

Help enhance security and simplify access for your business

Managed Identity and Access Management with Accenture

Our modular services can make it easy to control user identities across your business with lightweight efficiency and confidence.

Verizon's Managed IAM with Accenture offering helps simplify access and enhance access security for your business as it scales. Designed for flexibility, it can give businesses control over user identities, enterprise applications and high-risk accounts—without added complexity. Built for businesses of all sizes, our managed approach helps deliver protection without the need for extra IT resources.

Our modular Managed IAM with Accenture suite includes Identity Governance and Administration (IGA), Access Management (AM) and Privileged Access Management (PAM), allowing you to tailor your approach based on current needs and scale over time. IGA streamlines provisioning and approvals with birthright and request-based workflows. AM delivers multifactor authentication and single sign-on across applications, while PAM enforces just-in-time access and aligns with Zero Trust security.

With automation and built-in intelligence, you can reduce manual effort, accelerate onboarding, and gain visibility into user access. Whether you're replacing fragmented tools, responding to a recent security event, or preparing for a controls audit, Verizon's Managed IAM with Accenture can help you move faster and address risk. You'll be able to confidently support your hybrid workforce and evolving IT environment—without having to build and manage it yourself.

This offering brings a sophisticated and purpose-built Fortune 100 proven solution to Verizon's broad network of customers.

Benefits

With the majority of today's breaches rooted in identity access gaps, Verizon's Managed IAM with Accenture offerings are designed to deliver peace of mind while freeing up time for your workforce.

User experience: Help simplify sign-on across business critical applications to help mitigate friction and support access for your hybrid workforce.

Mitigated risk: Gain visibility and control over user access to help mitigate the chance of breaches, insider threats, shadow IT and credential misuse.

Faster time to value: Deploy quickly and start seeing impact sooner—with prebuilt workflows and automation that accelerate results.

Compliance: Automate policy enforcement, access review certification and audit logging to help address compliance and reduce manual oversight.

Scalability and flexibility: Choose the capabilities you need now and expand as your business grows—all while integrating with your current environment.

Why Verizon

For nearly 25 years, Verizon has been helping security leaders and their teams achieve and maintain that elusive balance between tactical excellence and strategic influence. We offer a comprehensive and proven portfolio of managed and professional services that enables security teams to help improve their operations, from threat identification and detection to response and recovery. The experience of the Verizon and Accenture teams can help you reduce the need to recruit, hire, and retain the right people to build & scale critical security capabilities.

From complex multinational enterprises and small and medium businesses to local, state, and federal agencies, every organization has a different threat profile, different risk tolerances, and different strategic business objectives. So a one-size-fits-all approach to security is simply not enough. At Verizon, we meet your security program where it is, and we help you get it where you want it to be.
