Introduction

TechSee bridges the visual gap between you and Verizon Network Operation Centers.

It enables Verizon experts to guide you directly during equipment checks using a live video stream.

TechSee can help repair faults faster and there is often no requirement to have a technician on your site to troubleshoot.

How does it work?

TechSee uses advanced technologies to identify your mobile device by setting up a remote visual session via an SMS sent to you. You can then share the visual status of your equipment via your smartphone camera, using browser-based technology, which does not require an application download.

It enables the Verizon technician to give effective guidance as if they were standing right next to you. The Verizon technician becomes a virtual technician on your site:
Security

TechSee does not store any recordings or images during the session, the communication is only between you and the Verizon technician. All data transfers use a secure encrypted channel (TLSv1.2+).

Only authorized Verizon personnel can send you an SMS invitation to join the video session and only after verbal permission from you.

Starting a TechSee Live Session

Step 1:
The technician will invite you by sending an SMS to your smartphone.

Step 2:
You will receive an SMS with the link https://verizon.techsee.me as shown here:
Step 3:
Once you click on the link, you will be asked to tap the Allow button:

![Allow button](image)

By tapping the Allow button you agree that Verizon may monitor and record the images and videos sent using TechSee to ensure quality service. You also agree to the TechSee Terms of Service.

Step 4:
Next you will be asked to give permission to access your mobile phone’s camera. Click on Allow.

![Permission dialog](image)

verizon.techsee.me wants to use your camera

Block  Allow
Step 5:

At this stage you can start sharing visuals of your equipment with the Verizon technician from your mobile device. The technician will see what you see on your mobile and can directly guide you through additional checks.

During this video session, the technician can use a pointer to indicate what you need to do, where a cable should be inserted or similar. You will see the pointer on the screen of your mobile device:

During this video session, the technician can also capture an image to provide further instructions.

When connectivity is too weak to support a video stream, the Verizon technician can use your camera to take pictures instead.
Customer Training and User Guides

Service Assurance User Guides

Documents can be found on the Service Assurance User Guides page. The latest version of this document can be always found here.

General Customer Training Information

Go to our Customer Training Portal* to enroll in training or to download other user and reference guides.

*Registration is required

Verizon Enterprise Center

The Verizon Enterprise Center portal is an easily accessible tool that offers customers the possibility of raising inquiries and managing different requests online.

What is it for?

The Verizon Enterprise Center portal supports customers with Repair related technical issues via repair tickets as well as customers with Invoice inquiries and Account Management requests, offering an alternative to emails and phone calls.

Related documents

Related documents and guides can be found on the Verizon Enterprise Center Commercial User Guides* page (follow the menu path User/Reference Guides > Verizon Enterprise Center).
