5. Supplemental Services Arrangement

(T)

Arrangement to provide full denial service will be furnished where the customer desires to deny access to toll and zone calling areas on in-service central office trunks. The charges and rates for this service are in addition to the applicable trunk service connection charge and monthly rate and contemplate station, operator, tie line or private line access to a trunk or trunk group.

(T)

Metering arrangements to mechanically record each outgoing local exchange call from a station line, tie line or private line will be provided only in connection with a full line so arranged. Central office metering arrangements will be provided in accordance with the charges, rates and special conditions filed in Schedule Cal. P.U.C. No. A-15.

Full toll denial service will only be provided where the serving ("dial tone") central office and the customer are in exchanges serviced by this Utility.

On any DID system for which message waiting or metering service is provided where stations access a trunk(s) arranged for full denial service, the capability to transfer a trunk call (outgoing) to another station will not be provided.

When an attempt is being made to place a toll or zone calling call in calling areas which are denied, the call will be diverted to a recording and not to an operator of the customer or the Utility. This is the function of the toll denial trunk, not the DID system.

The arrangement will permit access only to the Traffic Service Position System (TSPS) toll operator and the arrangement that will deny access to toll and/or zone calling prefixes but will permit access to the Traffic Service Position System (TSPS) toll operator will only be available where the serving central office is arranged to access the traffic service position system network.

(N)

Selective access to certain customer-designated telephone, prefixes (or codes) will be provided, where compatible, in connection with local and foreign exchange trunks or private lines which terminate on the mechanical arrangements of DID systems.

(T)

This arrangement will prevent access to certain telephone prefixes (or codes), while allowing calling of other telephone prefixes (or codes), at the discretion of the customer, subject to the limitations of the arrangement.

Local and foreign exchange trunks or private lines may be provided with access to different preselected dialing prefixes within the same system on different groups or stations. A separate selective arrangement is required for each group of preselected dialing prefixes.

Each station arranged for the universal nonrestriction feature may access all trunks or private line associated with the DID system irrespective of the selective arrangements applicable to each trunk or private line.

Changes in, rearrangements of, or additions to, nonrestricted prefixes caused by Utility-initiated telephone prefix (or code) changes will be made by the Utility at no charge to the customer. All other changes or rearrangements made at the customer's request will be made at the appropriate charge specified herein.

(T)

3. Capacity and Limitations - Continued

(N)

- d. Arrangement to provide full denial service will be furnished where the customer desires to deny access to all toll and zone calling areas on in-service central office trunks. The charges and rates for the service are in addition to the applicable trunk service connection charge and monthly rate and contemplate station, operator, tie line or private line access to a trunk or trunk group.

(T) (L)

Metering arrangements to mechanically record each outgoing local exchange call from a station line, tie line or private line will be provided only in connection with a full denial arrangement. one meter arrangement is required for each line so arranged. Central office metering arrangements will be provided in accordance with the charges, rates and special conditions filed in Schedule Cal. P.U.C. No. A-15

Full toll denial service will only be provided where the serving ("dial tone") central office and the customer are in exchanges served by this Utility.

On any system for which message waiting or metering service is provided where stations access a trunk(s) (or access line to the central office) arranged for full denial service, the capability to transfer a trunk call (outgoing) to another station will not be provided.

When an attempt is being made to place a toll or zone calling call in calling areas which are denied, the call will be diverted to a recording and not to an operator of the customer or the Utility. This is a function of the toll denial trunk, not the Centrex System.

The arrangement that will permit access only to the traffic service position system toll operator and the arrangement that will deny access to toll and/or zone calling prefixes but will permit access to the traffic service position system toll operator will only be available where the serving central office is arranged to access the traffic service position system network.

When private line services terminating on the Centrex System are arranged to provide direct dial access to the local exchange service, such service will be provided via dedicated trunks and these trunks may be equipped to deny access to toll and zone calling areas. The rate and charge for toll denial on these dedicated local trunks will be the same as for foreign exchange trunks set forth under Rates herein. Rates and charges for access arrangements, trunks, and toll denial service are applicable.

- e. Selective access to certain customer-designated telephone prefixes (or codes) will be provided, where compatible, in connection with local and foreign exchange trunks or private lines which terminate on the mechanical arrangements of systems.

(T)

This arrangement will prevent access to certain telephone prefixes (or codes), while allowing calling of other telephone prefixes (or codes), at the discretion of the customer, subject to the limitations of the arrangement.

Local and foreign exchange trunks or private lines may be provided with access to different preselected dialing prefixes within the same system on different groups of stations. A separate selective arrangement is required for each group of preselected dialing prefixes.

Changes in, rearrangements of, or additions to, nonrestricted prefixes caused by utility-initiated telephone prefix (or-code) changes will be made by the Utility at no charge to the customer. All other changes or rearrangements made at the customer's request will be made at the appropriate change charge specified herein.

PRIVATE BRANCH EXCHANGE SERVICE

III. SPECIAL CONDITIONS - Continued

(T) (L1) (L)

C. Supplemental Services Arrangement - Applicable to More Than One Type PBX

(N)

1. Rotary trunk control is an arrangement whereby a customer may stop the rotary action at a predetermined trunk or line to control a selected group of trunk lines or station lines (Centrex service) by the operation of customer equipment at the customer's premises. The arrangement is permanently connected in the central office to the trunk selected to control the rotary stop function. Trunks or lines beyond the "stop" point may be utilized for night connections. Mileage charges as set forth in Private Line Schedules apply to the channel between the customer premises and the central office.

