

Reliable agency communications. Right out of the box.

Virtual Communications Express for Government.

The public sector workplace is rapidly changing. The GSA's Enterprise Infrastructure Solutions Contract and numerous federal directives like the Telework Enhancement Act and the Presidential Cloud First Policy, challenge the federal government to keep pace with technological change in the private sector and quite frankly with the expectations of the US population. Customers need to access services through mobile devices and multiple technologies. Workers want to be mobile and telework. Crises such as natural disasters and terrorist disruptions seem to be more frequent, so business continuity options are crucial to your agency's operations. A highly reliable, feature rich and secure cloud based communications platform is core to delivering on these requirements.

Virtual Communications Express for Government helps improve productivity and constituent services while you control costs.

Most federal agencies understand they need basic communications to reach mission goals. Federal IT resources are moving away from independent point solutions and moving to centralized platform based solutions.

Virtual Communications Express for Government (VCE) gives you a simple and reliable way to get the communication technology you need. It provides today's federal, state, and local governments with the secure, carrier-class platform they require. That way, you can focus achieving your mission objectives.

VCE offers advanced communications features, enabling public sector workers with powerful tools to communicate and collaborate inter and intra-agency, from devices and networks they choose. The simple install options get new locations and new employees up and running quickly.

Your workforce can get the benefits and efficiency of unified communications and have access to leading applications and self-service tools.

VCE for Government reduces the effort, complexity and risk of managing your communications technology.

Verizon's Unified Communications (UC) solution is easy to install and activate – without UC IT specialist. Out of the box, it can help provide communications across your Federal Agency.

VCE for Government offers:

- Hosted IP Voice Services (IPVS)
- Modular feature additions for unified communications
- Utilizes Verizon's Private IP Network
- Predictable cost control with unlimited local and domestic long-distance voice calling
- Carrier-grade cloud unified communication with FedRAMP compliance
- Integration of instant messaging and phone presence
- Available audio and video conferencing, desktop sharing
- Business continuity features
- Around-the-clock online training, support, billing access and self-service

Professional communications help you deliver excellent public service.

VCE is a simplified, cost effective unified communications solution offering cost control and strong security. Agencies can see productivity rise and gain insightful analytics, to better manage staffing and measure performance across multiple agency locations.

VCE is complimented by Verizon's broad range of products – as well as our excellent maintenance, support and service. It quickly and easily unifies your communications approach while controlling costs. With VCE you can quickly and easily implement a single cloud based UC strategy, align with compliance needs, adapt to changing demands and control costs.
