INTEGRATED SERVICES DIGITAL NETWORK SERVICES

I. GENERAL

APPLICABILITY

Applicable to network services provided in accordance with Integrated Services Digital Network (ISDN) standards.

TERRITORY

Within all exchange areas as those areas are defined by maps filed as part of the tariff schedules.

INSTALLATION AND SUBSEQUENT CHANGES

Applicable charges as set forth under Nonrecurring Charges of this tariff (Schedule Cal. P.U.C. No. A-41) will apply for the ordering and processing of a customer's request for initial service and subsequent changes. Appropriate charges will apply for each "B" Channel configuration type (regardless of quantity per service order) on a per ISDN-PRI Service basis.

ADDITIONAL RATES AND CHARGES

The following rates and charges are in addition to other rates and charges that may be applicable for accessible services which operate in conjunction with ISDN-PRI Service (e.g., OutWATS, 800 Service, etc.). Regulations that apply on a per line basis from other sections in this tariff apply to ISDN-PRI on per channel basis.

GTE CALIFORNIA EDUCATION INITIATIVE

New services provided in this schedule are subject to the GTEC Education Initiative Waiver. A credit of up to $2,000.00 may be used within 24 months after applying to the program. This program is available to Public Schools (K-12), Public Libraries, Community Colleges and/or Private Schools (K-12) that have more than 100 students, are registered with the Department of Education and are within GTEC serving area for the installation and/or monthly rate for the new services. The waiver period will be for a 36 month period beginning November 9, 1994 and ending November 9, 1997.

	Nonrecurring Charge	Monthly Rates	IOSC	
10. Automatic Call Distribution / Management Information System (ACD/MIS)				
a. Basic ACD Feature Package				
per ACD Group	55.00		(50800)	
per ACD Line[1]		28.40	(50801)	
Multipoint ACD Line		42.60	(50813)	
b. Advanced ACD/MIS Optional Features				
Additional Queue Slots				
per System	25.00		(50809)	
per Slot		2.65	(50810)	(I)
Call Prompts,[2]				
per step[3]	100.00		(50802)	
per step[3]		150.00	(50803)	
Call Vectoring				
per ACD Group	40.00		(50804)	
per ACD Line		4.00	(50805)	
Direct Agent Access				
per Access Number	N/A	2.00(R)	(50806)	
MIS Data Link				
per link[4]	25.00		(50807)	
per link[4]		80.00	(50808)	

NOTE 1: See Schedule Cal. P.U.C. No. A-1 for applicable Local Calling Usage Rates.
NOTE 2: Customer must subscribe to Call Vectoring to have Call Prompts.
NOTE 3: The Nonrecurring charges for Call Prompts apply per step. Each arrangement level is a "step", for example: the first step would ask the customer to press "1" for the Accounting Department or press "2" for Engineering. Once the customer responded to the first prompt, the second step would then ask the customer to press "1" for Cost Accounting, "2" for Disbursement Accounting, and so on.
NOTE 4: One MIS Data Link is required for each supervisor's workstation.

3. MONTHLY RATES - Continued

	Monthly Rates	
c. Channel Configurations		(C)
(1) Dedicated Trunks (Per Channel)		
Circuit Switched Data[1]	**	(T)
DID/DOD Service First telephone number for each channel activated[1]	$ 4.00	(T)
Additional Telephone Numbers	0.40	
Intermediary Customer Services#[1]	30.00	(T)

ISDN Intermediary Customer Services channel configuration rates and charges apply only to ISDN-PRI facilities which extend from the C.O. to the Intermediary Customer. In order to send calls to ISDN Intermediary Customer Services, some form of local loop access from the customer's premises to the customer's ISDN serving central office is also needed (e.g., CentraNet®, DID trunk, DOD trunk, or Call-by-Call). The Intermediary Customer Service channel configuration monthly rate is applicable when such channels are activated on a contract term PRI Access Switched Facility System. (N)

1 Circuit Switched Data, DID/DOD Service, Intermediary Customer Services rates apply in addition to PRI Access Service rates for customers who select the month-to-month service rates. (N)

** See applicable rate under "Switched Data Service," Schedule Cal. P.U.C. No. A-23.

Material omitted now shown on 2nd Revised Sheet 6.

4. NONRECURRING CHARGES

a. Database Configuration

Nonrecurring charges for database work are applicable to Month-to-Month PRI Services only. The nonrecurring charges for database work will apply on a per service order basis regardless if the order is an initial or subsequent order. These charges are in addition to other nonrecurring charges specified in this or other appropriate tariffs. (C) (C)

(1) PRI Access Database Configuration Charge: The PRI Access Database Charge applies to the PRI Access when adding, changing, and/or deleting channels on a per ISDN-PRI Service basis. (C)

(2) Channel Database Configuration Charge: The Channel Database Charge applies for additions, deletions, or modifications of each Channel type (regardless of quantity per service order) within each dedicated and/or call-by-call access arrangement. These charges apply only to the customers who select month-to-month rates. (C) (C) (C) (C)

(3) Month-to-Month PRI Access Rates: (C)

	Nonrecurring Charges	
		(D)
Initial Database Configuration[1]	$200.00	(C)

b. PRI Access Switched Facility System (N)

The PRI Access Switched Facility System configurations are offered on a contract term basis only. The nonrecurring charges applicable to the PRI Access Switched Facility Systems are the Initial Configuration Nonrecurring Charge and the Subsequent Activity Nonrecurring Charge.

(1) Initial Configuration Nonrecurring Charge: The Initial Configuration Nonrecurring Charge applies when a contract term PRI Access Switched Facility System is placed into service. One such nonrecurring charge is applicable for each PRI Access Switched Facility System.

(2) Subsequent Activity Nonrecurring Charge: The Subsequent Activity Charge applies when a change is made to the customer's contract term PRI Access Switched Facility System Service at the customer's request. This charge applies per customer location/serving central office basis to all changes in the configuration of the service other than an order of additional PRI Access Switched Facility Systems, in which case the Initial Configuration Nonrecurring Charge(s) applies.

(3) Charges:

	Nonrecurring Charges
Initial Database Configuration[1]	$500.00
Subsequent Activity[1]	200.00

[1] The Initial Configuration and Subsequent Activity Nonrecurring Charges apply to customers who select the contract term offerings of Local or Out of Calling Scope PRI Access Switched Facility System Service.

3 Year Contract	480.00	
5 Year Contract	452.00	
(b) Out of Calling Scope PRI Access Switched Facility System*[1]		
1 Year Contract	680.00	(R)
3 Year Contract	640.00	|
5 Year Contract	612.00	(R)
(c) Out of Calling Scope Special Transport		
OOCS Transport Rate (per airline mile)	#	

* Both the Local and Out of Calling Scope PRI Access Switched Facility System types include the local access facility, PRI Access interface and all channels activated with the customer's choice of channel types with the exception of the Intermediary Customer Services Channel Configuration. The Intermediary Customer Services Channel is only available with the additional application of the per channel Monthly Rate for Intermediary Customer Services.

[1] Out of Calling Scope PRI Access Switched Facility System Service incurs the additional rates associated with the necessary Out of Calling Scope (OOCS) Special Transport. The OOCS Special Transport is applicable on a per airline mile basis for the required High Capacity DS1 Special Transport facilities between the serving central office (C.O.) and the customer's normal C.O. Refer to Special Access, High Capacity DS1 Facilities, Schedule Cal. P.U.C. No. C-1.

\# Refer to Special Access, High Capacity Digital DS1 Facilities, Schedule Cal. P.U.C. No. C-1.

For Qualifications see Special Condition III.C.11.

NONRECURRING CHARGES

(1) Database Configuration

Nonrecurring charges for database work are applicable to Month-to-Month PRI Services only. (C)
The nonrecurring charges for database work will apply on a per service order basis (C)
regardless if the order is an initial or subsequent order. These charges are in addition to other nonrecurring charges specified in this or other appropriate tariffs.

(a) PRI Access Database Configuration Charge: The PRI Access Database Charge applies to the PRI Access when adding, changing, and/or deleting channels on a per ISDN-PRI Service basis. (C)

(b) Channel Database Configuration Charge: The Channel Database Charge applies for (C)
additions, deletions, or modifications of each Channel type (regardless of quantity per (C)
service order) within each dedicated and/or call-by-call access arrangement. These
charges apply only to the customers who select month-to-month rates. (C)

(c) Month-to-Month PRI Access Rates: (C)

	Nonrecurring Charges	
		(D)
Initial Database Configuration[1]	$200.00	(C)
		(D)
PRI Facility[1]	#	(T)

Refer to Special Access, High Capacity Digital DS1 Facilities, Schedule Cal. P.U.C. No. C-1. (C)

[1] Initial Database Configuration and PRI Facility charges apply to customers who select month-to-month service rates. (N)
(N)

2. PRI Access Switched Facility System (N)

The PRI Access Switched Facility System configurations are offered on a contract term basis only. The nonrecurring charges applicable to the PRI Access Switched Facility Systems are the Initial Configuration Nonrecurring Charge and the Subsequent Activity Nonrecurring Charge.

(a) Initial Configuration Nonrecurring Charge: The Initial Configuration Nonrecurring Charge applies when a contract term PRI Access Switched Facility System is placed into service. One such nonrecurring charge is applicable for each PRI Access Switched Facility System.

