

Bring base life up to speed

Power on-base services and operations with fast, secure commercial connectivity from Verizon business internet.

Challenge

On most military bases, the network does exactly what it was built to do: protect mission-critical communications. But that same design can make it difficult to deliver reliable commercial connectivity for operations on base. This can look like:

- Limited connectivity for on-base businesses, recreation facilities and community spaces
- Slow internet speeds when external access is required
- Costly, time-consuming construction to extend traditional wireline service to more buildings or remote areas
- Few internet options for visitors, vendors and contractors who don't have access to the Department of War (DoW) network

To enable modern services, military bases need connectivity that's equally advanced.

Solution

It's possible to connect bases, services, contractors, on-the-go operations and more – without opening up the DoW network. Verizon 5G Business Internet and Verizon LTE Business Internet provide dedicated, high-speed commercial connectivity on our secure network. Because they are wireless, our business internet solutions are easy to deploy across base and beyond. The result is a separate network that augments your existing infrastructure, for all the ways your base needs to stay connected.

Morale, Welfare and Recreation (MWR) activities

Community spaces, fitness centers, healthcare facilities and other MWR locations are the heart of life on base. Power these vital services with reliable wireless connectivity that helps keep personnel connected and supported.

Recruiter stations

Equip recruiters with the agile connectivity they need to reach prospects – both on and off base. Verizon business internet solutions deliver flexibility that extends their reach, when and where opportunity calls.

Contractor and visitor networking

Provide convenient, secure internet access for nonmilitary personnel. Visitors, vendors and contractors can quickly connect to a dedicated network, keeping primary DoW systems separate.

Command and control offices

Empower command offices with secure access to public internet resources, such as collaboration platforms or partner portals, while keeping core command networks isolated.

Training and education

Elevate training and education programs with our business internet solutions. Instructors, students and trainers can access learning platforms and resources without overburdening the DoW network.

Temporary and remote operations

Stay mission-ready in remote or challenging environments. Verizon business internet solutions are fast to deploy, so you can stand up short-term deployments, field exercises and temporary command posts quickly.

Retail operations

Help support the everyday needs of military personnel with reliable retail connectivity. Verizon business internet solutions enable point-of-sale transactions and commercial activities at Exchange locations, gas stations and base stores.

Benefits

Boost morale.

Reliable connectivity across base keeps personnel connected to meaningful services, enhancing their daily lives and well-being.

Operate with agility.

Rapid deployment and flexible connectivity make it possible to adapt quickly to changing needs and dynamic environments.

Control costs.

Verizon business internet solutions are a smart investment for expanding internet access – without the high costs of traditional wired infrastructure.

Extend coverage.

Robust internet access reaches remote locations, strengthening connectivity in buildings base-wide.

Why Verizon

When it comes to our nation's defense, the stakes couldn't be higher. You can rely on us for commercial connectivity because we have decades of experience serving the DoW and other federal agencies. We understand how to implement technology quickly and efficiently without disrupting your operations. And with turnkey solutions running on America's most reliable 5G network,¹ Verizon can help you advance your mission every day.
