

Catch the replay to hear how to plan for and navigate the most significant update to the Payment Card Industry Data Security Standard since its initial release.

Security professionals know that compliance requires focus, prioritization and alignment. Nowhere is that more true than in regard to the latest update to the Payment Card Industry Data Security Standard (PCI DSS).

It's the most significant update since the Standard's initial release in 2004. That can feel overwhelming to fully digest.

During this discussion, Ciske van Oosten, Verizon Head of Global Business Intelligence, and Satnam Bhogal, Verizon Managing Principal Consultant, sit down with Sam Junkin, Associate Director of Professional Services, to talk about the implications of the update, and how a systematic strategy can relieve complications while driving consistency and confidence.

You'll hear about:

- The largest changes coming with PCI DSS 4.0, including new customized and compensating control options
- Top challenges associated with the update, including interpreting standards, proving continuous compliance and adhering to stricter measurement and reporting
- How to create a manageable preparedness strategy focusing on goals and objectives, resource alignment, stakeholder involvement, timeline guidance and compliance

"We recommend designing your program around five major milestones (interpretation of the Standard, business impact analysis, gap assessment, preassessment, formal assessment)."

Ciske van Oosten

Ciske van Oosten Head of Global Business Intelligence, Verizon

Satnam Bhogal Managing Principal Consultant, Verizon

Host: Sam Junkin Associate Director of Professional Services

The panel provides valuable insights.*

"Understanding the new control guidance is very important, and should be the first step that an organization should take – make the best use of the first half of 2022 to understand them." – Satnam Bhogal

"The challenge with PCI security is proficiency, and focus... It requires preparation and really skillful design, if you're going to have success in a predictable manner." — Ciske van Oosten

"Organizations should not underestimate how much work and effort goes into preparation. This means improving the process, procedures, and having a high quality of compliance evidence." — Satnam Bhogal

"You will have to show that continuous compliance is truly continuous – you can no longer say 'well we got these in place two weeks before the validation assessment.' Now, that may result in a failure of compliance validation."

- Ciske van Oosten
