Elements

The primary components to Frame Relay Service are:

- Local Access Facility (dedicated)
 - Port
 - Permanent Virtual Circuit (PVC)
 - Link Extension
 - Network Link
- A. Access Facility - Customers may access the frame relay network at speeds ranging from 56 Kbps (DS0) to 1.536 Mbps (DS-1) digital facilities.
- B. Frame Relay Port - The frame relay port provides the physical connection between the local access facility and the frame relay network. The port also provides the logical termination of the PVCs assigned to the port. The port speed provides the maximum (burst) speed for which Customer is capable of sending or receiving information through an individual port. Customers select a speed for each frame relay port ranging from 56 Kbps to 1.536 Mbps. The sum of the individual PVCs speed can not exceed the port speed. The port speed must be large enough to accommodate the cumulative egress of all PVCs connected to the port.

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY**3.14 Frame Relay Service (Continued)****3.14.2 Rate Elements (Continued)**

- C. Link Extensions - A customer served by an office located outside of an established Southwestern Bell's Primary Market Area, but within the same LATA, will be required to order a link extension in addition to the port and access. The link extension will consist of interoffice transport between the customer's serving central office and the nearest frame relay capable serving office.
- D. Network Link - A customer will be required to order a Network Link when connection between two of Southwestern Bell's Primary Market Areas, within the same LATA, is being requested.
- E. Permanent Virtual Circuit (PVC) and Committed Information Rate (CIR) - The Data Link Connection Identifier (DLCI) is one of two address points required to establish a PVC. The PVC provides the logical dedicated communications path (circuit) between two ports. PVCs are predefined for each pair of end point devices so a virtual network path (circuit) is always available without call set-up delay. This results in faster access to the network, better response time for end user applications, and a high degree of network security.

A Committed Information Rate (CIR) is assigned to each PVC. The CIR defines the average minimum data transmission rate the network will allocate to the PVC under normal operating conditions. The data transmission rate for a PVC can exceed the CIR when excess capacity is available on the port and on the network. When excess capacity exists, an average data rate above the CIR may be achieved up to the port capacity. Data sent across a virtual connection in excess of the connection's CIR will be marked by the network as being discard eligible in event of network congestion, and will be delivered only if the instantaneous demand for the output on the transmission channel is equal to or less than the capacity of the queue for that channel.

For Southwestern Bell territory customers, CIR is set at full port and access speed.

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY

3.14 Frame Relay Service (Continued)

3.14.3 Reserved For Future Use

3.14.4 Additional Terms and Conditions of Service

Frame Relay Service is provided where facilities and operating conditions permit and where technically feasible.

Customer must give Carrier 30 days prior written notice to terminate Frame Relay Service, however, if under term plan, termination liability charges may apply.

3.14.5 Rates and Charges

Customer may purchase service as a combined local access and port element, plus the DLCI element from Carrier.

A. Port and Access

Charges include a Non-Recurring Charge (NRC) and a Monthly Recurring Charge (MRC), based on the type of access line utilized. Charges are per access facility, and include the local access and port charges. NRCs are waived for three and five year term commitments.

1.	NRC			
	<u>Speed</u>	<u>First Unit</u>	<u>Addl Units</u>	
	56/64 Kbps	\$378.00	\$290.00	
	384 Kbps	620.00	425.00

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY**3.15 Private Line Service**

This service is no longer available to new customers.

3.15.1 Description - Private Line service provides dedicated communications channels for voice and data services. The service provides point-to-point connections through non-switched, non-usage sensitive dedicated facilities for a specific customer. Communications channels vary from voice grade through high speed for the various types of private lines. A minimum service period of 6 months is required on all private line circuits.

A. Digital Data Service (DDS)

Digital Data Service provides low speed digital transmission over a dedicated private line. Typically, customers use the service for transmitting lower speed data for point-to-point or multi-point transmission. Similar to Voice Grade private lines, DDS Customers may order various features including bridging and conditioning. Conditioning is often required by a customer for improving the quality of data transmission so that there are fewer errors that may effect the quality of transmission. Digital Data Service is offered on a month to month, 1 year, 3 year and 5 year plan.

