

BlueJeans Gateway for Microsoft Teams

Connect existing room systems to Microsoft Teams meetings with cloud-native video interoperability

Flyer

Reimagine your workspaces.

BlueJeans Gateway for Microsoft Teams® is the cloud video interoperability solution that lets you unleash the full power of Teams by connecting people together for productive meetings as they start using boardrooms, conference rooms and huddle spaces once again.

Overcome the challenges of connecting room systems to Microsoft Teams.

With BlueJeans Gateway, you can offer a consistent meeting experience for your end users—regardless of room system hardware. That's because BlueJeans' all-inclusive solution provides everything you need to run Microsoft Teams meetings on your existing room systems.

Optimized meeting experience

Content sharing and flexible screen layouts give end users control over their meeting experience and the ability to select the best video layout for their meetings.

Infinite cloud capacity

Because BlueJeans Gateway is hosted in Microsoft® Azure®—Microsoft's enterprise-grade cloud computing infrastructure—it supports massive scale.

Pure SaaS

Unlike other solutions, BlueJeans Gateway's software-as-a-service (SaaS) model helps you be more productive with automated updates, centralized management and better visibility across all of your rooms for faster troubleshooting. BlueJeans' pure SaaS solution interoperates with thousands of room system configurations like Cisco, Polycom and Lifesize, making the most of your existing hardware investments and giving you ultimate flexibility.

Single-touch join experience

End users will thank you for making ease of use a priority. BlueJeans Gateway supports single-touch join via native touch screens from vendors like Cisco and Polycom—as well as iOS devices and Android® tablets—so participants can focus on the purpose of their meetings, not on managing them.

Show up with BlueJeans Gateway.

Now you can unlock the full collaborative power of Microsoft Teams by turning any conference room or huddle space into an easy-to-use, modern video-conference room.
