

Browser Security powered by Check Point

Available through the Verizon Business Marketplace.

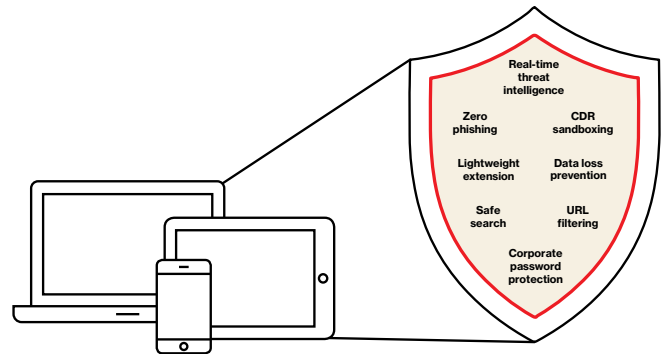

Why Verizon Business Marketplace?

A smarter way to buy network and security solutions. Helps streamline your tech stack with a platform designed for modern business needs.

- **The all-in-one advantage:** A true one-stop destination for quick, reliable and secure networking solutions designed to help your essential daily operations.
- **Seamless compatibility:** Curated network solutions to help ensure smooth integration across your network.
- **Administrative ease:** Help reduce overhead with unified network vendor management and a single bill.
- **Effortless procurement:** Help simplify how you find, buy and deploy the networking tools your team needs to get work done.

Maximum protection, minimum presence

What is Browser Security?

Check Point's AI Powered Browser Security provides unparalleled threat prevention at the browser level. It stops known and unknown web-based threats before they occur, offering advanced protection that goes beyond traditional and endpoint solutions. It provides seamless security without compromising productivity. It is a lightweight extension delivering robust defense without compromising performance. Unlike traditional solutions, Browse Security operates directly within the browser, delivering zero latency and uninterrupted user experience. It requires effortless deployment in any environment providing comprehensive, cloud-delivered protection for all major browsers and both managed and unmanaged devices – without complex IT configurations. It integrates with Check Point products and third-party solutions, offering customizable policies and an intuitive dashboard for streamlined operations. Check Point's Browse Security is cost-effective and scalable protection, reducing total cost of ownership (TCO) and is ideal for businesses of all sizes.

Features

- 🛡️ **Zero phishing:** Check Point's AI-powered Zero Phishing® blocks phishing sites in real time, while URL filtering blocks access to restricted sites based on company policies.
- ⬇️ **Threat Emulation®:** All downloads undergo Threat Emulation® sandboxing and Content Disarm & Reconstruction (CDR) with Threat Extraction®, delivering sanitized files in milliseconds while blocking the NSA's Top 25 CVEs.
- 🔒 **Data loss prevention:** Advanced DLP capabilities protect data shared on the web, including GenAI apps. It provides insight and ensures compliance with data protection regulations while allowing safe use of AI platforms.
- 🔗 **Prevents malicious URL link click:** Browser search results are ranked by safety based on reputation and corporate policy, helping prevent clicks on malicious links and boosting productivity.
- 👤 **Prevents corporate credentials reuse:** Use of corporate credentials on non-corporate websites is blocked, reducing credential-based attacks risks.