B. DS-1Private Lines

DS-1s provide dedicated, non-switched point-to-point or multi-point high speed transmission at 1.544 Mbps. These services are typically used for high speed data transmission and may be used for voice transmission, in which circumstances it would be multiplexed. Similar to DDS, DS-1 customers often purchase optional features such as multiplexing. DS-1 is offered on a month to month, 1 year, 3 year, and 5 year plan.

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY**3.16 Integrated Services Digital Network (ISDN) Basic Rate Interface (BRI)**

This service is no longer available to new Customers.

(C)

3.16.1 General Description

ISDN BRI will be available on February 13, 1998.

ISDN BRI is a central office based service, which consists of two 64 Kbps "B"-channels and one 16 Kbps "D"- channel terminated in a "U" interface at the customer point of demarcation. ISDN BRI supports simultaneous transmission of voice and data services on the same exchange access line.

B-channel circuit switched services offer up to 64 Kbps intra-office transmission of voice or data on a per call basis. Transmission on the B-channel will be circuit switched at 64 Kbps between ISDN compatible central offices connected with appropriate facilities. ISDN interconnection to non-ISDN equipped central offices will be potentially subjected to analog transmission or sub-rated to 56 Kbps. Each ISDN BRI service is comprised of an exchange line and ISDN BRI access. The B-channels can be arranged for circuit switched voice and/or data calls; the D-channel is arranged only for signaling. All directory numbers associated with a single ISDN BRI service must presubscribe to the same Carrier. Access to other service providers will be via dial-around.

Transmission of packet data on either the D-channel or the B-channel is not available. Customer may originate or receive circuit-switched voice calls from either inside or outside the serving central office of their local calling area. Where facilities are available, customers will be able to originate and receive circuit-switched data calls outside their serving central office. When Customer's serving central office is not equipped for ISDN, Customer may be served with ISDN from another central office. Customer must agree that the service will be moved back, with a probable number change, to his home serving office once it is equipped. When Carrier elects to use this serving arrangement, extension charges do not apply. Should Customer request to be served from an ISDN equipped office other than the home serving office, appropriate extension charges will apply.

Service is offered subject to availability in the particular central office from which Customer is served, and is limited to where facilities and appropriate technology exist. ISDN BRI service will be provided at the rates contained in this tariff section, provided facilities are available. Where facilities are not available or unusual expenditures are involved in making them available, the customer may be required to pay additional charges to cover the unusual expenditure, or to contract for services beyond the service term or both. ISDN compatible customer premises terminal equipment is required for proper operation. It is the Customer's responsibility to provide necessary power and obtain such equipment.

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY**3.16 Integrated Services Digital Network (ISDN) Basic Rate Interface (BRI)****3.16.1 General Description (Continued)**

Due to technical limitations, some analog optional features (such as, but not limited to, Call Waiting) may not work properly when a customer chooses to combine an analog local exchange access service with a ISDN BRI service arrangement.

Service is offered under a month-to-month term and a one year term. If Customer terminates the service prior to end of the minimum period, Customer will be charged for the balance of the amount that is due for the remainder of the term.

ISDN-BRI may not be the primary line to a residence.

3.16.2 Rate Structure

ISDN BRI consists of four (4) basic rate elements:
ISDN Basic Rate Interface
Two (2) B-Channels
ISDN BRI optional features
Non-Recurring charges (NRCs)

NRCs are in addition to any applicable service charge for moves, changes, and/or installation provided for in other sections of this tariff.

3.16.3 ISDN BRI Definitions and Feature Descriptions

Additional Call Offerings - A non-MBKS feature that notifies the user of an additional circuit switched voice call that would normally be cleared because the user's interface is busy.

Audible Message Waiting - Provides the user of a Messaging service an intermittent dial tone when a message is waiting.

"B"-channel - A 64 kbps path used for circuit switched voice (CSV) or circuit switched data (CSD) from end-user to end-user.

Basic Rate Interface Line Capacity (2B+D) - Two 64 kilobits per second (kbps) "B" channels and one 16 kbps "D" channel.