(b) Subsequent Activity Nonrecurring Charge: The Subsequent Activity Charge applies when a change is made to the customer's contract term PRI Access Switched Facility System Service at the customer's request. This charge applies per customer location/serving central office basis to all changes in the configuration of the service other than an order of additional PRI Access Switched Facility Systems, in which case the Initial Configuration Nonrecurring Charge(s) applies.

(c) Charges:

	Nonrecurring Charges
Initial Database Configuration[1]	$500.00
Subsequent Activity[1]	200.00

[1] The Initial Configuration and Subsequent Activity Nonrecurring Charges apply to customers who select the contract term offerings of Local or Out of Calling Scope PRI Access Switched Facility System Service.

NONRECURRING CHARGES

(1) Database Configuration

Nonrecurring charges for database work are applicable to Month-to-Month PRI Services only. (C)
The nonrecurring charges for database work will apply on a per service order basis (C)
regardless if the order is an initial or subsequent order. These charges are in addition to other nonrecurring charges specified in this or other appropriate tariffs.

(a) PRI Access Database Configuration Charge: The PRI Access Database Charge (C)
applies to the PRI Access when adding, changing, and/or deleting channels on a per ISDN-PRI Service basis.

(b) Channel Database Configuration Charge: The Channel Database Charge applies for (C)
additions, deletions, or modifications of each Channel type (regardless of quantity per (C)
service order) within each dedicated and/or call-by-call access arrangement. These
charges apply only to the customers who select month-to-month rates. (C)

(c) Month-to-Month PRI Access Rates: (C)

	Nonrecurring Charges	
		(D)
Initial Database Configuration[1]	$200.00	(C)

2. PRI Access Switched Facility System (N)

The PRI Access Switched Facility System configurations are offered on a contract term basis only. The nonrecurring charges applicable to the PRI Access Switched Facility Systems are the Initial Configuration Nonrecurring Charge and the Subsequent Activity Nonrecurring Charge.

(a) Initial Configuration Nonrecurring Charge: The Initial Configuration Nonrecurring Charge applies when a contract term PRI Access Switched Facility System is placed into service. One such nonrecurring charge is applicable for each PRI Access Switched Facility System.

(b) Subsequent Activity Nonrecurring Charge: The Subsequent Activity Charge applies when a change is made to the customer's contract term PRI Access Switched Facility System Service at the customer's request. This charge applies per customer location/serving central office basis to all changes in the configuration of the service other than an order of additional PRI Access Switched Facility Systems, in which case the Initial Configuration Nonrecurring Charge(s) applies.

(c) Charges:

	Nonrecurring Charges
Initial Database Configuration[1]	$500.00
Subsequent Activity[1]	200.00

[1] The Initial Configuration and Subsequent Activity Nonrecurring Charges apply to customers who select the contract term offerings of Local or Out of Calling Scope PRI Access Switched Facility System Service.

A. DEFINITIONS

Automatic Call Distribution-Management Information System (ACD/MIS). A central office based service which allows customers' incoming calls to be equally distributed to their available agents. Distribution of calls is determined by call parameters defined by the customer. The MIS data link passes call event information to the MIS located in the central office. Features are described in III.B.

Basic Rate Interface (BRI) Line. A two-wire facility which extends from a central office to a point of demarcation at a customer location. A BRI Line supports two 64 kilobytes per second (Kbps) B Channels and one 16 Kbps D Channel (2B+D). (T)

B Channel (Bearer Channel). A PRI channel used to carry digitized voice and data information at a speed of 64 Kbps. (T)

Call-by-Call Access. Network capability whereby one individual B Channel can be used for any of the services the customer desires. The individual B Channel, when programmed for Call-by-Call Access, can be used, at any one time, for DID, DOD, WATS, or CSD. The channel is not dedicated to a specific service. (T)

Channel. The electrical path provided by the Utility between two or more terminating points for the transmission of information or intelligence.

Clear Channel Capacity. The capability to transport 64 Kbps over a channel with no constraint on the quantity or on the sequence of bits.

D Channel (Delta Channel). A 64 Kbps PRI channel which carries information used to control PRI Line channels. A 16 Kbps BRI channel primarily used for signaling messages. The bit rate is fixed as a function of the interface used. (T) (T)

D Packet.[1] A service which permits a customer to use a D Channel for packet switched data and utilizes 9.6 of the 16 Kbps on BRI and Single Line ISDN D Channel and allows for more than one data service. (T) (T)

Digital (ISDN) Single Line. A Basic Rate Interface (BRI) Line for residence and business customers who require single line service. See definition for Basic Rate Interface.

[1] Service is grandfathered and limited to existing customers as of February 13, 2004. (N)

INTEGRATED SERVICES DIGITAL NETWORK SERVICES

III. SPECIAL CONDITIONS

A. DEFINITIONS - Continued

Integrated Services Digital Network (ISDN). A set of standards which enable end-to-end digital transmission, access integration, and established standardization of points of interconnection over a single access line. End-to-end digital transmission eliminates the necessity for voice-band modems that use analog processing techniques. Access integration refers to utilizing a single ISDN line, whereby an end user over one line can access a wide variety of user information services such as voice, circuit switched data, and packet-switched data.

Caller ID. Provides for the display of the incoming call station number. (T)

ISDN Access. The central office termination of a BRI line arranged for an individual user for access to the public switched network with one B-Voice Channel, one B-CSD or B-Packet Channel, and with one D Channel. Both B Channels do not need to be activated.

ISDN Multipoint Access. The central office termination of a BRI Line arranged for access to the public switched network with any one type of central office service such as B-Voice, B-CSD, or B-Packet, assigned to both B Channels and with one D Channel.

ISDN Station Service. A Basic or Deluxe package of central office functions operated or activated by customer premises equipment.

ISDN-PRI Service Arrangement. An ISDN-PRI Service Arrangement denotes one or more PRI Facilities plus PRI Access arranged together in the same or different central offices to provide one single service for the same customer.

Kbps. Kilobits per Second.

Mbps. Megabits per Second.

Network Ring Again. A service which notifies a caller when a station within a system becomes idles and completes a call to that station if activated.

Primary Rate Interface (PRI). The term "Primary Rate Interface" denotes the connection of a 1.544 Kbps digital facility to the ISDN-PRI capable Central Office switch. The twenty-four channels are typically divided into twenty-three B-Channels plus one D-Channel. Software in the ISDN-PRI equipped Central Office switch defines the type of access services that will be carried (e.g., DID- DOD, OutWATS, and 800 Service) within the 1.544 Mbps digital facility.

INTEGRATED SERVICES DIGITAL NETWORK SERVICES

III. SPECIAL CONDITIONS

A. DEFINITIONS - Continued

Primary Rate Interface (PRI) Access. The central office facility for terminating and channelizing a Primary Rate Interface.

Primary Rate Interface (PRI) Line. A four-wire facility which extends from a central office to a point of demarcation at a customer location. The PRI is a 1.544 Mbps carrier facility which is used to connect digital private branch exchanges or other channel controlling devices to the switched and private line networks. A PRI Line supports twenty-three 64 Kbps B-channels and one 64 Kbps D-channel.

Remote Switching Cluster - A Remote Switching Cluster exists when the remote switch is dependent on the host switch for its software processing. A remote switch can process intra-office calls without the host switch.

System. An interconnected arrangement of exchange and private-line services provided from one Central Office for use at one premises. The combination of Basic Rate Interface Lines plus ISDN Access and ISDN Multiline Access forming a complete communications system for a single customer of record. The intercom function is permitted only among stations within a system.

Tie Channel Service. Tie Channel Service provides intercom capability on B Channels of ISDN-PRI arrangements and other digital CentraNet® systems within the same subscriber network (central office-to-central office). This feature provides the capability to communicate on a private facility basis, as a tie line between CentraNet® systems served from different central offices. Tie channels on a single ISDN-PRI arrangement can be configured for intercom calling to a CentraNet® system and local exchange access for the Customer Premises Equipment (CPE). Intercom calls between an ISDN-PRI arrangement and a CentraNet® system do not incur usage charges. Calls to telephone numbers outside of a CentraNet® system without intercom capability may incur usage charges.

Tie Channel Service may terminate on CPE at the customer location or at an Intermediary Customer (IC) location. Rates for the Tie Channel Service to customer premises or central office-to-central office are available on a per B Channel basis, or on a per PRI basis when 11 or more B Channels are activated. Rates for Tie Channel Service to an IC are available on a per B Channel basis, or on a per PRI basis when 11 or more B Channels are activated. Tie Channel Service is available on a Month-to-Month basis or on a 1, 2, 3, or 5 Year Term. ISDN-PRI CentraNet® Access or ISDN-PRI VOIP CentraNet® Access nonrecurring charges as set forth in Schedule Cal. P.U.C. No. A-2, B.7 or B.8 always apply. Tie Channels are in addition to the normal channel charges. (N) | (N)

Tie Channel Service is available where facilities and conditions permit. Tie Channel Service will not be provided on a Call-by-Call basis.

Tie Channel Service to Intermediary Customers. B Channels may be dedicated or allowed to interconnect with various services provided by other service providers, such as Interexchange Carriers or competitive access providers. The customer shall be responsible for the ordering of these services.

User. A member of a business system.

Basic Service Functions Direct Inward Dialing (DID), Direct Outward Dialing (DOD), Distinctive Ringing, Station-to-Station Calling (Intercom), Touch Call, and Incoming Calling Number Identification (Station-to-Station).

CentraNet Feature Packages (C) (D)

The following features are available in Feature Packages 1000, 2000, and 3000. Features may not be substituted to, deleted from, or transferred between packages. Feature definitions: (N)

Call Forward - allows incoming calls to a CentraNet® station to be automatically forwarded to another telephone number. There are three variations of Call Forward: (1) forward all calls, (2) forward when busy, or (3) forward when no answer. Forwarding for hunt groups is available for the above three options.

