

Work from home solution

Enabling a productive remote workforce.

Flyer

Home offices are the new branch office.

Companies want to keep their home based employees productive and help keep their work secure by providing the right internet connectivity and tools. Some companies are reimbursing employees to use their home based internet for work, but for many employees, sharing bandwidth at home can impact their productivity and may introduce security risks. Leaving these network and security decisions up to employees may not be an option.

Simple, easy and secure.

Verizon offers dedicated internet connectivity to home based employees, using a compatible router. Built-in wireless network security controls, including data encryption and network level authentication, help defend against and scammers.

Remote agent

Teleworker

Business continuity

Reliable
