

Transforming government, one solution at a time.

Networkx solutions from Verizon

Government agencies are facing more demands as new executive priorities must be addressed, agency-wide initiatives need to be supported and a growing number of regulatory requirements must be met. This translates into a number of network management challenges for federal chief information officers (CIOs) and their staffs. Information technology (IT) infrastructure may need to be consolidated, standardized and modernized to meet security mandates – such as the Trusted Internet Connections (TIC) initiative. Agencies also need to transform their communications capabilities, improve operational efficiencies and contain costs.

Addressing these challenges can be complicated – but with Networkx solutions from Verizon, it doesn't need to be.

Experience you can trust.

Verizon has more than 25 years of experience working with federal agencies to solve complex IT, security and communications challenges. We're the largest provider of communications services to the US federal government and one of the largest global providers of IT, security, communications and network solutions to government agencies and businesses – including 99% of the Fortune 1,000.

Our long history of providing services through major procurement programs and as a prime contractor under Networkx, means we can provide you with high-level solutions to support your agency's mission.

A high-value, low-risk choice.

When you're looking for a low-risk alternative to meeting your agency's transformation needs, we can help. We've worked with the US federal government to successfully transition some of the largest and most complex agency networks in the world. Our experts can do the same for you – at a competitive price.

Not only do we provide leading-edge technology solutions, but we also are committed to helping you improve your return on investment by continuing to deliver extraordinary value.

Leadership you can count on.

As you navigate the path to support a more mobile workforce, enable complex applications and defend against sophisticated cyber threats, it helps to have a trusted partner at your side. We help agencies prepare for growth by providing mobility, networking and security solutions to solve real challenges and drive powerful outcomes.

We're recognized by industry analyst firm Gartner as a Leader in its Magic Quadrant reports for 2019 Network Services, Global, and 2019 Managed Security Services, Worldwide. We're also the only telecommunications company in the world to be named a Leader in both the Magic Quadrant for Network Services, Global, and the Magic Quadrant for MSS, Worldwide – a position we've maintained for three straight years. Additionally, we received some of the top scores in Gartner's 2019 Critical Capabilities for Network Services, Global report.

Our capabilities

13 years in a row as a Leader in Gartner Magic Quadrant Network Services, Global¹

7 years in a row as a Leader in Gartner Magic Quadrant Managed Security Services, Worldwide²

3 years in a row as the only telecommunications company named a Leader in both Magic Quadrant for Network Services, Global, and Magic Quadrant for MSS, Worldwide³

You're committed to your mission and to meeting the needs of citizens. Verizon strives to match that commitment every day, with the best possible technology solutions to meet your needs. That's one reason we've been named a Top 100 Government Contractor by Washington Technology.

Secure your agency from ever-evolving cybersecurity threats.

An effective security solution isn't built by bolting security products onto an existing infrastructure; it requires a thoughtful, integrated plan. That's why we can combine our full suite of security services with Networx solutions. This helps keep you ahead of the threat curve with intelligence-driven capabilities to assess risk and manage vulnerabilities, as well as helps you address regulatory requirements like TIC by implementing solutions such as Managed Trusted Internet Protocol Services (MTIPS).

Many of our security solutions are managed through our Government Network Operations and Security Center (GNOSC). Built specifically to handle the security demands of Networx, this state-of-the-art facility in northern Virginia supports managed network services for a variety of federal government agencies. The facility includes a network monitoring and security center, emergency command center, biometric scanning for building access, climate control for equipment, and network redundancy to help maintain uninterrupted service, even during a catastrophic event.

Be prepared when your mission goes mobile.

Government business isn't limited to Washington, DC. You have to connect and collaborate with agencies, officials, employees, allies, partners and suppliers around the world.

Verizon owns and operates one of the largest facilities-based networks worldwide. With our extensive global reach, you'll be able to connect with your destinations reliably and securely. Because we are one of the first network providers to deploy seven-way mesh technology across the Atlantic and Pacific – which provides multiple diverse paths for voice and data traffic – those connections will be more reliable than ever before.

Solutions tailored to your agency needs.

No two agencies are exactly alike. We believe your solutions should be unique as well. Our comprehensive portfolio of products and services – many provided with leading technology providers – offer different levels of delivery and management. From a complete outsourcing engagement to self-service solutions, our products and services can be combined in ways that allow us to go beyond a one-size-fits-all approach to deliver solutions tailored to your agency needs.

We offer:

- IP-based services
- Managed security services
- Management and application services
- Access services – multiple partners
- Telecommunications services
- Satellite and wireless services

Why Verizon

Verizon works relentlessly to understand agency needs. We reach across divisions and silos, helping organizations at every step to apply tomorrow's technology solutions to today's most pressing challenges. Working collaboratively with our customers and their teams across functions, we help to efficiently and securely integrate digital into their operations.

Our goal is to deliver the promise of the digital world by enabling people, businesses and society to innovate and drive positive change. Federal agencies choose to partner with Verizon because we possess the right technology and expertise to transform their departments, helping them move from legacy, analog organizations to nimble, digital disruptors. When our mission aligns with agency goals, amazing things can happen.

Let us show you why.