Call Hold - enables a station, engaged in a call, to set the call into a holding condition completely freeing the station to place a call, receive a call, and or use other CentraNet® services. One call per station line can be held at a time.

Call Pickup - allows one party to dial a code and pickup another party's ringing telephone thus connecting the calling party with the party that dialed the code. The pickup can be directed to any person within a call pickup group or to a specific station number.

Call Transfer - allows a station to hold and transfer calls. During the transfer the transferring and receiving stations talk privately. Call Transfer allows station users to transfer a direct inward call to a telephone number inside or outside the customer group. The station user who hangs up may then originate and receive calls. This feature may be selectively denied from certain stations. (N)

Charges between the originating location and the DID-DOD transfer equipped station will be billed to the originating caller. The transferring CentraNet® station will be responsible for applicable charges from the CentraNet® station to the telephone number that answers the transferred call. All local, measured unit, zone units, and toll charges are applicable in accordance with regularly filed tariff schedules.

Call Waiting - an incoming call encountering a busy station receives audible ringing. The called busy station receives a call waiting tone and may then acknowledge the incoming caller, place the existing caller on hold, then alternate between callers or abandon one of the calls. Call Waiting has three configurations depending on the station user's needs: (1) CW -Incoming only, (2) CW - Originating, or (3) CW - Terminating.

Conferencing (Three Way Calling) - allows a station to conduct the following configurations: (1) two other system stations, (2) one system station and one outside party, or (3) two outside parties.

Distinctive Ringing - provides for distinctive different rings at the called station to distinguish between a direct inward dialed (DID) call and an intra-group call.

Speed Calling (6-8) - allows each station user to place calls to its own previously designated electronic list of either 6 or 8 (depending on switch type) frequently dialed numbers.

Station Hunting - when the called station is busy, allows for the routing of the incoming call to an idle station in a prearranged hunt group.

Station-to-Station Dialing - allows a station user to dial another station within the same CentraNet® customer group using just the last four digits of the telephone number. Station-to-station dialing is not available within the feature package, but is available with the ISDN line.

III. SPECIAL CONDITIONS

B. DESCRIPTION OF SERVICES - Continued

CentraNet Feature Packages - Continued (N)

The following features, in addition to the ones defined above, are available from Feature Packages 2000 and 3000:

Automatic Call Back (Camp On) - allows a station reaching a busy condition on an internal call to be notified when that busy station becomes available and to be placed automatically in a "call back" mode. After invoking the Camp On feature, the station may make and receive calls, or make general use of the system. At the moment both stations are free, CentraNet® will call the originating station first and when the user answers, the system will call the camped-on station.

Call Park - allows a station engaged in a call to place the call into a holding condition for access from another station in the system. (Call Park differs from Call Hold in that the call placed on hold is associated with an index code, or in some systems a station number, and does not standby for access by the station which placed the call on hold. Call Park allows any station to dial a Call Park retrieval code to be connected to the held call.) Call Park is offered from digital switches only.

Last Number Redial - allows the user to redial his/her last manually dialed number by depressing a single key.

Toll Restriction - disallows the dialing of long distance calls. The Utility may provide predetermined toll restriction packages (i.e., restriction to local area code, restriction to Local LATA, etc.) which will restrict dialing to specific areas. (N)

CentraNet Feature Packages - Continued (N)

The following features, in addition to the ones defined above, are available from Feature Package 3000:

Automatic Route Selection/Flexible Route Selection (ARS/FRS) -automatically selects the most economical route to a destination. The customer controls and programs a predetermined routing pattern for WATS, Foreign Exchange, DDD trunks, etc.

Feature Package 3000 includes 3-digit routing to selectively route calls over two or more routes with a capacity of 8 patterns per customer group.

Remote Access to Features - allows a user who is away from the office to dial directly into the CentraNet® system (without attendant intervention) and gain complete access to CentraNet® system facilities and outgoing trunk circuits. The caller is required to have a "security access" code.

Message Detail Recording - provides a record to the customer of originating messages routed over tie lines and private lines under certain conditions, FX, WATS, CCSA, and/or exchange and toll network. It is not a source for billing detail.

(1) It includes the calling station number, called number, date, time of day, duration of call and type of facility routing.

(2) Call attempts over some FX facilities, whether completed or not, will be recorded. Message detail will not be provided for intra-CentraNet® customer group.

(3) Only one set of message detail on magnetic tape will be furnished for any one month.

(4) Message detail will be provided on magnetic tape only in the code terminology and data processing format used by the utility.

(5) Message detail for a call routed over a WATS trunk will include the called number, date, time of day, duration of call, type of facility routing and may include the calling station number. (N)

B. DESCRIPTION OF SERVICES - Continued

ISDN Basic Station Service - Continued (T)

Bridging allows a party to establish a conference call within a customer group by bridging into a call. Only one party can bridge into a call. Bridging can be inhibited by activating Manual Exclusion.

Call Forwarding allows a user to forward calls to a specified number.

Call Pickup allows a user to pick up a call directed to another station in the customer group.

Conference Calling allows a user to set up a conference call. Conference calls can include members of the customer group and parties outside the group. Up to six parties can be connected.

Drop. Allows a user to disconnect the last party added to a conference call.

B. DESCRIPTION OF SERVICES - Continued

ISDN Basic Station Service - Continued

Intercom Function allows a station set to emulate a dedicated connection to another station for priority conversations while permitting incoming calls or connection of active calls.

Key System Coverage for Analog Lines allows an analog station set to share calls with an ISDN station set.

Manual Exclusion allows a user to inhibit other stations from picking up calls on hold or from bridging onto calls. (See Privacy Release.)

Multi-Line Hunting allows an incoming call to "roll over" to an unused station when the number being called is busy or not being answered. (N) (N)

Multiple Directory Number provides access to more than one directory number.

Privacy Release allows a user to inhibit other stations from answering a call on hold or from bridging onto calls. (See Manual Exclusion.)

Ring Again allows a user to arrange for Automatic Callback on Busy when a busy number is encountered. When the busy station becomes idle, a distinctive ring alerts the caller. When the station set is taken off-hook, the call is placed.

Shared Call Appearances of a Directory Number allows several stations to share one or more directory numbers. Calls originating or terminating at one station will affect all stations sharing a directory number.

Speed Calling - Individual Short List permits the customer to dial selected telephone numbers using fewer digits than normally required. Access to a Speed Calling list is limited to an individual user, and a list can not be shared by other users.

Transfer allows a user to transfer a call to another directory number in the customer group.

X.25 One-Way Outgoing Logical Channel allows an ISDN subscriber to specify some number of the logical channels to be used only for calls that they originate. This feature is activated by service order.

X.25 Permanent Virtual Circuit allows packet switching to be implemented over a dedicated logical channel without needing call setup or clearing. The permanent virtual circuit is established by a service order.

Automatic Call Distribution-Management Information System (ACD/MIS)

Automatic Call Distribution (ACD) is a central office based service which allows customers' incoming calls to be equally distributed to their available agents. Distribution of the calls is determined by call parameters defined by the customer. ACD also allows the customer to manage fluctuations in call patterns, trunk loading, answering time patterns, and answering time frames.

Automatic Call Distribution can be enhanced with the extensive call handling and management capability of the Automatic Call Distribution-Management Information System (ACD/MIS). The Management Information System Data Link contains real-time call information that is forwarded from a Management Information System (MIS) located in the Company's central office. In turn, the MIS provides the customer with a global view of ACD call activities within the customer's call center. The information assists in evaluating traffic patterns, trunk utilization, agent efficiency and lost calls. At the supervisor level, ACD/MIS provides the ability to monitor agents, control the origination and destination of incoming calls and rearrange groups in response to incoming customer call demand.

[1] Service is grandfathered and limited to existing customers as of February 13, 2004. (N)

B. DESCRIPTION OF SERVICES - Continued

Automatic Call Distribution-Management Information System (ACD/MIS) - Continued (N)

Features - Continued

Access to Switched Network - Outbound call dialing permission ranging from total restriction to unrestricted access to the network.

Activate/Deactivate Position - Allows agents to activate their positions for availability to accept calls (activate or log on) or to deactivate (log off or make busy) their positions to not accept any new incoming calls. Deactivation occurs whenever a headset is unplugged. With this feature, no incoming calls are delivered to unavailable or unattended positions.

Additional Queue Slots - When the required number of Queue Slots needs to exceed the number of customer agents.

Agent Alerting and Call Origination Identification - Upon delivery of an incoming call, this feature provides an audible tone and a 10-character display of the dialed digits and/or the incoming trunk group.

Agent Event Codes - Allows agents, while on a call, to enter an -event code.a Event codes are set up to meet customer needs for tracking specific occurrences, such as types of billing questions, effectiveness of various types of advertising, customer demographics, etc. The frequency of the events are tabulated and reported on the Management Information System (MIS). (N)

III. SPECIAL CONDITIONS - Continued

B. DESCRIPTION OF SERVICES - Continued

Automatic Call Distribution-Management Information System (ACD/MIS) - Continued (N)

Features - Continued

Agent Monitoring with Interrupt - Allows the supervisor position the ability to monitor agent positions and to interrupt the monitored conversation.

Agent/Supervisor Assignment - Allows the assignment of a log in identification and password to each agent and supervisor, independent of their terminals.

