4. CCSA SERVICE

.01 General Description

.011 CCSA Service does not involve the provision of intercity communications channels, but rather is offered as a switching service interconnecting network trunks, including circuits and services provided either by MCI or by other Participating Carriers.<sup>1/</sup> Use of MCI's common control switching machines in connection with this offering may be shared with other customers or other offerings.

[<sup>1/</sup> Customers who elect to gain access to MCI's Metered Use Service Option C (MCI WATS) in connection with CCSA Service will be billed for monthly usage on the basis of the Tier 1, Service Area 5, hourly rates specified in Section C-3.041122 for their respective originating city. However, for such CCSA-related Metered Use Service Option C usage, the average monthly minutes of use for each rate period per access line will be calculated based upon the average monthly minutes of total traffic for each rate period per CCSA Dedicated Access Arrangement. The resulting effective per minute rate will then be applied to the customer's Metered Use Service Option C Tier 1 usage. The effective per minute rate for Tier 2 usage will remain unaffected by the above.]

If the customer elects to access this service via an MCI intercity facility, or via a customer-provided facility, the basic monthly recurring charge per Dedicated Access Arrangement (input) is \$165 for Option A and \$50 for Option B.

.02112 Switch Utilization Charge: In addition to the monthly recurring Dedicated Access Arrangement Charge, a CCSA Switch Utilization Charge of \$.01 per minute will apply to all non-MCI traffic utilizing a Dedicated Access arrangement. This charge will not apply to calls which are not completed.

.0212 Options: In addition to the above mentioned features, the following options are available. The indicated monthly recurring charges for these options are additional charges per Dedicated Access Arrangement (input).

6. RATE & MILEAGE TABLES

METHOD FOR CALCULATION FOR AIRLINE MILEAGE

- .01 Method of Calculation  
 The airline mileage between two cities can be calculated using the Vertical (V) and Horizontal (H) Coordinates as obtained by reference to AT&T's Tariff F.C.C. No. 274 according to the following formula:
2. METERED USE SERVICE  
 To determine the mileage between any two cities proceed as follows:
1. Obtain the "V" and "H" coordinates for each city.
  2. Obtain the difference between the "V" coordinates of the two cities. Obtain the difference between the "H" coordinates.  
 Note: The difference is always obtained by subtracting the smaller coordinate from the larger coordinate.
  3. Divide each of the differences obtained in 2 by three, rounding each quotient to the nearer integer.

4. Square these two integers and add the two squares. If the sum of the squares is greater than 1,777, divide the integers obtained in 3 by three, and repeat step 4. Repeat this process until the sum of the squares obtained in 4 is less than 1778.
5. The number of successive divisions by three in steps 3 and 4 determines the value of "N". Multiply the final sum of the two squares obtained in step 4 by the multiplier specified in the following table for this value of "N" preceding:

<u>N</u>	<u>MULTIPLIER</u>	<u>MINIMUM RATE MILEAGE</u>
1	0.9	-
2	8.1	41
3	72.9	121
4	656.1	361
5	5,904.9	1,081
6	53,144.1	3,241

6. Obtain square root of product in 5 and with any resulting fraction, round up to next higher integer. This is the rate mileage except that when the mileage so obtained is less than the minimum rate mileage shown in 3. Preceding, the minimum rate mileage corresponding to the "N" value is applicable.

Example:

The rate mileage between Memphis and Nashville is calculated as follows:

(a)	MEMPHIS	$\frac{V}{7471}$	$\frac{H}{3125}$
	NASHVILLE	$\frac{7010}{461}$	$\frac{2710}{415}$
(b)	DIFFERENCE		

(c1) divide each difference by three and rounding to nearer integer = 154 and 138

(d1) square integer and add,  $154 \times 154 = 23716$   
 $138 \times 138 = 19044$   
 sum of squared integers 42760

sum of squared integers is greater than 1,777, so divide integers in (c1) by three and repeat (d1)

(c2) divide integers in (c1) by three and rounding = 51 AND 46

(d2) square integer and add,  $51 \times 51 = 2601$   
 $46 \times 46 = 2116$   
 sum of squared integers 4717

sum of squared integers is greater than 1,777, so divide integers in (c2) by three and repeat (d2)

(c3) divide integers in (c2) by three and rounding = 17 AND 15

(d3) square integer and add,  $17 \times 17 = 289$   
 $15 \times 15 = 225$   
 sum of squared integers 514

This sum of squared integers is less than 1778 and was obtained after four successive divisions by three, therefore, "N" = 3

EFFECTIVE: OCTOBER 1, 2017

- (e) Multiply final sum of squared integers factor 72.9 (corresponding to "N" = 3)  $514 \times 72.9 = 37470.6$
- (f) Square root of 37470.6 = 193 and a fraction, which is rounded up to 194 miles (fractional miles are considered full miles). The 194 miles is larger than the minimum of 121 miles applicable when "N" = 3 so the rate mileage is 194 miles.
