Take advantage of the next generation firewall.

Cisco Meraki Firewall

When it comes to a future-proof solution, the modern business owner already has plenty to worry about. Internet availability, safety and reliability shouldn't be one of those.

You need a solution that updates with evolving threats and provides the insight needed to make smarter, data-based business decisions. One that allows seamless growth and keeps your business and customers online and protected.

By bringing together Verizon and Cisco Meraki, two recognized industry leaders in the IT world, we have created a great solution for your business.

Network Visibility

When thinking about the elements of a modern business, including everything from operations to customer experience, data is king. When you can visualize the user activity and application performance of your network, you can use the data to make smarter business decisions. With this solution, you can identify users' content and application usage on your network, leveraging this information to make informed marketing, sales, and operations decisions.

Business Growth

How prepared is your business to scale and grow? With this solution, the idea of scale is our back-bone. Keeping up with the expectations of your employees and customers is vital, whether that is a reliable and secure WiFi experience, site to site connectivity or general customer experience. We can grow with you and help ensure your business keeps pace with demand.

Modern Approach to Security

You hear it almost everyday in the news, another "hack" or another "bug" effecting businesses of all sizes. Allowing for sensitive customer and employee data to be confiscated by the wrong people. Well, we're here to help. Our solution works both proactively and reactively. It's updated every second with the latest threats from around the globe to keep you protected. Not every firewall solution can say that. Not to mention, it's managed by a team that takes pride in making sure the bad guys never win.

The Best Network for 4G LTE Backup

If your internet goes down, so does your business. Make sure this doesn't happen with the solution's built in 4G LTE backup. When the network goes down, the system automatically leverages the LTE network to keep things running. You also can add additional layers of security with the option to use our Managed Security Services in the cloud. These managed services provide firewall, DDoS and other defense services for an additional charge.

Why Verizon.

It's amazing the things technology can do. When businesses take advantage of technology, they don't just drive business; they can change the world. Discover how Verizon can help your organization increase productivity, improve the efficiency of your communications and control costs.
