

# Enhanced connectivity for state and local agencies

5G connected laptops for field, hybrid and remote workers

Today, state, county and city agencies and departments require next-level productivity from their employees serving the public. And when there's work to do, excessive connectivity issues are quite the roadblock. Imagine an agency's frustration dealing with unnecessary delays caused by workers' shaky connections to external networks on their Wi-Fi-only laptops.

Fortunately, with 5G connected laptops powered by Verizon, we can help address workers' needs for trusted access. Connected laptops provide workers with access to a secure, reliable network, helping them efficiently tackle the task at hand.

## Benefits of 5G connected laptops

### Productivity from virtually anywhere

A 5G connected laptop can help ensure that workers have access to fast, reliable connectivity, allowing them to work efficiently from different locations.

### Secure file access

The laptop's connection to Verizon's network means that workers have built-in security – so they can safeguard sensitive data even when accessing and printing files from virtually anywhere.

### Near-real-time location sharing

A stronger 5G connection lets geolocation tools track field workers' whereabouts with accuracy.

### Efficient device management

Integrated operating systems across 5G connected laptops can help IT staff manage user devices and improve cost efficiencies remotely.

## Why Verizon

We partner with leading laptop manufacturers. Additionally, our 5G connected laptops give you access to America's most reliable 5G network.<sup>1</sup> We've also been champions of state and local agencies for decades. With that, you get the support of a team of trusted experts who understand the unique challenges of your agency—a team that's with you for the long haul.