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY**3.16 Integrated Services Digital Network (ISDN) Basic Rate Interface (BRI)****3.16.3 ISDN BRI Definitions and Feature Descriptions (Continued)**

Call Forwarding Busy Line - Automatically routes calls to a preselected directory number when the called line is busy.

Call Forwarding Don't Answer - Automatically routes calls to a preselected directory number when the called line does not answer within a preset ringing cycle.

Call Forwarding Variable - Allows the ISDN user the ability to forward all incoming calls to a user specified directory number. An access code is used to activate this feature.

Call Number Delivery - This feature provides the customer who is receiving a call with the Telephone number of the calling party.

Call Pick-up - Allows a user to answer calls directed to another line in the same preset Call Pick-up Group.

Call Selector - Provides a distinctive ring to the subscribing customer for up to six specific telephone numbers.

Conference - Allows the user to add a third party to an existing conversation and may be used with voice calls only.

"D"-channel - A 16 kbps path used for signaling purposes only.

Drop - Allows the user to disconnect the last party added to a conference call.

Foreign Serving Office Inter-Office Facility - Provides for the transmission facilities between the customer's normal service office and the ISDN serving office.

Hold - Allows the user to place a call on hold.

Link Extension Equipment - The additional Central Office equipment required to provide ISDN-BRI service to a customer located outside a service area.

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY**3.16 Integrated Services Digital Network (ISDN) Basic Rate Interface (BRI)****3.16.3 ISDN BRI Definitions and Feature Descriptions (Continued)**

Link Extension Facility - The additional facility required to provide ISDN-BRI service to a customer outside a service area.

Multiline Hunting - Provides for a predefined search for an idle directory number to which a call can be completed. Directory numbers subscribing to this service may not have multiple call appearances.

Primary Directory Number (PDN) - The "single" telephone number provided to "B"-channel.

Remote Call forwarding - This feature allows a user at a remote location to activate/deactivate the Call Forwarding feature. Call Forwarding is activated using remote access.

Repeat Dialing - When activated, automatically redials the last number the customer attempted to call. If the called line is not busy, the call will be placed. If the line is busy, a 30 minute queuing interval begins and if the line becomes idle during this time the user is alerted and the call placed.

Secondary Directory Number (SDN) - A telephone number purchased by the customer which is in addition to the PDN for a "B"-channel.

Selective Call Forwarding - This feature allows a user to forward selected calls to another telephone number.

Selective Call Rejection - This feature allows a user to reject calls from up to six different telephone numbers.

Six Way Conference - A circuit switched voice option that allows the user to set up a conference call for up to six parties.

Speed Calling - Allows the user to assign telephone numbers to a one or two-digit code for abbreviated dialing.

SECTION 3 - SERVICES IN SOUTHWESTERN BELL TERRITORY**3.16 Integrated Services Digital Network (ISDN) Basic Rate Interface (BRI)****3.16.3 ISDN BRI Definitions and Feature Descriptions (Continued)**

Visual Message Waiting Indicator - Provides the user of a Messaging service with compatible equipment a visual indication that a message is waiting.

Multibutton Key System (MBKS) Features - Feature Function Buttons on the MBKS set can be assigned to activate certain features. Indicator lights show the activation or deactivation status of the features. The number of function buttons is dependent on the MBKS set design.

Analog Shared Directory Number - Allows analog lines that are served from the same central office switch as the ISDN BRI line to be assigned to a button of a MBKS set.

Drop - Allows the MBKS set user to drop the last party added to a conference call.

Hold - Allows the MBKS set user to place a call on hold by pressing the function button.

Multiple Directory Number Buttons - Provide access to more than one directory number on the MBKS set.

Additional Call Appearances - Allows multiple call appearances for directory numbers per MBKS set.

Call Forwarding Variable - Allows the ISDN user the ability to forward all incoming calls to a user specified directory number.

Call Forwarding Busy Line - Automatically routes calls to a preselected directory number when the called line is busy.

Call Forwarding Don't Answer - Automatically routes calls to a preselected directory number when the called line does not answer within a preset ringing cycle.

Conference - Allows the user to add a third party to an existing conversation and may be used with voice calls only.

Transfer - Allows the user to transfer a voice call to another directory number if the user has a vacant call appearance or directory number.
