Description of the Planned Network Change(s):

Verizon intends to retire the copper facilities at all remaining locations in the sixteen (16) wire centers listed above. The copper facilities being retired supported services dependent on obsolete time-division multiplexing and used SS7 signaling. The vast majority of affected locations will have access to fixed or mobile wireless voice or broadband service from multiple providers - including Verizon Wireless - or another wireline option, including VoIP service from Verizon Delaware or a cable company.

Description of Reasonably Foreseeable Impact(s) of the Planned Change(s):

After the retirement of the copper facilities, Verizon will: (1) no longer offer services over copper facilities; and (2) cease maintaining the copper facilities. To help ensure an orderly transition, Verizon may require customers and interconnecting entities to migrate services off of copper facilities well before the copper retirement implementation date.