Automatic Call Distribution - Distributes calls automatically to agents available for the longest period of time.

Call Hold Incoming/Outgoing - Allows the agent to place an incoming call on hold and have full use of the position to consult with another agent or supervisor or make an outside call. Call Hold Outgoing allows the agent to place an outgoing call on hold. If an incoming call is also on hold, the agent can go back and forth between the two parties on hold or the agent can conference all involved parties.

Call Prompts - An enhancement to Call Vectoring that is an announcement to guide incoming callers through a series of steps to route the call to an agent. The incoming caller responds to the steps by depressing a touch call digit on his telephone set.

Call Queuing - When all customer agents are busy, this feature ensures incoming calls are distributed in the order of arrival (first come, first serve) by entering the calls into queues. (N)

Continued

INTEGRATED SERVICES DIGITAL NETWORK SERVICES

B. DESCRIPTION OF SERVICES - Continued

Automatic Call Distribution-Management Information System (ACD/MIS) - Continued (N)

Features - Continued

Call Transfer Internal/External - Call Transfer Internal allows an agent to transfer a call to another agent or supervisor within a call center. Call Transfer External allows an agent to transfer a call outside of the call center.

Call Vectoring - Provides the ability to program a series of call handling steps that a call will follow before the call is connected to an agent. The series of steps is referred to as a call vector. The feature includes:

- Answer Supervision Control - Provides the ability to control the point at which answer supervision is returned for calls that are processed using call vectors.

- Music On Queue - Provides additional flexibility for the specification of music and/or other audio treatment of calls in queue.

Call Waiting Indicator - Causes an indication to appear on all agent terminals when the waiting interval of a call in queue exceeds a specified threshold.

Cancel Previous Entry - Allows an agent to delete previously entered digits.

Conference and Transfer on Outbound Calls - Allows an agent to conference an outbound call with another party and to transfer an outbound call to another party.

Direct Agent Access - Provides the ability for an external call to reach an agent directly. The agent position must be assigned an individual directory number. (N)

Continued

INTEGRATED SERVICES DIGITAL NETWORK SERVICES

III. SPECIAL CONDITIONS - Continued

B. DESCRIPTION OF SERVICES - Continued

Automatic Call Distribution-Management Information System (ACD/MIS) - Continued (N)

Features - Continued

Emergency Alert - Provides a single keystroke method of flagging calls of special interest or that require handling.

Enhanced Incoming Call Alerting - Provides and enhanced audible alert of an incoming call even when the agent is not wearing a headset. A visual alert accompanies the audible alert.

Interposition Conference - Allows an agent to conference with another agent or supervisor.

Intraflow - Allows the customer flexibility to increase the number of agents to handle incoming calls. This feature allows the customer to designate one principle serving team and up to eight supporting teams for each call queue.

Management Information System Data Link - Passes call event information to the Management Information System (MIS) located in the central office. This Data Link includes:

- Delay Treatment - Provides various types of alerting to the calling parties when their call cannot be routed immediately to an agent, i.e., the call is put in a queue.

- Fold Down - Provides for an orderly restriction of traffic to a smaller number of agent positions during periods of low incoming traffic.

- Interflow Control - Provides the ability to reroute incoming calls to destinations outside the switch.

- Intraflow Control - Provides a way of increasing the number of agents able to handle calls by specialized serving teams for call queues.

Automatic Call Distribution - Management Information System (ACD/MIS) - Continued

Features - Continued

Management Information System Data Link - Continued

- Overload Control - Promptly detects and properly controls an overload condition.

- Queue Control - Alerts the customer of queuing delays that have exceeded customer designated thresholds; through the MIS the customer can modify the ACD parameters in order to relieve the condition.

Music on Hold - Routes an incoming call placed on "hold" to be routed to an audio source which provides music.

Multipoint ACD - Allows two agents stations to be placed on one ACD line. Each station will use one B channel and share the D channel. (N) (N)

Position Release with Disconnect - Allows an agent to release the position from a call with one keystroke.

Queue Slots - Dedicated time slots used to hold incoming calls in a delayed state until an agent position becomes available. The number of queue slots must be equal to the number of agents.

Service Assistant Capabilities - Provides agents single keystroke access for assistance on difficult calls.

Standard Announcements - Provides audio announcement of answering delays to customers in queue. The announcement is provided by the Utility and located in the central office.

C. GENERAL

1. ISDN Services will be furnished only where facilities are available. ISDN Services are offered on a limited basis by specific switching systems within certain geographical areas. Since ISDN Services are not offered in all areas, it is important to verify their availability by contacting your Company account representative or Business Office at the telephone number listed in your telephone directory under the heading "Where to Reach GTE," for installations and service.

2. Services offered in accordance with this tariff are provided from central offices equipped with digital facilities. The availability of services and ability to provide services may vary among serving central offices.

3. Customer-provided equipment used in conjunction with services provided in accordance with this tariff must conform with the technical specifications of the Utility. (T)

4. The Utility may change telecommunications services, equipment, operations, or procedures while remaining consistent with the Federal Communications Commission's Rules and Regulations. If changes cause a customer's equipment or communications system to become incompatible with services or if changes cause terminal equipment to require modification or become less effective, the Utility shall not be responsible. Customers will be given notice, in writing, of forthcoming changes to network services that might affect terminal equipment or private communications systems.

5. End User Common Line charges as authorized by the FCC and Joint Board will apply.

6. Temporary disconnections (for vacations or other reasons) are not permitted.

7. Directory listings will be provided in accordance with the rates and conditions found elsewhere in the Utility's tariffs.

b. PRI Access Switched Facility System (N)

The PRI Access Switched Facility System configurations are offered on a contract term basis only. The nonrecurring charges applicable to the PRI Access Switched Facility Systems are the Initial Configuration Nonrecurring Charge and the Subsequent Activity Nonrecurring Charge.

(1) Initial Configuration Nonrecurring Charge: The Initial Configuration Nonrecurring Charge applies when a contract term PRI Access Switched Facility System is placed into service. One such nonrecurring charge is applicable for each PRI Access Switched Facility System.

(2) Subsequent Activity Nonrecurring Charge: The Subsequent Activity Charge applies when a change is made to the customer's contract term PRI Access Switched Facility System Service at the customer's request. This charge applies per customer location/serving central office basis to all changes in the configuration of the service other than an order of additional PRI Access Switched Facility Systems, in which case the Initial Configuration Nonrecurring Charge(s) applies.

(3) Charges:

	Nonrecurring Charges
Initial Database Configuration[1]	$440.00
Subsequent Activity[1]	176.00

[1] The Initial Configuration and Subsequent Activity Nonrecurring Charges apply to customers who select the contract term offerings of Local or Out of Calling Scope PRI Access Switched Facility System Service.

12. In compliance with D.96-10-066, GTE California will discount Switched Data Service to qualifying entities as follows: (L)(T)

Health Care Providers	20%
Schools and Libraries	50%
Community Based Organizations	25%

These discounted services may not be resold to, or shared with, any other non-qualifying person or entity.

Qualifying Entities

A. Health Care Providers - a discounted rate is applicable for municipal and county government owned and operated hospitals and health clinics.

B. Schools and Libraries - To qualify for the discount, schools must be public or nonprofit schools providing elementary or secondary education and which do not have endowments of more than $50 Million. Only those libraries which are eligible for participation in state based plans for funds under Title III of the Library Services and Construction Act qualify for the discount. There is no limit to the number of subsidized lines that a health care provider can have.

C. Community Based Organization (CBO) - In order to qualify for the discount, a CBO must provide proof at the time of application that it is a tax exempt organization. They must also certify that it offers health care, job training, job placement, or educational instruction. CBOs are limited to: (1) a total of two ISDN lines; **or** (2) one ISDN line and one Switched Data line; **or** (3) one T-1 line at the discounted rate; **or** (4) a total of two Switched Data lines. (L)

(L) Material previously shown on 2nd Revised Sheet 52.

INTEGRATED SERVICES DIGITAL NETWORK SERVICES

III. SPECIAL CONDITIONS - Continued

D. ISDN-BASIC RATE INTERFACE (BRI) SERVICES

1. BRI Services are digital exchange services which include station connections and network access.

2. BRI Services offered from this tariff include from two (2) to five hundred (500) parings of a BRI Line with either an ISDN Access Service or an ISDN Multipoint Access Service and with one variation of Central Office Elements. The Central Office Elements can be arranged in a variation suitable to customer requirements but will include no more than two B-Channel Elements and one D-Channel Element.

3. BRI Services provided on a Foreign Exchange basis are provided on an ICB basis. (C)

4. BRI Services provided in accordance with this tariff are available to customers requiring from two (2) to five hundred (500) BRI Lines. Customers requiring more than five hundred (500) lines will be provided service at rates and charges and with respect to conditions specified in individual agreements.

5. No more than one voice-type Service Package will be provided for each BRI Line, regardless of the number of voice-type B-Channels. Each Service Package is associated with a BRI Line, not with a channel.

6. Each BRI Line within a system may be uniquely arranged with one of several Service Packages and with any combination of B-Channels.

7. ISDN Access and ISDN Multipoint Access are services which terminate BRI Lines at the central office and permit access to the exchange network. One access (either ISDN Access or ISDN Multipoint Access) is required for each BRI Line.