(T) (L1)

2. Arrangement to provide full denial service will be furnished where the customer desires to deny access to all toll and zone calling areas on in-service central office trunks. The charges and rates for this service are in addition to the applicable trunk service connection charge and monthly rate and contemplate station, operator, tie line or private line access to a trunk or trunk group.

(T)

Metering arrangements to mechanically record each outgoing local exchange call from a station line, tie line or private line will be provided only in connection with a full denial arrangement. One meter arrangement is required for each line so arranged. Metering arrangements will be provided in accordance with the charges, rates and special conditions filed in Schedule No. A-15.

Full toll denial service will only be provided where the serving ("dial tone") central office and the customer are in exchanges serviced by this Utility.

On the cord type expandable dial PBX system, for which message waiting or metering service is provided where stations access a trunk(s) arranged for full denial service, the capability to transfer a trunk call (outgoing) to another station will not be provided.

When an attempt is being made to place a toll or zone calling call in calling areas which are denied, the call will be diverted to a recording and not to an operator of the customer or the Utility. This is the function of the toll denial trunk, not the PBX.

2. Capacity and limitations

a. Common Equipment

- (1) This is a step-by-step (SXS) rack mounted system, with unlimited capacities for station lines, trunks and intercommunicating paths with trunk groups limited only by selector access availability.
- (2) The rates and charges set forth in this schedule contemplate the provision of service under average installation conditions, in keeping with established standards of the Utility and the availability of appropriate facilities. If unusual installation costs are involved, the Utility may decline the provision of service or require the customer to pay all or a portion of such costs, the amount depending on whether the revenue to be derived from the service is sufficient to warrant the Utility assuming such costs. The amount of such additional installation costs will depend on the circumstances in each case and charges to the customer are subject to prior authorization by the Public Utilities Commission.
- (3) In addition to the basic service features, Centrex Service includes detail billing of toll traffic, and optional bulk or detail billing of zone calling traffic or local calls in a measured rate area (central office located centrex only) by station line number.

PRIVATE BRANCH EXCHANGE SERVICE

XIV. - Continued

SPECIAL CONDITIONS - Continued

4. Rotary trunk control is an arrangement whereby a customer may stop the rotary action at a predetermined trunk or line to control a selected group of trunk lines or station lines (Centrex service) by the operation of customer equipment at the customer's premises. The arrangement is permanently connected in the central office to the trunk selected to control the rotary stop function. Trunks or lines beyond the "stop" point may be utilized for night connections. Mileage charges as set forth in Private Line Schedules apply to the channel between the customer premises and the central office.

(T) x

(T)

(T)

x

5. Arrangement to provide full denial service will be furnished where the customer desires to deny access to all toll and zone calling areas on in-service central office trunks. The charges and rates for this service are in addition to the applicable trunk service connection charge and monthly rate and contemplate station, operator, tie line or private line access to a trunk or trunk group.

Metering arrangements to mechanically record each outgoing local exchange call from a station line, tie line or private line will be provided only in connection with a full denial arrangement. One meter arrangement is required for each line so arranged. Metering arrangements will be provided in accordance with the charges, rates and special conditions filed in Schedule No. A-15.

Full toll denial service will only be provided where the serving ("dial tone") central office and the customer are in exchanges serviced by this Utility.

On the cord type expandable dial PBX system, for which message waiting or metering service is provided where stations access a trunk(s) arranged for full denial service, the capability to transfer a trunk call (outgoing) to another station will not be provided.

When an attempt is being made to place a toll or zone calling call in calling areas which are denied, the call will be diverted to a recording and not to an operator of the customer or the Utility. This is the function of the toll denial trunk, not the PBX.

Resolution No.

PRIVATE BRANCH EXCHANGE SERVICE

XIV. - Continued

SPECIAL CONDITIONS - Continued

5. - Continued

The arrangement that will permit access only to the traffic service position system toll operator and the arrangement that will deny access to toll and/or zone calling prefixes, but will permit access to the traffic service position system toll operator, will only be available where the serving central office is arranged to access the traffic service position system network.

6. Selective access to certain customer-designated telephone prefixes (or codes) will be provided, where compatible, in connection with local and foreign exchange trunks or private lines which terminate on the mechanical arrangements of PBX systems.

This arrangement will prevent access to certain telephone prefixes (or codes) while allowing talking of other telephone prefixes (or codes), at the discretion of the customer, subject to the limitations of the arrangement.

Local and foreign exchange trunks or private lines may be provided with access to different preselected dialing prefixes within the same system on different groups of stations. A separate selective arrangement is required for each group of preselected dialing prefixes.

Each station arranged for the universal nonrestriction feature may access all trunks or private lines associated with the PBX system irrespective of the selective arrangements applicable to each trunk or private line.

Changes in, rearrangements of, or additions to, nonrestricted prefixes caused by Utility-initiated telephone prefix (or code) changes will be made by the Utility at no charge to the customer. All other changes or rearrangements made at the customer's request will be made at the appropriate charge specified in Schedule Cal. P.U.C. No. A-41.
