

With SMIT, Verizon is ready to help the Navy and Marine Corps modernize communications.

See how Navy and Marine Corps bases can leap to the head of the technology curve.

Working with an aging, fragmented communications infrastructure can be frustrating, costly and time consuming. Capabilities are inconsistent across various bases and tenant commands, downtime and forced workarounds are inevitable, and cybersecurity becomes more challenging.

It's past time for your teams to have the same communication tools and capabilities that are so prevalent in civilian organizations and the business community. Leidos appreciates Verizon's vast experience and leadership in public and private sector networking, communications, and digital transformation.

That's why Leidos is partnering with Verizon to help digitally transform and modernize communications for the Navy and Marine Corps via the SMIT contract, formerly known as the Next Generation Enterprise Network for Systems Management Integration and Transport (SMIT) contract.

Designed to support modernization and digitization

SMIT is designed to provide secure end-to-end information technology (IT) services to more than 650,000 uniformed and civilian professionals who depend on the Navy Marine Corps Intranet (NMCI), the OCONUS Naval enterprise Network (ONE-Net), and the Marine Corps Enterprise Network (MCEN) for daily IT services.

Through the SMIT program, Leidos operates and maintains the NMCI network, a secure IT platform for more than 500,000 Sailors and civilians at more than 2,500 locations in the continental United States and Hawaii. Leidos provides networking, cybersecurity, service desk, field services and other end-to-end IT support.

SMIT also provides critical IT capability to roughly 150,000 Sailors, Marines and civilians who rely on the MCEN and ONE-Net networks. For the MCEN, the Marine Corps' IT network, embedded Leidos team members provide support across more than 130 labor categories, including service desk, cybersecurity and networking support for the Marines and civilians who depend on the network. In Europe and the Middle East, Leidos supports ONE-Net, the unified computing environment that provides critical connectivity to OCONUS Navy shore commands such as Naval Support Activity Bahrain, home to U.S. Naval Forces Central Command and United States Fifth Fleet. Embedded Leidos employees provide mission-critical IT support to ensure the Navy has the IT backbone required to sustain operations in the region.

Critically, Leidos brings in Verizon as a subcontractor, with its vast experience in public and private sector networking and communications, to help expand the contract into unified communications.

Through SMIT, bases can provision unified communications services—including voice over IP (VoIP), chat and video conferencing—much more quickly than with the traditional procurement and RFP process.

How Verizon can modernize your communications

As an experienced service provider to the Navy, Marine Corps and DOD—and a longtime partner of agencies at all levels of government—we can make it easy for you to modernize your technology while saving time and managing costs.

Through SMIT, Leidos and Verizon are approved to provide:

-  VoIP and Voice over Secure IP (VoSIP) services
-  Video teleconferencing equipment (VTC)
-  Wireless LAN (WLAN)
-  LAN and building area network (BAN)
-  Unified communications
-  Network transport to support all of the above

Leidos and Verizon may also be involved in providing network operations centers (NOCs), security operations centers (SOCs) and other communications solutions.

SMIT combines the support previously provided by the ONE-Net and NGEN contracts and streamlines service delivery across all three domains:

-  **ONE-Net**
 - Enterprise service desk
 - Network support
-  **NMCI**
 - Network operations and IA
 - Service desk and field services
 - Engineering
 - Project management
 - End-user hardware
-  **MCEN**
 - Service desk support
 - Cybersecurity and network support

SMIT

- Enterprise service desk
- Network and IA support
- Field services support

NMCI

- Network operations and IA
- Service desk and field services
- Engineering
- Project management

MCEN

- Service desk support

Our long history of commitment to the military

Verizon has a long history of supporting the Navy and Marine Corps, which gives us unique insight into your specific needs. And with over 10,000 veterans currently employed at Verizon and being ranked a gold status military-friendly company*, you know you're getting support not just from technology experts, but from people who understand how they can best help and support you.

Advancing your mission together

With SMIT, you can transition to a digital environment with a common set of capabilities across your organization. It's digital transformation made simple, from a partner you can trust to support your mission.