INTEGRATED SERVICES DIGITAL NETWORK SERVICES

III. SPECIAL CONDITIONS - Continued

D. ISDN-BASIC RATE INTERFACE (BRI) SERVICES - Continued

8. An ISDN Access arranges a BRI Line for an individual user.

9. An ISDN Multipoint Access arranges a BRI Line for multiple users or arranges a BRI Line for more than one voice-type B Channel. (T)

10. The B Circuit Switched Data Channel (B-CSD) assigns circuit switched data traffic to one of the two B Channels of a BRI Line. The CSD channel operates at a maximum speed of 64 kbps (Switched 64 kbps) but may be used at a speed of 56 kbps (Switched 56 kbps). (T)

11. Both B Channels of a BRI Line may be arranged for B-CSD. (T)

12. Data sent to locations within a system and to interexchange carriers over B-CSD Channels can be transmitted at either 64 kbps or 56 kbps. (Some interexchange carriers do not offer transmission at 64 kbps.)

13. Data sent to locations within other systems must be transported at a speed of 56 kbps, if permitted. If permitted, the rates, charges, and conditions will be specified by the Utility's tariffs.

14. The B Voice/CSD Channel arranges a BRI Line with the capability to alternate transmission between Voice and Circuit Switched Data over the same B Channel. Both B Channels may be arranged for B Voice/CSD. (T) (T)

15. The D Packet [1] Switched Data Channel allows transmission of packet-switched data over a D Channel. Subscription to a D Packet element without subscription to B Channel elements is permitted. (T) (T)

16. B Packet service provided to customers who require packet switched data service to access the DPN100 public switched network is grandfathered as of February 13, 2004. Orders for the Communication Assistance for Law Enforcement Act (CALEA) will continue to be provisioned from 5ESS switches as access to the public switched network is not required. (N) (N)

[1] Service is grandfathered and limited to existing customers as of February 13, 2004. (N)

8. An ISDN Access arranges a BRI Line for an individual user.

9. An ISDN Multipoint Access arranges a BRI Line for multiple users or arranges a BRI Line for more than one voice-type B-Channel.

10. The B Circuit Switched Data Channel (B-CSD) assigns circuit switched data traffic to one of the two B-Channels of a BRI Line. The CSD channel operates at a maximum speed of 64 kbps (Switched 64 kbps) but may be used at a speed of 56 kbps (Switched 56 kbps).

11. Both B-Channels of a BRI Line may be arranged for B-CSD.

12. Data sent to locations within a system and to interexchange carriers over B-CSD Channels can be transmitted at either 64 kbps or 56 kbps. (Some interexchange carriers do not offer transmission at 64 kbps.)

13. Data sent to locations within other systems must be transported at a speed of 56 kbps, if permitted. If permitted, the rates, charges, and conditions will be specified by the Utility's tariffs.

14. The B-Voice/CSD Channel arranges a BRI Line with the capability to alternate transmission between Voice and Circuit Switched Data over the same B-Channel. Both B-Channels may be arranged for B-Voice/CSD.

15. The D-Packet Switched Data Channel allows transmission of packet-switched data over a D-Channel. Subscription to a D-Packet Element without subscription to B-Channel Elements is permitted.

17. Attendant Services (T)

a. Attendant Services require compatible customer-provided equipment. Functions performed with equipment at the customer's premises must conform with the Utility's operating practices and procedures in order to maintain service levels.

b. The Attendant Services package requires a single B-Voice Channel configuration on the BRI line.

18. Service Orders (T)

a. Temporary disconnections (for vacations or other reasons) and facility reservation of BRI services are not permitted.

b. Minimum Service Requirement - Subscribers will be billed a minimum equivalent to the rates for continuing service for three months and charges for establishing service. (T)

c. Directory Listings will be furnished in accordance with the rates and conditions of this tariff.

d. A change in service from CentraNet® or Basic Exchange Access Line services to BRI services is a discontinuation of service and an establishment of service. Termination liabilities will not apply to changes if the customer subscribes to the same number or to more lines. However, all applicable installation and service connection charges and all charges applicable to the establishment of BRI service apply.

e. A change in services will cause a temporary interruption of service.

19. Additional Telephone Numbers (T)

a. A primary telephone number is provided with each activated BRI channel. Additional telephone numbers may be ordered for each BRI line. Additional telephone numbers are available at the rate shown in this Schedule.

b. At least one additional telephone number is required for each Multipoint Access user.

c. One interexchange carrier must be selected for all telephone numbers associated with the same BRI Line, however, 10xxx access to other carriers is provided. All BRI Lines within the same business system need not be associated with the same carrier.

20. ISDN Multipoint Access (T)

a. Multipoint Access allows connecting from one to eight users on an individual BRI line.

b. Multipoint Access is required for connecting two B-Channel Elements for voice on the same BRI line.

c. Only one user will be allowed to access each B-Channel. Other users on the same BRI line can access the D-Channel only.

d. Up to eight users can share simultaneously the same D-Channel of a D-Channel packet switching arrangement.

e. Multipoint Access to a BRI line connecting an attendant's console is not permitted.

III. SPECIAL CONDITIONS - Continued

D. ISDN-BASIC RATE INTERFACE (BRI) SERVICES - Continued

21. Individual Line Loop Extension (T)

ISDN Individual Line Loop Extension provides a physical extension of the BRI loop from approximately 18,000 feet to approximately 36,000 feet when provided from an ISDN capable Central Office. This physical extension is accomplished by means of a CO installed power module and an outside plant installed regenerator or U-Repeater.

The deployment method is based upon dB loss and not on specific cable footage. The vendor installation information indicates that up to a 34dB loss at 40kHz in either direction of the field repeater is acceptable. With the Verizon engineering practice of maximum loss for the ISDN BRI loop to be 38dB at 40kHz, it is assumed, if the customer's distance would exceed the 38dB for standard installation, the U-Repeater would be mounted within stated range of 34dB and the customer's length would be extended another 34dB from the U-Repeater installation point.

The customer will not be charged the ISDN BRI Individual Line Loop Extension rate unless the equipment is actually used. The charge will not be invoked based on the cable footage. The power module is designed to be used only with the U-Repeater and the repeater can only be used with the power module. The appropriate Individual Line Loop Extension rate will apply in addition to rates for Basic Rate Interface and Single Line Services.

INTEGRATED SERVICES DIGITAL NETWORK SERVICES

III. SPECIAL CONDITIONS

E. ISDN-PRIMARY RATE INTERFACE SERVICE

1. General

Integrated Services Digital Network-Primary Rate Interface (ISDN-PRI) Service provides digital access for integrated services between the customer's premises and the serving central office via a 1.544 Mbps facility. ISDN-PRI denotes an end-to-end digital network capable of supporting a combination of public and private network access services. ISDN-PRI is an alternative for individual access services, such as Two Way, Direct Inward Dialing (DID), Direct Outward Dialing (DOD), 800 Service, OutWATS Service, and local business trunks. (T)

ISDN-PRI Service is available to customers where facilities permit. Customers must provide compatible premises switching equipment for terminating the D Channel and the 1.544 Mbps high capacity digital services facilities.

ISDN-PRI Service is typically divided in capacities of twenty-three 64 Kbps B Channels and one 64 Kbps D Channel (23B+D). The D Channel carries the out-of-band signaling required to control its associated B Channels on one or more 1.544 Mbps high capacity digital facilities where technology permits.

When requesting ISDN-PRI Service, the customer must specify the minimum and maximum number of channels to be used for exchange, access and data services as well as any other information needed for the Utility to provide service.

The availability and functionality of ISDN-PRI features and capabilities may vary by serving central office.

The minimum subscription period for each ISDN-PRI Service is one month.

ISDN-PRI Service may be provided from a Verizon alternative central office if a customer's serving central office is not suitably equipped, or if the customer chooses to subscribe to service from a different Verizon central office. The customer may be required to utilize the telephone numbers and dialing plan associated with the designated ISDN-PRI central office. Additional charges for High Capacity Digital Facility and Special Transport will apply to the Switched Facility between the customer's serving central office and the ISDN-PRI capable central office, except when the ISDN-PRI capable central office is part of a Remote Switching Cluster, as defined in III.A.

If a customer's ISDN-PRI Service interconnects with an Intermediary Customer (Interexchange Carrier or other service provider), PRI Access is permitted only within a single customer's ISDN-PRI Service arrangement. Access to the Telephone Company's exchange network or switched services is not permitted.

A primary telephone number is provided with each activated B Channel. Additional telephone numbers may be ordered for each B Channel. Additional telephone numbers for DID are available at the rates shown in this schedule.

Network Usage charges apply to the Term Option of ISDN-PRI Service in the same manner as they apply to the Month-to-Month Option.

III. SPECIAL CONDITIONS

E. ISDN-PRIMARY RATE INTERFACE SERVICES

1. One PRI Access is required for each PRI Line.

2. At the time a customer subscribes to ISDN-PRI service, the customer must specify the minimum and maximum number of channels to be used for exchange service, for access services, and for data services and must provide any other information needed for the Company to provide service.

