

You have a choice in your team's network.

With a dedicated core
for first responders,
you're ready.

When it comes to emergency or disaster situations, sending and receiving communications can be the difference between life and death. Which is why for years, public safety and emergency response agencies across the nation have depended on the Verizon network. Ranked #1 nationwide by RootMetrics in overall network performance (12 times in a row),¹ our network helps us make sure that the voice and data messages you need most are reliably delivered. And because we're committed to providing the best network for our public safety customers, we are continually looking for ways to improve and expand our services.

Work confidently.

The Verizon 4G LTE network is already the nation's largest and most reliable. We also offer priority access and preemption capabilities at no additional monthly cost to qualified public safety customers. These services add an extra layer of assurance that your public safety communications will continue to operate during the rare instances of increased network congestion resulting from emergencies. So whether you're dealing with a predictable workload or an unexpected emergency, you know you can rely on us to deliver a superior network experience in any situation.

What is Verizon Preemption?

Verizon leverages Preemption during peak demand and emergency situations to automatically and temporarily reallocate network resources to designated users so they can stay connected during emergencies. In those uncommon times

when the network is fully utilized, Preemption automatically activates to provide these personnel uninterrupted access to the network. It helps ensure our public safety customers can continue to communicate with each other and do their jobs, even in times of high network use.

Who is eligible for Verizon Preemption?

Your Verizon account representative will request Preemption on your behalf, after which you will need to go through a qualifying and conditioning process. Once qualified, and upon completion of an initial provisioning process, Preemption will activate as needed, giving you an additional communications safeguard.

Why Verizon

We've built a service exclusively for public safety. Because of our proven commitment to providing services at the highest standards, more first responders rely on us than any other provider. You can expect our unwavering support and services as the provider of the nation's largest and most reliable 4G LTE network.
