PRIVATE BRANCH EXCHANGE SERVICE

III. SPECIAL CONDITIONS - Continued (T)

A. Inward Dialing Service - DID (AE - SXS 301 Type Equipment) - Continued (T)

5. Supplemental Services Arrangement (T)

Arrangement to provide full denial service will be furnished where the customer desires to deny access to toll and zone calling areas on in-service central office trunks. The charges and rates for this service are in addition to the applicable trunk service connection charge and monthly rate and contemplate station, operator, tie line or private line access to a trunk or trunk group. (T)

Metering arrangements to mechanically record each outgoing local exchange call from a station line, tie line or private line will be provided only in connection with a full line so arranged. Central office metering arrangements will be provided in accordance with the charges, rates and special conditions filed in Schedule Cal. P.U.C. No. A-15.

Full toll denial service will only be provided where the serving ("dial tone") central office and the customer are in exchanges serviced by this Utility.

On any DID system for which message waiting or metering service is provided where stations access a trunk(s) arranged for full denial service, the capability to transfer a trunk call (outgoing) to another station will not be provided.

When an attempt is being made to place a toll or zone calling call in calling areas which are denied, the call will be diverted to a recording and not to an operator of the customer or the Utility. This is the function of the toll denial trunk, not the DID system.

The arrangement will permit access only to the Traffic Service Position System (TSPS) toll operator and the arrangement that will deny access to toll and/or zone calling prefixes but will permit access to the Traffic Service Postion System (TSPS) toll operator will only be availble where the serving central office is arranged to access the traffic service position system network. (T) I (T)

A. Inward Dialing Service - DID (AE - SXS 301 Type Equipment) - Continued (T)

5. Supplemental Services Arrangement - Continued (N)

Selective access to certain customer-designated telephone, prefixes (or codes) will be provided, where compatible, in connection with local and foreign exchange trunks or private lines which terminate on the mechanical arrangements of DID systems. (T)

This arrangement will prevent access to certain telephone prefixes (or codes), while allowing calling of other telephone prefixes (or codes), at the discretion of the customer, subject to the limitations of the arrangement.

Local and foreign exchange trunks or private lines may be provided with access to different preselected dialing prefixes within the same system on different groups or stations. A separate selective arrangement is required for each group of preselected dialing prefixes.

Each station arranged for the universal nonrestriction feature may access all trunks or private line associated with the DID system irrespective of the selective arrangements applicable to each trunk or private line.

Changes in, rearrangements of, or additions to, nonrestricted prefixes caused by Utility-initiated telephone prefix (or code) changes will be made by the Utility at no charge to the customer. All other changes or rearrangements made at the customer's request will be made at the appropriate charge specified herein. (D)

1. Rotary trunk control is an arrangement whereby a customer may stop the rotary action at a predetermined trunk or line to control a selected group of trunk lines or station lines (Centrex service) by the operation of customer equipment at the customer's premises. The arrangement is permanently connected in the central office to the trunk selected to control the rotary stop function. Trunks or lines beyond the "stop" point may be utilized for night connections. Mileage charges as set forth in Private Line Schedules apply to the channel between the customer premises and the central office. (T) (L1)

2. Arrangement to provide full denial service will be furnished where the customer desires to deny access to all toll and zone calling areas on in-service central office trunks. The charges and rates for this service are in addition to the applicable trunk service connection charge and monthly rate and contemplate station, operator, tie line or private line access to a trunk or trunk group. (T)

   Metering arrangements to mechanically record each outgoing local exchange call from a station line, tie line or private line will be provided only in connection with a full denial arrangement. One meter arrangement is required for each line so arranged. Metering arrangements will be provided in accordance with the charges, rates and special conditions filed in Schedule No. A-15.

   Full toll denial service will only be provided where the serving ("dial tone") central office and the customer are in exchanges serviced by this Utility.

   On the cord type expandable dial PBX system, for which message waiting or metering service is provided where stations access a trunk(s) arranged for full denial service, the capability to transfer a trunk call (outgoing) to another station will not be provided.

   When an attempt is being made to place a toll or zone calling call in calling areas which are denied, the call will be diverted to a recording and not to an operator of the customer or the Utility. This is the function of the toll denial trunk, not the PBX. (L1) (L)

SPECIAL CONDITIONS - Continued

9. Arrangement to provide full denial service will be furnished where the customer desires to deny access to all toll and zone calling areas on in-service central office trunks. The charges and rates for the service are in addition to the applicable trunk service connection charge and monthly rate and contemplate station, operator, tie line or private line access to a trunk or trunk group. (T)

Metering arrangements to mechanically record each outgoing local exchange call from a station line, tie line or private line will be provided only in connection with a full denial arrangement. one meter arrangement is required for each line so arranged. Central office metering arrangements will be provided in accordance with the charges, rates and special conditions filed in Schedule Cal. P.U.C. No. A-15 (T)

Full toll denial service will only be provided where the serving ("dial tone") central office and the customer are in exchanges served by this Utility.

On any system for which message waiting or metering service is provided where stations access a trunk(s) (or access line to the central office) arranged for full denial service, the capability to transfer a trunk call (outgoing) to another station will not be provided.

When an attempt is being made to place a toll or zone calling call in calling areas which are denied, the call will be diverted to a recording and not to an operator of the customer or the Utility. This is a function of the toll denial trunk, not the Centrex System.

