

Solution brief

Temporary Public Network

Short-term connectivity for a critical impact

Staying connected when it matters most

When the phones come out, device users expect reliable connectivity virtually wherever they are. For organizations supporting crucial missions and operations, the pressure to provide that connectivity only increases. So what issues stand in their way?

Lack of infrastructure

Remote areas often lack the communications infrastructure to support traditional connectivity options, leading to increased dead zones.

Excessive traffic

For operations in urban settings, major crowd spikes can overwhelm an existing public network, leading to slow data and lapses in communication for mission-critical personnel.

Operational delays

Lack of connectivity can halt communications, which can disrupt operations and even put the larger mission or operation at risk.

Meet your connectivity solution.

Verizon Temporary Public Network is a managed service that provides short-term, carrier-grade wireless connectivity for Verizon network users at the site of deployment, and it comes with plenty of benefits.

Network reliability

Equip Verizon users with the service they need to efficiently and securely use their devices in high traffic or remote areas, powered by America's best 5G network.¹

Solution flexibility

Have your temporary network solution tailored to fit the unique parameters of your mission or operation.

Security

Provide secure, high-speed bandwidth for Verizon customers, allowing them to use their devices with peace of mind.

Expert care

Lean on our expert Verizon professional services to manage the process and even troubleshoot issues on-site.

verizon

A city prepares for celebration.

A city's public safety department explored the best connectivity options for a major parade that brought thousands of guests, officials and security personnel into the streets.

Despite a major influx of traffic, the deployment of our Temporary Public Network allowed attendees to reach their destinations with minimal operational delay. Critical event staff remained synchronized, while security personnel maintained strict control over systems and surveillance feeds.

Where else can we help?

Field hospitals

Enable hospital personnel to quickly and securely access patient records and consult outside specialists as needed.

Pop-up clinics

Empower clinic staff to access important records and coordinate with additional medical personnel.

Research and testing facilities

Equip agencies with reliable connectivity to upload and share their findings at remote testing sites.

Why Verizon

Award-winning performance

Temporarily increase your capacity of America's most reliable network² for the duration of your mission or operation.

Comprehensive experience

Lean on experts that have supplied connectivity solutions across public safety and service situations for more than 25 years.

End-to-end accountability

Let us oversee the process and its many steps, from the initial sit-down to the final teardown of the equipment.
