

Boost your bandwidth with internet you can trust.

Internet Dedicated Services from Verizon: Reliable, lightning fast and backed by stringent SLAs

Your business deserves internet you can count on for consistent speeds and greater agility. With Internet Dedicated Services from Verizon, you can maintain high performance of your network applications and ease your path to the cloud. At the same time, you can deliver exceptional web experiences to your colleagues and customers. Need high internet availability? How about the competitive advantages relative to productivity that can come with high-bandwidth access? We can help get you there—and keep your business ready—with our dedicated internet solution.

The high-performance internet you need for mission-critical applications depends on high speed and reliable, robust and secure connectivity.

Enable greater productivity.

You need an internet connection that helps you hit your business targets. With one of the world's most connected IP networks, we have the dedicated internet access you need. You can count on fast, simple, secure and reliable connectivity.

Your productivity and competitive position can benefit from:

- Scalable bandwidth
- Support for secure protocols
- Quality-of-service (QoS) performance options
- Competitive SLA options

Align your internet with your business.

Your business has unique requirements, and we're committed to working with you to provide the right mix of services. You can get high-speed access while streamlining your networking needs with a wide range of bandwidth options and cost-effective connectivity choices.

Customize your bandwidth options.

With any business, costs matter. To help you get the most from our dedicated internet, we offer choices for a variety of bandwidth options and flexible billing plans. For example, you can opt for:

Burstable select

Get consistent bandwidth per month with access to the service's full potential.

Tiered

Get a flat monthly price based on the bandwidth tier you select, with bandwidth capped at your chosen level.

Broadband Pro¹

Get cost-effective, flat monthly pricing for best-effort bandwidth (300 Mbps and 1 Gbps).

Managed Internet Services

Get global around-the-clock monitoring and management of your networks and premises equipment with Verizon's Managed Wide Area Network (MWAN) service. This service is supported on multiple WAN services and is independent of network access. Businesses that currently manage their own equipment can choose to turn over that responsibility to Verizon through our Managed Takeover process.

Enhanced QoS² and security

When you move voice, video and other key business applications onto a dedicated IP network, you want peace of mind that service quality meets your expectations.

Our dedicated internet solution allows you to prioritize key applications or different types of network traffic based on degrees of importance. For example, you can give network traffic for high-definition video a higher priority than other traffic that you don't consider as important.

You also can add additional layers of security with the option to use our Managed Security Services in the cloud. These managed services provide firewall, distributed-denial-of-service (DDoS) attack protection and other defense services for an additional charge.

Protection from DDoS attacks

A DDoS attack is a flood of internet traffic, often originating from thousands of infected devices, which can overwhelm your systems and network capacity, rendering them unavailable to those who need it most: your customers, partners and employees. Avoid potential outages and mitigate the risk of downtime with DDoS Security, a cloud-based DDoS protection service that will quickly mitigate large or small attacks that target your network.

Secure your network.

You can also add additional layers of security to your Internet Dedicated Services. With superior security intelligence and decades of experience, we can help defend the perimeter, monitor and manage your infrastructure, and offer emergency breach response and security consulting services.

Connect users to applications simply, securely and reliably.

Why Verizon

It's amazing the things technology can do. When companies take advantage of technology, they don't just drive business, they can change the world. Discover how Verizon can help your organization increase productivity, improve the efficiency of your communications and control costs. Our dedicated internet solution gives you powerful and reliable internet connections that deliver speed and enable greater productivity.
