

Illuminate the Network Edge

Moving from unmanaged complexity to simplified Monitor and Notify services.

Stay ahead of network issues before they impact your business.

The challenge of constant network

In today's digital landscape, network uptime is critical. For enterprises, any disruption can impact revenue, productivity and customer trust.

The first challenge is visibility. Many IT teams lack the resources to monitor their entire network infrastructure virtually 24/7, creating blind spots where issues can arise undetected.

The second challenge is response time. Without proactive alerts, teams often react to problems after they've already caused a service degradation or outage, leading to longer resolution times and greater business impact.

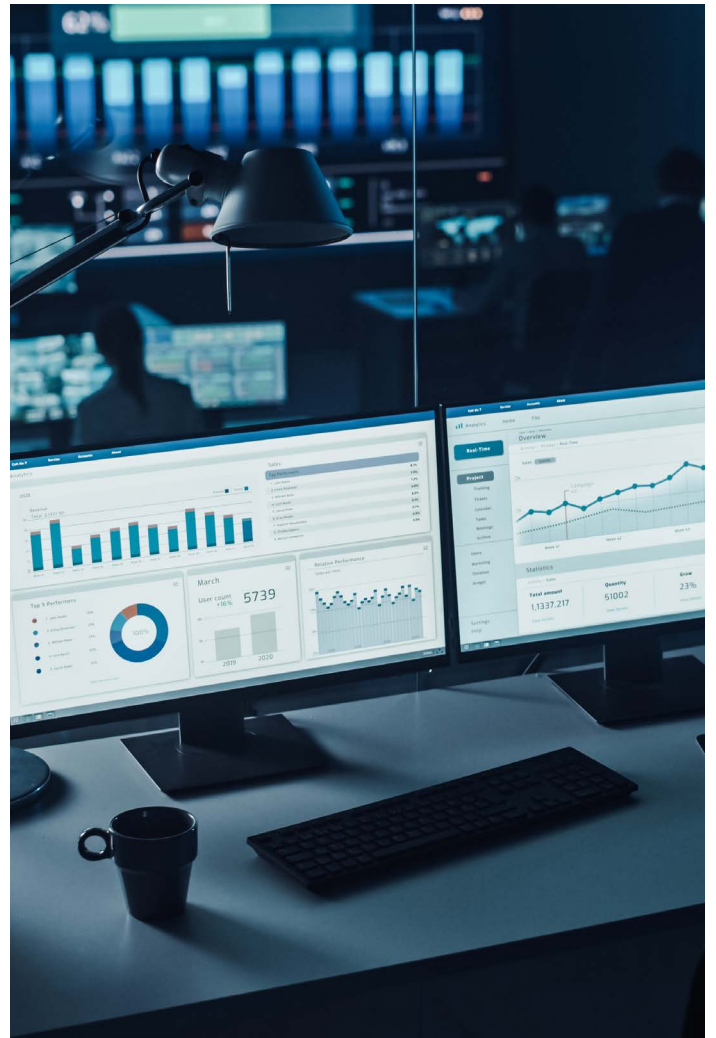

Gain visibility and control

Verizon Monitor and Notify Services provide the essential oversight you need, acting as an extension of your IT team without taking over device management.

This service is designed for organizations that want to maintain full control over their device policies and configurations for reasons of privacy or specialized requirements.

We monitor the health of your managed devices and notify you proactively when an issue arises, empowering your team to investigate and resolve it swiftly.

You get the benefit of our monitoring platform while retaining complete authority over your network security and performance configurations, ensuring operational integrity.

Key features and benefits

Virtually 24/7 health monitoring

Our platform continuously tracks key health parameters of your managed devices, including CPU, memory usage and connection counts, to detect signs of trouble.

Proactive notifications

When a predefined health threshold is breached, we generate an alert and notify your designated contacts within 15 minutes, enabling a rapid internal response.

Trend Analysis and Security Advisories

Proactive monitoring and alert to security vulnerabilities. Tap into 365 days of data for robust trend analysis with self-service Network Operations Center (NOC) reporting.

Retain full control

You maintain complete administrative access and control over your device policies and configurations. We provide the alerts; your team manages the resolution.

Expert-backed awareness

Continuous network monitoring for network health events and performance anomalies.

Why Verizon

We are dedicated to providing businesses with the tools and services they need to succeed. Verizon has a long history as a leader in networking, security and managed services, turning the latest technologies into powerful business solutions.

- Decades of experience managing complex networks
- A world-class global IP network
- Trusted by businesses worldwide

Learn more

Empower your IT team with proactive awareness to keep your network running smoothly.

To get started with Monitor and Notify Services, contact your Verizon Business representative or visit verizon.com/mns.

Services are subject to terms and conditions. Not all services are available in all areas. Please contact your Verizon representative for availability and details. Proactive outage notification SLA of 15 minutes applies as per service policies.