3. A standard B-Channel includes IntraSystem Caller ID, and IntraSystem Clear Channel Capacity.

4. (D)
(D)

5. Month-to-month ISDN PRI Service and Local PRI Access Switched System Facility Service may be provided from an alternative central office within the local calling scope of the central office that would normally be used to provide local exchange access services to the customer, with the application of High Capacity Digital DS1 Special Transport per mile rates in addition to the other applicable ISDN PRI rates. Alternatively, MetroLAN-Special Transport rates may be used along with the appropriate MetroLAN C.O. Connect rate in addition to the other applicable ISDN PRI rates. These Special Transport Facility rates are found in schedule Cal. P.U.C. No. C-1. ISDN PRI Service may only be provided from an alternative C.O., that is outside of the local calling scope of the customer's normal C.O., with the application of the rates applicable with Out of Calling Scope (OOCS) PRI Access Switched Facility System Service. (C)

6. IC Channel Services will not be provided on a Call-by-Call Access basis. An IC Channel Service requires subscription to an interLATA Special Access Service. (L)

7. A primary telephone number is provided with each activated PRI channel. Additional telephone numbers may be ordered for each PRI Line. Additional telephone numbers for DID are available at the rates shown in this schedule. (L)

E. ISDN-PRIMARY RATE INTERFACE SERVICE - Continued

1. General - Continued

Termination Liability

Customers who subscribe to ISDN-PRI Service on the Term Option and terminate service prior to the anniversary date of the term commitment plan will be subject to termination liability charges. See Schedule Cal. P.U.C. No. D&R, Rule No. 47, for termination liability rules. Termination Liability does not apply to optional features. The termination liability charge will not apply when a customer converts from PRI Access and Facility to a PRI Access only when the PRI is connecting to an alternate high capacity facility (N)

2. Rate Elements

PRI Access Interface - PRI Access Interface provides the switch termination for the PRI Switched Facility. A PRI Access Interface is required to terminate to an ISDN-PRI serving central office. A PRI Access Interface typically provides twenty-three individual B Channels and one D Channel.

Switched Facility - The customer has a choice of service arrangements, (i.e., customer premises to local central office, local central office to alternative central office, or Tie Channel Services). The rates and charges for the Switched Facility will be based on the selected arrangement and will be comprised of one or a combination of the following rate elements:

a. Customer Premises to Local Central Office

Option 1 - PRI High Capacity Digital Facility plus Special Transport (T)
Option 2 - Alternate High Capacity Digital Facilities from appropriate Utility tariff

b. Local Central Office to ISDN-PRI Capable Alternative Central Office

Option 1 - PRI High Capacity Digital Facility plus Special Transport per airline mile or MetroLAN Special Transport. (T) (T)
Option 2 - Alternate High Capacity Digital Facilities from appropriate Utility tariff

c. Tie Channel Services

Tie Channel Service to customer premises or central office to central office
Tie Channel Service to Intermediary Customer

B Channel Configurations - B Channels can carry voice and circuit switched data at up to 64 Kbps for up to 24 B Channels. Channel activation monthly recurring charges will apply on a per channel basis. A primary telephone number is provided with each activated B Channel. Additional telephone numbers may be ordered for each PRI line. Additional telephone numbers for Two Way/DID/DOD Service are available at the rates specified in II.RATES. (T)

Termination Liability

Customers who subscribe to ISDN-PRI Service on the Term Option and terminate service prior to the anniversary date of the term commitment plan will be subject to termination liability charges. See Schedule Cal. P.U.C. No. D&R, Rule No. 47, for termination liability rules.

2. Rate Elements

PRI Access Interface - PRI Access Interface provides the switch termination for the PRI Switched Facility. A PRI Access Interface is required to terminate to an ISDN-PRI serving central office. A PRI Access Interface typically provides twenty-three individual B Channels and one D Channel.

Switched Facility - The customer has a choice of service arrangements, (i.e., customer premises to local central office, local central office to alternative central office, or Tie Channel Services). The rates and charges for the Switched Facility will be based on the selected arrangement and will be comprised of one or a combination of the following rate elements:

a. Customer Premises to Local Central Office

Option 1 - High Capacity Digital Facility plus Special Transport from Schedule Cal. P.U.C. No. C-1
Option 2 - Alternate High Capacity Digital Facilities from appropriate Utility tariff

b. Local Central Office to ISDN-PRI Capable Alternative Central Office (T)

Option 1 - High Capacity Digital Facility plus Special Transport per airline mile or MetroLAN Special Transport from Schedule Cal. P.U.C. No. C-1
Option 2 - Alternate High Capacity Digital Facilities from appropriate Utility tariff

c. Tie Channel Services

Tie Channel Service to customer premises or central office to central office
Tie Channel Service to Intermediary Customer

B Channel Configurations - B Channels can carry voice and circuit switched data at up to 64 Kbps for up to 24 B Channels. Channel activation monthly recurring charges will apply on a per channel basis. A primary telephone number is provided with each activated B Channel. Additional telephone numbers may be ordered for each PRI line. Additional telephone numbers for DID/DOD Service are available at the rates specified in II.RATES.

Termination Liability

Customers who subscribe to ISDN-PRI Service on the Term Option and terminate service prior to the anniversary date of the term commitment plan will be subject to termination liability charges. See Schedule Cal. P.U.C. No. D&R, Rule No. 47, for termination liability rules.

2. Rate Elements

PRI Access Interface - PRI Access Interface provides the switch termination for the PRI Switched Facility. A PRI Access Interface is required to terminate to an ISDN-PRI serving central office. A PRI Access Interface typically provides twenty-three individual B Channels and one D Channel.

Switched Facility - The customer has a choice of service arrangements, (i.e., customer premises to local central office, local central office to alternative central office, or Tie Channel Services). The rates and charges for the Switched Facility will be based on the selected arrangement and will be comprised of one or a combination of the following rate elements: (T)

a. Customer Premises to Local Central Office

Option 1 - High Capacity Digital Facility plus Special Transport from Schedule Cal. P.U.C. No. C-1
Option 2 - Alternate High Capacity Digital Facilities from appropriate Utility tariff

b. Local Central Office to ISDN-PRI Capable Alternative Central Office Within the Same Exchange

Option 1 - High Capacity Digital Facility plus Special Transport per airline mile or MetroLAN Special Transport from Schedule Cal. P.U.C. No. C-1
Option 2 - Alternate High Capacity Digital Facilities from appropriate Utility tariff

c. Tie Channel Services (N)

Tie Channel Service to customer premises or central office to central office (N)
Tie Channel Service to Intermediary Customer (T)

B Channel Configurations - B Channels can carry voice and circuit switched data at up to 64 Kbps for up to 24 B Channels. Channel activation monthly recurring charges will apply on a per channel basis. A primary telephone number is provided with each activated B Channel. Additional telephone numbers may be ordered for each PRI line. Additional telephone numbers for DID/DOD Service are available at the rates specified in II.RATES.

Termination Liability (C)

Customers who subscribe to ISDN-PRI Service on the Term Option and terminate service prior to the anniversary date of the term commitment plan will be subject to termination liability charges. See Schedule Cal. P.U.C. No. D&R, Rule No. 47, for termination liability rules. (C)

2. Rate Elements (N)

PRI Access Interface - PRI Access Interface provides the switch termination for the PRI Switched Facility. A PRI Access Interface is required to terminate to an ISDN-PRI serving central office. A PRI Access Interface typically provides twenty-three individual B Channels and one D Channel. (C)

Switched Facility - The customer has a choice of service arrangements, (i.e., customer premises to local central office, local central office to alternative central office, or Intermediary Customer Services). The rates and charges for the Switched Facility will be based on the selected arrangement and will be comprised of one or a combination of the following rate elements:

a. Customer Premises to Local Central Office

Option 1 - High Capacity Digital Facility plus Special Transport from Schedule Cal. P.U.C. No. C-1
Option 2 - Alternate High Capacity Digital Facilities from appropriate Utility tariff

b. Local Central Office to ISDN-PRI Capable Alternative Central Office Within the Same Exchange

Option 1 - High Capacity Digital Facility plus Special Transport per airline mile or MetroLAN Special Transport from Schedule Cal. P.U.C. No. C-1
Option 2 - Alternate High Capacity Digital Facilities from appropriate Utility tariff

c. Intermediary Customer Services

B Channel Configurations - B Channels can carry voice and circuit switched data at up to 64 Kbps for up to 24 B Channels. Channel activation monthly recurring charges will apply on a per channel basis. A primary telephone number is provided with each activated B Channel. Additional telephone numbers may be ordered for each PRI line. Additional telephone numbers for DID/DOD Service are available at the rates specified in II.RATES. (C)

8. Termination Liability

See Schedule Cal. P.U.C. No. D&R, Rule No. 47, for termination liability rules. (C)

9. Reserved for future use. (T)

10. Where the customer's normal C.O. is not capable of providing ISDN PRI service, Month-to-Month ISDN PRI service or Local PRI Access Switched Facility System service may be provided from an alternative C.O. (determined by the Utility), even if that C.O. is outside of the local calling scope of the customer's normal C.O. When Month-to-Month ISDN PRI service or Local PRI Access Switched Facility System service is provided from an alternative C.O., High Capacity Digital DS1 Special Transport Terminations and High Capacity Digital DS1 Special Transport per mile rates will apply in addition to the other applicable ISDN PRI rates. Alternatively, MetroLAN - Special Transport rates may be used along with the appropriate MetroLAN C.O. Connect rate in addition to the other applicable ISDN PRI rates where MetroLAN is available.

11. PRI Access Switched Facility System Service is a bundled rate contract term offering of ISDN PRI Service. It includes support for Non-Facility Associated Signaling (NFAS), Call-by-call, and Backup "D" Channels at no additional cost. NFAS and Backup "D" Channel capability are only available through subscription to contract term PRI Access Switched Facility System Service.

E. ISDN-PRIMARY RATE INTERFACE SERVICES - continued

8. Termination liabilities will not apply to changes from Digital Channel Service to PRI, if the customer subscribes to an equivalent or greater amount of service. However, all applicable installation and service connection charges and all charges applicable to the establishment of PRI service apply.