The arrangement that will permit access only to the traffic service position system toll operator and the arrangement that will deny access to toll and/or zone calling prefixes but will permit access to the traffic service position system toll operator will only be available where the serving central office is arranged to access the traffic service position system network.

SPECIAL CONDITIONS - Continued

9. - Continued

When private line services terminating on the Centrex System are arranged to provide direct dial access to the local exchange service, such service will be provided via dedicated trunks and these trunks may be equipped to deny access to toll and zone calling areas. The rate and charge for toll denial on these dedicated local trunks will be the same as for foreign exchange trunks set forth under Rates herein. Rates and charges for access arrangements, trunks, and toll denial service are applicable.

10. Selective access to certain customer-designated telephone prefixes (or codes) will be provided, where compatible, in connection with local and foreign exchange trunks or private lines which terminate on the mechanical arrangements of systems.

This arrangement will prevent access to certain telephone prefixes (or codes), while allowing calling of other telephone prefixes (or codes), at the discretion of the customer, subject to the limitations of the arrangement.

Local and foreign exchange trunks or private lines may be provided with access to different preselected dialing prefixes within the same system on different groups of stations. A separate selective arrangement is required for each group of preselected dialing prefixes.

Changes in, rearrangements of, or additions to, nonrestricted prefixes caused by utility-initiated telephone prefix (or-code) changes will be made by the Utility at no charge to the customer. All other changes or rearrangmeents made at the customer's request will be made at the appropriate change charge specified herein.

PRIVATE BRANCH EXCHANGE SERVICE

VIII. (AE-SXS 311 CTX) - Continued

SPECIAL CONDITIONS - Continued

11. Rotary out-trunk selection arrangement: Permits the customer to maintain the same outgoing call volume, and may utilize fewer trunks or circuits by providing switching equipment which will automatically search all trunks or circuits of a specific group and seize the first idle trunk or cicuit available.

    a. This service arrangement is limited to foreign exchange trunks and private line channels.

    b. All trunks or channels assigned to rotary selection arrangement must be on the same type, grade, and class of service and must have the same point-to-point terminations. Mixtures of service would defeat the purpose of this service arrangement.

    c. Private line channels with different alternate-use arrangements, or having different transmission capabilities may not be associated with the same selection arrangement.

    d. Rearrangement of trunks or channels from one selection arrangement to another, due to change in type, grade, or class of service, or points of termination, will be made at the nonrecurring charge for installation of a new trunk or channel.

12. When a central office that furnished Centrex Service is converted to common control switching equipment, existing Centrex Service customers will be notified of the planned conversion a minimum of one year in advance and will be required to terminate the Centrex Service within two years after the central Office is converted. Centrex service furnished during the two year service limitation period will continue to be offered under RATES above.

4. Rotary trunk control is an arrangement whereby a customer may stop the rotary action at a predetermined trunk or line to control a selected group of trunk lines or station lines (Centrex service) by the operation of customer equipment at the customer's premises. The arrangement is permanently connected in the central office to the trunk selected to control the rotary stop function. Trunks or lines beyond the "stop" point may be utilized for night connections. Mileage charges as set forth in Private Line Schedules apply to the channel between the customer premises and the central office. (T) x (T) (T) x

5. Arrangement to provide full denial service will be furnished where the customer desires to deny access to all toll and zone calling areas on in-service central office trunks. The charges and rates for this service are in addition to the applicable trunk service connection charge and monthly rate and contemplate station, operator, tie line or private line access to a trunk or trunk group.

   Metering arrangements to mechanically record each outgoing local exchange call from a station line, tie line or private line will be provided only in connection with a full denial arrangement. One meter arrangement is required for each line so arranged. Metering arrangements will be provided in accordance with the charges, rates and special conditions filed in Schedule No. A-15.

   Full toll denial service will only be provided where the serving ("dial tone") central office and the customer are in exchanges serviced by this Utility.

   On the cord type expandable dial PBX system, for which message waiting or metering service is provided where stations access a trunk(s) arranged for full denial service, the capability to transfer a trunk call (outgoing) to another station will not be provided.

   When an attempt is being made to place a toll or zone calling call in calling areas which are denied, the call will be diverted to a recording and not to an operator of the customer or the Utility. This is the function of the toll denial trunk, not the PBX.

SPECIAL CONDITIONS - Continued

5. - Continued

The arrangement that will permit access only to the traffic service position system toll operator and the arrangement that will deny access to toll and/or zone calling prefixes, but will permit access to the traffic service position system toll operator, will only be available where the serving central office is arranged to access the traffic service position system network.

6. Selective access to certain customer-designated telephone prefixes (or codes) will be provided, where compatible, in connection with local and foreign exchange trunks or private lines which terminate on the mechanical arrangements of PBX systems.

This arrangement will prevent access to certain telephone prefixes (or codes) while allowing talking of other telephone prefixes (or codes), at the discretion of the customer, subject to the limitations of the arrangement.

Local and foreign exchange trunks or private lines may be provided with access to different preselected dialing prefixes within the same system on different groups of stations. A separate selective arrangement is required for each group of preselected dialing prefixes.

Each station arranged for the universal nonrestriction feature may access all trunks or private lines associated with the PBX system irrespective of the selective arrangements applicable to each trunk or private line.

Changes in, rearrangements of, or additions to, nonrestricted prefixes caused by Utility-initiated telephone prefix (or code) changes will be made by the Utility at no charge to the customer. All other changes or rearrangements made at the customer's request will be made at the appropriate charge specified in Schedule Cal. P.U.C. No. A-41.
