

Operational visibility made easier

Verizon Sensor Insights

Intelligent monitoring without the IT complexity.

The cost of operational blind spots

Operational blind spots can create critical vulnerabilities, leading to costly disruptions, equipment failure and product spoilage. Manual processes waste valuable employee time, while traditional monitoring systems often require complex, slow-to-deploy integrations.

Intelligent monitoring, simplified

Verizon Sensor Insights is a turnkey, remote monitoring solution designed to replace these blind spots with continuous visibility. By pairing wireless, plug-and-play hardware with an intuitive portal, Sensor Insights provides real-time awareness of your connected spaces. It operates on the secure Verizon 5G/LTE network, ensuring data isolation from your corporate network. Access your dashboard from any browser and use the AI Chat Assistant to generate instant summaries, charts and recommendations.

Improve visibility

Prevent damage and failure with 24/7 monitoring from a versatile, plug-and-play sensor ecosystem for temperature, humidity, leaks and more.

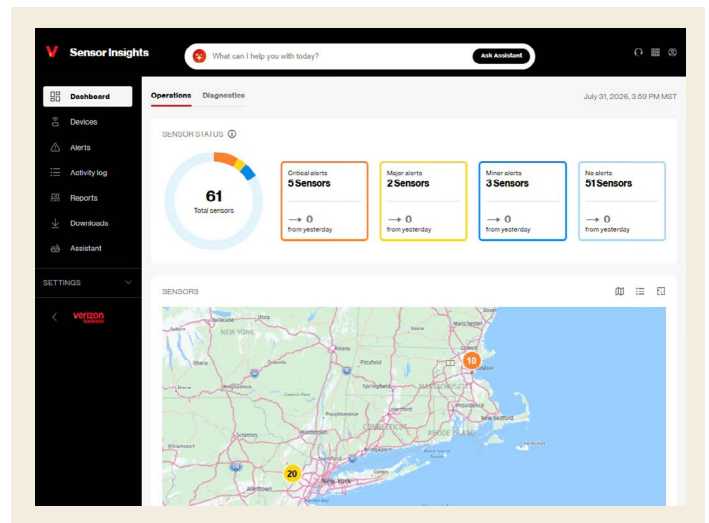

Streamline compliance

Replace tedious manual logs with automated, auditable alerts and historical reports to help meet standards like FSMA food safety regulations.

Reduce operational costs

Minimize inventory spoilage, improve energy efficiency and accurately meter facilities by feeding real-time data into your existing enterprise applications (e.g., CMMS, BAS and SCM).

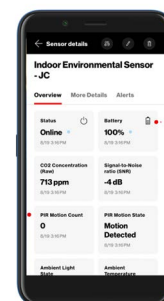

View everything in one place.

Gain instant, multi-location visibility with an operational dashboard that provides a system-wide overview of equipment and environmental conditions. Stay ahead of potential issues using 24/7 monitoring and actionable alerts, using performance trends to make informed decisions.

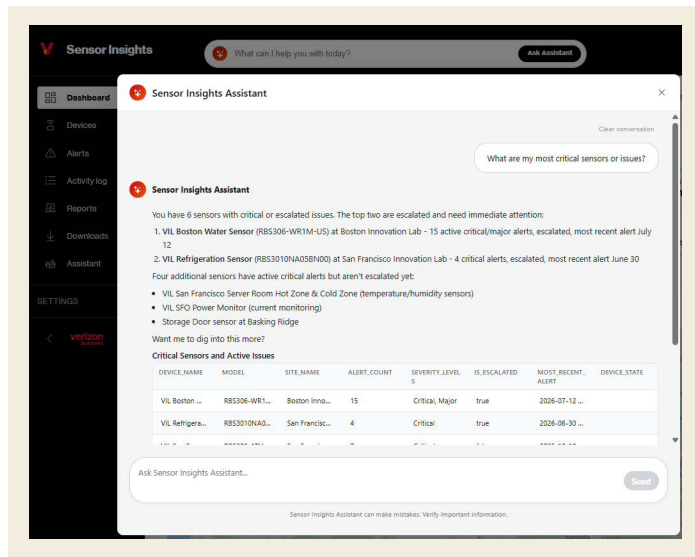

Manage from your smartphone.

Stay connected on the move with real-time tracking of conditions and sensor data from anywhere. Receive instant alerts when conditions deviate from your specified ranges. Onboard new sensors using your smartphone camera and QR codes.

verizon
business

Simplify your operations with AI and automation.

Leverage the in-dashboard AI Assistant to ask everyday questions and receive instant analysis and guidance on sensor data and products. Get data delivered in the format you need, including text summaries, paginated tables or charts with links to relevant sources. Sensor Insights also features closed-loop control for automated cold chain temperature adjustment and HVAC and energy management based on occupancy.

Why Verizon

With proven leadership in managed connectivity services and our award-winning network performance, we provide the tools and services you need to accelerate your digital transformation journey.

- Gartner® MQ™ Leader for Managed IoT¹
- Award-winning network reliability²
- A name you trust

Integrate with existing applications

Seamlessly integrate sensor data into your current enterprise software and management systems to drive smarter, more automated workflows across your operations. Connecting with platforms like CMMS, BAS, and ERP systems lets you automate critical processes and unify your data.

Deploy quickly with network isolation

Start monitoring in minutes with plug-and-play sensors that connect to the Verizon 5G/LTE network, keeping your sensor data isolated from corporate networks.

Enjoy predictable pricing

Get fixed monthly pricing for up to 100 sensors per gateway, with no hidden licenses or maintenance fees.*