9. A contract termination charge will apply if service is discontinued prior to the contract period. The monthly reduction in the contract termination liability is equal to the Monthly Recurring Charge for the period. (N)

10. Where the customer's normal C.O. is not capable of providing ISDN PRI service, Month-to-Month ISDN PRI service or Local PRI Access Switched Facility System service may be provided from an alternative C.O. (determined by the Utility), even if that C.O. is outside of the local calling scope of the customer's normal C.O. When Month-to-Month ISDN PRI service or Local PRI Access Switched Facility System service is provided from an alternative C.O., High Capacity Digital DS1 Special Transport Terminations and High Capacity Digital DS1 Special Transport per mile rates will apply in addition to the other applicable ISDN PRI rates. Alternatively, MetroLAN - Special Transport rates may be used along with the appropriate MetroLAN C.O. Connect rate in addition to the other applicable ISDN PRI rates where MetroLAN is available.

11. PRI Access Switched Facility System Service is a bundled rate contract term offering of ISDN PRI Service. It includes support for Non-Facility Associated Signaling (NFAS), Call-by-call, and Backup "D" Channels at no additional cost. NFAS and Backup "D" Channel capability are only available through subscription to contract term PRI Access Switched Facility System Service. (N)

Database Configurations - Nonrecurring charges for database configuration apply on a per service order basis for both the Month-to-Month Option and the Term Option of ISDN-PRI.

a. Month-to-Month Option - Database configuration charges for the Month-to-Month Option apply to both initial and subsequent service orders for the following rate elements:

(1) PRI Access Interface, each
(2) Channel, per type (regardless of quantity)

b. PRI Access Switched Facility System - Term Option -. Database configuration charges for the Term Option apply per PRI Access Switched Facility System as follows:

(1) Initial Service Order - Applicable per initial and subsequent orders of PRI Access Switched Facility System.
(2) Subsequent Service Order - Applicable to all changes made to PRI Access Switched Facility System.

c. PRI Access System - Term and Volume Option - The Database Configuration Charge for Initial Service Order in II.B.2.c.(1) does not apply for the initial order on a 1-, 2- or 3-Year Term and Volume Option or a 2- or 3-Year Corporate Rewards Plan. Database configuration charges for the Term and Volume Option or the 2- or 3-Year Corporate Rewards Plan apply to Subsequent Service Orders only, per PRI Access Switched Facility System. (N)

d. Optional Features - Nonrecurring charges do not apply if optional features are ordered with initial ISDN-PRI installation. ISDN-PRI CentraNet® Access or ISDN-PRI VOIP CentraNet® Access nonrecurring charges as set forth in Schedule Cal. P.U.C. No. A-2, B.7 or B.8 always apply. Tie Channels are in addition to the normal channel charges. If optional feature(s) is added to an existing PRI System, the Subsequent Service Order charge in II.B.2.c(2) will apply per PRI Access Switched Facility System.

Database Configurations - Nonrecurring charges for database configuration apply on a per service order basis for both the Month-to-Month Option and the Term Option of ISDN-PRI.

a. Month-to-Month Option - Database configuration charges for the Month-to-Month Option apply to both initial and subsequent service orders for the following rate elements:

(1) PRI Access Interface, each
(2) Channel, per type (regardless of quantity)

b. Term Option - Database configuration charges for the Term Option apply per PRI Access Switched Facility System as follows:

(1) Initial Service Order - Applicable per initial and subsequent orders of PRI Access Switched Facility System.
(2) Subsequent Service Order - Applicable to all changes made to PRI Access Switched Facility System.

f. Term and Volume Option - The Database Configuration Charge for Initial Service Order in II.B.2.c.(1) does not apply for the initial order on a 2- or 3-Year Term and Volume Option. Database configuration charges for the Term and Volume Option apply to Subsequent Service Orders only, per PRI Access Switched Facility System. (L) (N)

Other Special Conditions apply as follows:

(1) The PRI Access Term and Volume Packages include the PRI Access, standard features and channel activations. Packages are available with or without the DS1 Switched Facility and are offered as measured usage/data channels.

(2) Customers on a 2-Year Term and Volume Option may subscribe to PRI facilities and services at 3-year term rates when 2-year rates are not available.

(3) Customers with existing ISDN-PRI contracts may convert to a new contract option without incurring termination liability charges, provided the value of the new contract is equal to or greater than the remaining value of the existing contract option. (L)

(4) All of a customer's Company provided PRIs within the state will count towards the volume option threshold. Term and Volume option customers may change the number of PRIs during the volume term period. In the event that a customer on a Term and Volume option makes subsequent PRI increases or decreases that cause the total number of PRIs to fall within a different threshold level, all remaining PRIs will be billed at the applicable threshold level rate for the remainder of the term and volume period. The customer must provide the account information of the PRIs included in the Term and Volume option at the time of the initial installation of service and with each change to the service. (N)

(2) Subsequent Service Order - Applicable to all changes made to PRI Access Switched Facility System.

Intermediary Customer Services

The rate for Intermediary Customer Services applies only to ISDN-PRI facilities that extend from the ISDN-PRI serving central office to the Intermediary Customer. In order to send calls to the Intermediary Customer, local loop access from the customer's premises to the customer's ISDN-PRI serving central office is also needed (e.g., CentraNet®, DID trunk, DOD trunk, or Call-by-Call trunk).

Alternative Central Office

Both the Month-to-Month Option and the Term Option of ISDN-PRI Service may be provided from a Verizon alternative central office if a customer's serving central office is not suitably equipped, or if the customer chooses to subscribe to service from a different Verizon central office within the same exchange. Additional charges for High Capacity Digital Facility and Special Transport are applicable to the Switched Facility between the customer's serving central office and the ISDN-PRI capable central office. In MetroLAN designated serving areas, the MetroLAN Special Transport rate may be used in lieu of the rate for Special Transport per airline mile. (C)

(L) Out of Calling Scope material previously on this page moved to original Sheet 66.2.

III. SPECIAL CONDITIONS - continued

E. ISDN-PRIMARY RATE INTERFACE SERVICES - continued

12. The Local PRI Access Switched Facility System bundled rate is the only rate applicable for most contract term PRI Services. It includes the PRI Facility between the local central office (C.O.) and the customer's premises and a PRI Access Interface with all channels activated. If the customer's service requires Intermediary Customer Services Channels additional channel rates will apply. If the customer's service is provided from an alternative C.O., that is within the local calling scope of the C.O. that would normally be used to provide local exchange access services, additional rates will apply for the High Capacity Digital DS1 Facility necessary to transport the service from the alternative C.O. to the normal C.O. (N)

13. The Out of Calling Scope (OOCS) PRI Access Switched Facility System bundled rate is applicable when the customer's service is provided from a C.O. that is outside of the local calling scope of the C.O. that would normally be used to provide local exchange access services to the customer. Additional OOCS Special Transport will apply on a per airline basis for the necessary High Capacity DS1 Transport between the OOCS C.O. and the customer's normal C.O. If the customer's service requires Intermediary Customer Services Channels additional channel rate will apply.

14. ISDN PRI Service may only be provided from an alternative C.O. outside of the calling scope of the C.O. that would normally be used to service the customer, with Out of Calling Scope PRI Access Switched Facility System Service. ISDN PRI Service from a C.O. that is outside of the calling scope of the customer's normal C.O. is not available under the Month-to-Month offering of ISDN PRI Service.

15. Network usage charges are applicable to the PRI Access Switched Facility System offerings of ISDN PRI Service in the same manner as they apply to the Month-to-Month offering of ISDN PRI Service. (N)

Tie Channel Service to Intermediary Customers

The rate for Tie Channel Service to Intermediary Customers applies only to ISDN-PRI facilities that extend from the ISDN-PRI serving central office to the Intermediary Customer. In order to send calls to the Intermediary Customer, local loop access from the customer's premises to the customer's ISDN-PRI serving central office is also needed (e.g., CentraNet®, Two Way, DID trunk, DOD trunk, or Call-by-Call trunk). ISDN-PRI CentraNet® Access or ISDN-PRI VOIP CentraNet® Access nonrecurring charges as set forth in Schedule Cal. P.U.C. No. A-2, B.7 or B.8 always apply. Tie Channels are in addition to the normal channel charges. (T)

Alternative Central Office

Both the Month-to-Month Option and the Term Option of ISDN-PRI Service may be provided from a Verizon alternative central office if a customer's serving central office is not suitably equipped, or if the customer chooses to subscribe to service from a different Verizon central office. The customer may be required to utilize the telephone numbers and dialing plan associated with the designated ISDN-PRI central office. Additional charges for High Capacity Digital Facility and Special Transport are applicable to the Switched Facility between the customer's serving central office and the ISDN-PRI capable central office, except when the ISDN-PRI capable central office is part of a Remote Switching Cluster, as defined in III.A. In MetroLAN designated serving areas, the MetroLAN Special Transport rate may be used in lieu of the rate for Special Transport per airline mile.

Out of Calling Scope [1]

The following charges are applicable with Out of Calling Scope:

a. Out of Calling Scope High Capacity Digital Facility
b. Out of Calling Scope Special Transport

The Out of Calling Scope arrangement provides for ISDN-PRI Service from an alternative central office in a different exchange than the exchange the customer's serving central office is located in. The Out of Calling Scope arrangement is applicable only to the ISDN-PRI Term Option. If the customer requests ISDN-PRI Service from a different Verizon central office, the dialing plan associated with that central office will be utilized.

