

# The simple way to secure your mobile devices

Solution brief

**Verizon Business Mobile Secure helps your workforce to stay protected and productive.**

According to the *Verizon Mobile Security Index (MSI) 2020*, almost a third (28%) of small and medium-sized businesses (SMBs) were victims of a cyberattack during 2019.<sup>1</sup>

Eighty-one percent of SMBs also stated that mobile threats posed a moderate to significant risk to their business.<sup>1</sup> To help address these challenges, we've developed a multi-layer security approach that consists of mobile device management, mobile threat defense and Wi-Fi protection, along with dedicated technical support.

Verizon Business Mobile Secure is our latest security offering for mobile devices that's built to meet the security needs of SMBs, particularly those with active mobile workforces. It provides simple, easy-to-use solutions to help keep your team productive and information protected.

---

## **Mobile device management and mobile threat defense: Securely enable mobility for your business.**

While the use of mobile devices is rapidly growing in SMBs, mobility comes with a number of risks, such as lost or stolen devices, as well as security threats. The key to managing and reducing these threats is to have strong mobile device management (MDM) and mobile threat defense capabilities in place. Business Mobile Secure includes Verizon Mobile Device Management and Lookout® for Small Business to fill this need.

Verizon Mobile Device Management gives you the ability to remotely lock or wipe stolen devices and enforce the use of lock-screen passcode requirements to help prevent unauthorized access. The solution also allows you to remotely deploy applications that help to improve employee collaboration and productivity.

Lookout for Small Business can help you quickly detect and respond to mobile threats and protect sensitive information. Whenever a threat is detected, Lookout will alert you with the details and provide instructions on how to mitigate the threat. Most issues can be resolved by the employees themselves using on-device instructions, which can reduce time spent managing security and allows you to stay focused on your business.

**Eighty percent of SMBs said that accessing business systems on mobile devices is key to their profitability and productivity.<sup>1</sup>**

---

## **Business Mobile Secure: Integrated and easy-to-set-up solutions to help protect your mobile devices from security threats**

### **Mobile device management, provided by Verizon**

Using Verizon Mobile Device Management helps you to:

- Maintain productivity by preventing and diagnosing issues before they become serious problems
- Control all your devices and access device diagnostics, 24/7, using a web portal that's linked to your Verizon My Business Account—no additional hardware or software required
- Manage device permissions and assign business policies to employees and work groups remotely—no need to collect devices
- Implement controls that include enforcing passcode requirements, wiping data and restricting access to specific apps or device functions, such as camera, screen capture and file sharing

### **Mobile threat defense and Wi-Fi protection, powered by Lookout for Small Business**

With Lookout for Small Business, you can:

- Protect mobile devices against phishing, app, network and device-based threats
- Receive notifications when a device attempts to connect to an unsecured Wi-Fi
- Get threat alerts quickly, along with simple steps for remediation
- Send a single deployment email to employees to connect them quickly without the need for an IT team to run a complex, lengthy installation process

### Dedicated technical support

- Get access to live chat with experts for tech support
- Receive security services that cover onboarding, setup and expert troubleshooting of security application issues

**Forty-three percent of SMBs that suffered a mobile security compromise said remediation was difficult or expensive.**

### Give your workforce more ways to collaborate and connect with One Talk.

For most businesses, mobile communications and collaboration are central to improving employee productivity, controlling costs and enabling remote workforces. Combined with Verizon's One Talk service, Business Mobile Secure helps you protect mobile devices, secure content, boost mobility and improve productivity—all without the added expense of dedicated IT resources.
