

Stay mission-ready with technology that evolves with your needs.

Wireless business internet to keep the military connected – wherever the mission takes you.

Today's emerging digital technologies stand as fundamental assets in enabling the military and its personnel to operate with greater efficiency and effectiveness. Whether it's bolstering security measures or fortifying internet connectivity for the military, the transformative impact these technologies can offer is endless.

We can help you facilitate a seamless transition from legacy systems and infrastructure toward modernization. Our expertise lies in helping overcome these barriers, enabling the military to harness the power of innovation effectively.

Modernize your network and stay future-ready.

Amid the demand for agile and reliable networks, our wireless business internet stands as a pillar of support to help keep you connected wherever the mission takes you. By helping you modernize your network architecture, we can help pave the way for enhanced scalability, reliability and adaptability to emerging technologies.

Wireless business internet is designed to help operations scale to meet a variety of needs across various locations as your organization's needs grow. With Verizon's high-speed 5G and 4G LTE business internet,¹ you can deliver reliable, secure and affordable connectivity that drives the efficiency, innovation and responsiveness your soldiers, sailors and airmen can count on. Find out how Verizon business internet can help:

Smart base

Partner with us to leverage cloud-based applications, real-time data analytics and remote management solutions that can help optimize processes, improve decision-making and drive the innovation needed to continually improve your

smart base. Our connectivity solution can enable connected devices to help automate critical elements of base security. For instance, cameras and sensors in remote areas can help detect and stop intruders to help keep locations safe, including high-traffic or sensitive areas, such as runways.

Backup connectivity

Have a reliable alternative in place to mitigate the effect of network disruptions or emergencies and save money and time by not having to repair or maintain legacy systems. Wireless business internet can be deployed rapidly as a backup solution, delivering connectivity options—including 5G and 4G LTE networks—and empowering your personnel with redundancy and failover mechanisms to maintain connection continuity during critical situations.

Infrastructure replacement

Don't worry about extensive physical infrastructure upgrades associated with replacing copper cables with fiber-optic lines—wireless business internet uses wireless transmission. By transitioning to this advanced technology, you can help your military facility overcome the limitations of aging copper infrastructure, hard-to-find replacement parts for legacy systems, limited bandwidth and susceptibility to environmental factors.

Situational awareness

You can help enhance the military's situational awareness and operational effectiveness by providing fast and reliable connectivity in remote or dynamic operational environments with our wireless business internet. This advanced connectivity can help access real-time intelligence and enable the integration of advanced technologies such as drones, sensors and surveillance systems, further enhancing the military's ability to monitor and respond to threats effectively.

Why Verizon?

Verizon is uniquely positioned to be the right partner for your continual technology transformation.

Secure and reliable network connectivity

We have built and manage America's most reliable 5G network.² With expertise in public and private networks and with multi-access edge computing, we can help you design and implement the right connectivity solutions for your needs, whether that's highly secure private networks for mission-critical activities or broader connectivity to help improve your operations. Additionally, we continually innovate to help ensure a secure connection with built-in network security controls to help defend against cybercriminals.

Whether you're in one location or many, large or small—wherever the mission takes you—we have fast, secure wireless internet solutions to fit your needs.

Managed and consultative services

Our experts can help you better understand your options, including technical implementation and process management, so you can arrive at custom plans that work well for your needs. Our managed technical services can augment your IT resources, unlocking new capabilities previously unavailable or allowing you to reallocate your essential IT personnel to other mission-critical tasks.

A long history of commitment to the military and government

Verizon has a long history of supporting the U.S. Department of Defense and other federal, state and local agencies, which gives us unique insight into your specific needs. We have more than 8,000 veterans currently employed at Verizon and ranked second place for military friendly companies in 2024.³ So our support is not just from technology experts but from people who understand how they can best help and support you.

Award-winning nationwide wireless business internet

Run your military operations with confidence—all on the network you can rely on.

Embrace the future with confidence.

As you embark on this transformative journey, trust in our unwavering support and expertise. Together, we'll help you navigate the complexities of technological integration so your military organization remains at the forefront of innovation and readiness.

Verizon was awarded the “Best Practices Product Leadership Award” in the U.S. fixed wireless access market by Frost & Sullivan.⁴