[1] Out of Calling Scope PRI Access Switched Facility System is grandfathered and no longer available to new customers as of August 17, 2007. Existing customers on a term plan may continue their service until their term expires or their service is disconnected, whichever occurs first. Moves, additions or changes will not be permitted.

a. Out of Calling Scope High Capacity Digital Facility
b. Out of Calling Scope Special Transport

The Out of Calling Scope arrangement provides for ISDN-PRI Service from an alternative central office in a different exchange than the exchange the customer's serving central office is located in. The Out of Calling Scope arrangement is applicable only to the ISDN-PRI Term Option. If the customer requests ISDN-PRI Service from a different Verizon central office, the dialing plan associated with that central office will be utilized.

[1] Out of Calling Scope PRI Access Switched Facility System is grandfathered and no longer available to new customers as of August 17, 2007. Existing customers on a term plan may continue their service until their term expires or their service is disconnected, whichever occurs first. Moves, additions or changes will not be permitted. Tie Channel Service to Intermediary Customers

The rate for Tie Channel Service to Intermediary Customers applies only to ISDN-PRI facilities that extend from the ISDN-PRI serving central office to the Intermediary Customer. In order to send calls to the Intermediary Customer, local loop access from the customer's premises to the customer's ISDN-PRI serving central office is also needed (e.g., CentraNet®, DID trunk, DOD trunk, or Call-by-Call trunk).

Alternative Central Office

Both the Month-to-Month Option and the Term Option of ISDN-PRI Service may be provided from a Verizon alternative central office if a customer's serving central office is not suitably equipped, or if the customer chooses to subscribe to service from a different Verizon central office within the same exchange. The customer may be required to utilize the telephone numbers and dialing plan associated with the designated ISDN-PRI central office. Additional charges for High Capacity Digital Facility and Special Transport are applicable to the Switched Facility between the customer's serving central office and the ISDN-PRI capable central office, except when the ISDN-PRI capable central office is part of a Remote Switching Cluster, as defined in III.A. In MetroLAN designated serving areas, the MetroLAN Special Transport rate may be used in lieu of the rate for Special Transport per airline mile.

Out of Calling Scope

The following charges are applicable with Out of Calling Scope:

a. Out of Calling Scope High Capacity Digital Facility
b. Out of Calling Scope Special Transport

The Out of Calling Scope arrangement provides for ISDN-PRI Service from an alternative central office in a different exchange than the exchange the customer's serving central office is located in. The Out of Calling Scope arrangement is applicable only to the ISDN-PRI Term Option. If the customer requests ISDN-PRI Service from a different Verizon central office, the dialing plan associated with that central office will be utilized.

Out of Calling Scope (C) (L)

The following charges are applicable with Out of Calling Scope:

a. Out of Calling Scope High Capacity Digital Facility
b. Out of Calling Scope Special Transport

The Out of Calling Scope arrangement provides for ISDN-PRI Service from an alternative central office in a different exchange than the exchange the customer's serving central office is located in. The Out of Calling Scope arrangement is applicable only to the ISDN-PRI Term Option. If the customer requests ISDN-PRI Service from a different Verizon central office, the dialing plan associated with that central office will be utilized. (C) (L)

3. Features (N)

Call-by-Call Access - A customer-specified arrangement of B Channels used to access services available in the ISDN-PRI serving central office switch. The customer will be allowed to mix dedicated services and Call-by-Call Access on the same ISDN-PRI Service. To utilize Call-by-Call Access, the customer must specify, at subscription time, the quantities of channels that will be utilized for a specific service on the ISDN-PRI Service. The B Channels will be assigned and billed the maximum quantity specified. With this feature, separate facilities are not required for individual services, such as DID/DIOD, WATS, 800 Services, and local switched access lines. Call-by-Call Access is included in the Term Option of ISDN-PRI at no additional charge. Intermediary Customer Services will not be provided on a Call-by-Call Access basis. Intermediary Customer Services require subscription to an interLATA Special Access Service.

Clear Channel Capability - Clear Channel Capability allows the customer to transport 64 Kbps over the PRI channels with no constraint on the quantity or sequence of bits using the "Bipolar with Eight Zero Substitution" method of providing bit sequence independence. A standard B Channel includes Clear Channel Capability.

D Channel Backup - In arrangements of two or more ISDN-PRI's, D Channel Backup provides enhanced continuity of service by allowing a D Channel of one ISDN-PRI to automatically take over for a failed D Channel of another ISDN-PRI. D Channel Backup is included in the Term Option of ISDN-PRI at no additional charge. D Channel Backup is not available with the Month-to-Month Option of ISDN-PRI. (N)

3. Standard Features (T)

Call-by-Call Access - A customer-specified arrangement of B Channels used to access services available in the ISDN-PRI serving central office switch. The customer will be allowed to mix dedicated services and Call-by-Call Access on the same ISDN-PRI Service. To utilize Call-by-Call Access, the customer must specify, at subscription time, the quantities of channels that will be utilized for a specific service on the ISDN-PRI Service. The B Channels will be assigned and billed the maximum quantity specified. With this feature, separate facilities are not required for individual services, such as DID/DIOD, WATS, 800 Services, and local switched access lines. Call-by-Call Access is included in the Term Option of ISDN-PRI at no additional charge. Intermediary Customer Services will not be provided on a Call-by-Call Access basis. Intermediary Customer Services require subscription to an interLATA Special Access Service.

Clear Channel Capability - Clear Channel Capability allows the customer to transport 64 Kbps over the PRI channels with no constraint on the quantity or sequence of bits using the "Bipolar with Eight Zero Substitution" method of providing bit sequence independence. A standard B Channel includes Clear Channel Capability.

D Channel Backup - In arrangements of two or more ISDN-PRI's, D Channel Backup provides enhanced continuity of service by allowing a D Channel of one ISDN-PRI to automatically take over for a failed D Channel of another ISDN-PRI. D Channel Backup is included in the Term Option of ISDN-PRI at no additional charge. D Channel Backup is not available with the Month-to-Month Option of ISDN-PRI.

Caller ID - Caller ID provides for the display of the incoming call station number. (T)

Non-Facility Associated Signaling (NFAS) - NFAS allows the D Channel signaling entity to assign calls to channels on more than one interface (including the one containing the D Channel). The collection of these B Channels and the controlling D Channel is called a PRI group. Up to 20 DS1 Facilities can be assigned to a PRI group. NFAS is included in the Term Option of ISDN-PRI at no additional charge. NFAS is not available with the ISDN-PRI Month-to-Month Option of ISDN-PRI.

4. Optional Features

Calling Line Identification (CLID) with Name - CLID with Name allows the customer to have access to the Executive Directory number and name of the calling party. Compatible CPE is required. CLID with Name is available only where facilities and conditions permit. CLID with Name is available on a Month-to-Month basis or on a 1, 2, 3, or 5 Year Term.

Two B Channel Transfer – The Two B Channel feature allows the CPE user to accept a call and to subsequently transfer the call to a user inside or outside the CPE. Both the incoming and outgoing B Channels are then released for another call. Two B Channel Transfer is available only where facilities and conditions permit. (N)

PRI Station Detail Billing - Station Detail Billing provides individual station call details for all stations utilizing a customer's ISDN Primary Service at an account level on a monthly basis. Details are provided with the customer bill or via the Internet on the Verizon Communications, Inc. website. (N)

PRI Station Detail Billing is only available with measured-rate service.

Individual PRI Station Call Detail is for informational purposes only. Exact billing information is located in the Measured Call Summary portion of the customer's bill.

The customer's ISDN Primary Service must be equipped with Calling Party Default Directory Number with the Calling Party Screening option. Customers will not have the option to change the Calling Party Number and CPN may not be deleted.

Customers will have the option to define a partial listing in the screening list. Specific call details will not be provided for stations not included in the screening list. The screening list may not include 800 numbers, fictitious numbers, private network numbers or CentraNet® Dialing Plan numbers defined in the screening tables.

Station Call Details will only be provided for valid telephone numbers within the switch providing the customer's ISDN Primary Service. (N)

F. DIGITAL (ISDN) SINGLE LINE SERVICES

1. Digital (ISDN) Single Line Service is intended for customers requiring ISDN access on a single line basis. All regulations associated with ISDN-Basic Rate Interface Services, except the regulation specifying a minimum line requirement, apply to Digital (ISDN) Single Line Service.

2. Digital (ISDN) Single Line Service is available to residence customers [1] on either a flat-rate or measured-rate basis for voice network calling. All data calls will be measured. In the event that a residential customer [1] chooses flat-rate voice service, the data usage rates that are applicable are the Measured Rate Service - Local Calling Rates (Schedule Cal. P.U.C. No. A-1). (T) (T)

3. Digital (ISDN) Single Line Service for business customers will be provided on a measured-rate basis for voice and data calling.

4. Customers who require intercom functionality may subscribe to Basic Rate Interface (BRI) Services. Residence customers [1] will be converted to BRI by discontinuing Digital (ISDN) Single Line Service and establishing BRI Service. Business customers will be migrated to BRI through a subsequent order process. (T)

5. Residence flat-rate customers who convert to BRI will be charged measured-rate service for voice and data calling.

G. DISCOUNTS FOR QUALIFYING ENTITIES

See Schedule Cal. P.U.C. No. T-1 for qualifications and discounts for Schools, Libraries, Health Care Providers, and Community Based Organizations.

[1] Residence Single Line Service is grandfathered and limited to existing customers at existing locations as of February 10, 2005. Moves, additions, or changes will not be permitted. (N) (N)
