PAY TELEPHONE LINES

A. DESCRIPTION

1. A Pay Telephone Line (PTL) is an individual exchange dial tone line for use by pay phone service providers, location owners and interexchange carriers to connect coin, coinless or combination coin/coinless pay telephones to the Telephone Company's network.

2. There are four types of PTL's available: Station Controlled Line (SCL), Network Controlled Inmate Line (NCIL), Network Controlled Coin Line (NCCL) and Network Controlled Non-Coin Line (NCNL).

   a. Station Controlled Line (SCL)

      A SCL is an individual exchange dial tone line service designed for use with station controlled pay telephone instruments. Rates and regulations for this service are set forth in Section 18A of this tariff.

   b. Network Controlled Inmate Line (NCIL)

      A NCIL is an individual exchange dial tone line service designed for use with coinless telephone instruments provided on the premise of city, county, state and federal correctional institutions where institutionally authorized telephone programs warrant the service. Rates and regulations for this service are set forth in Section 18B of this tariff.

   c. Network Controlled Coin Line (NCCL)

      A NCCL is an individual exchange dial tone line service designed for use with coin operated, network controlled pay telephone equipment. Rates and regulations for this service are set forth in Section 18C of this tariff.

   d. Network Controlled Non-Coin Line (NCNL)

      A NCNL is an individual exchange dial tone line service designed for use with non-coin operated network controlled pay telephone equipment. Rates and regulations for this service are set forth in Section 18C of this tariff.
