

# Take a comprehensive, unified approach to managing mobility.

Verizon MDM

verizon✓

## As an IT admin, you have to track and manage an ever-increasing number of mobile devices and operating systems connecting to your networks.

With the number of headlines about data security breaches increasing as well, you need powerful MDM resources to mitigate risk across your business. These are critical responsibilities, as more and more employees get work done on the go and virtually anywhere – sometimes in the most vulnerable environments.

Verizon MDM provides enterprise firmware-over-the-air (FOTA) management, device diagnostics, broadband hotspot management and unified endpoint management (UEM) services to help you effectively manage mobility, streamline operations and boost continuity.

**Verizon MDM helps you take control of mobile environments from the network to devices and hotspots to every endpoint.**

## Get a lot more than an average MDM solution.

We offer unique capabilities in one solution, some of which aren't available from any other carrier or provider:

### Single user interface

Centrally manage all your devices and access device diagnostics 24/7 on a single, unified portal.

### Enterprise FOTA

Schedule, deploy, postpone and track firmware updates on employee and corporate devices.<sup>1</sup>

### Device diagnostics

Access online, near real-time technical device data to improve device troubleshooting and avoid costly downtime.<sup>2</sup>

### Broadband hotspot management

Control security profiles, policies and settings on select Jetpack® mobile hotspot and USB devices.

### Unified endpoint management

Manage, configure and protect mobile devices running Android™ and iOS.

## Balance the benefits of mobility with advanced device management.

Let employees be free to use their mobile and endpoint devices where they want, while not sacrificing strong data security. Our MDM solution helps you:

- **Minimize risk.** Spot devices that aren't in compliance, have been rooted or contain high-risk applications.
- **Stay cost-effective.** Manage device diagnostics and software updates from a single portal without investing in hardware or software.
- **Improve availability.** Boost uptime by preventing and diagnosing issues before they can become bigger problems.
- **Be ready for the future.** Use a software-as-a-service solution that will continue to add new and enhanced services and device support.
- **Deliver a simplified strategy.** Operate through a centralized management portal to streamline how you administer services across your organization.

**Experience the combined power of MDM and UEM.**

By integrating our MDM solution with UEM services in a single management portal, you can remotely provision, control and secure devices like smartphones, tablets and mobile hotspots. This makes it easier to protect devices and critical data used by every mobile or remote worker across your business.

**Learn more.**

For more information about Verizon MDM, please contact your Verizon Wireless business specialist or visit [verizonenterprise.com/contact-us](https://www.verizonenterprise.com/contact-us).

<sup>1</sup> FOTA supports Android devices, including Jetpack mobile hotspot devices and USBs, with the exception of Google Experience devices.

<sup>2</sup> Device diagnostics support Verizon Android devices operating on OS 4.0 or higher.
