VIDEO CONNECTSMSERVICE

V. GENERAL

A. Definitions

Asynchronous Transfer Mode (ATM) - A very high speed, cell based, switched, broadband transmission technology based on a fixed-length 53 byte cell. (T)

Cell - The smallest unit of transport associated with the cell relay network. A cell is composed of 53 bytes.

CODEC - A piece of equipment for Coding and DECoding analog video signals to or from digital. The CODEC is the demarcation point between the Utility's network and any customer premises equipment.

Kilocell - One thousand cells.

Gigacell - One billion cells.

Switched Point of Termination (SPOT) - The location at which the video session terminates (i.e. VCAL or Port), and as such may vary from session to session.

Video Multi Point Control Unit (MCU) - A piece of equipment that enables switching of video signals from site to site.

VIDEO CONNECT SERVICE

V. GENERAL

B. Description

1. Video Connect_ service is the movement, management, and control of moving pictures or video frames of information along with associated audio.
2. Video Connect_ service is available in several transmission/ quality levels which correspond to varying customer requirements for video services. These are:

Broadcast Quality
Commercial Quality
Business Quality

(a) Broadcast Quality

Video Connect_ Broadcast Quality service provides transmission capability which supports a picture quality that meets or exceeds performance requirements. Broadcast Quality transmits from one to four associated audio signals along with the video signal. Customers may select channel interface options to meet their specific requirements. Broadcast Quality may employ one of two types of network facilities to complete the customer circuit: Type I (analog) and Type II (digital).

- (1) Type I service uses high quality analog transmit and receive units, however, the lack of industry standards still requires that units on each end of the video path be compatible with each other's proprietary signaling algorithms. Type I service includes two audio channels with up to 15 KHz bandwidth.
- (2) Type II service uses high quality codecs with a digital interface of 44.736 Mbps to support NTSC baseband video along with up to four associated audio channels with 15 KHz bandwidth. Because there is no industry standard algorithm for digitally encoding Broadcast Quality Type II television signals, the codec must decode the proprietary algorithm used by the transmit codec.

Resolution No.

VIDEO CONNECTsm SERVICE

V. GENERAL - Continued

B. Description - Continued

2. - Continued

(b) Commercial Quality

Video Connect_ Commercial Quality service provides for transmission facilities which support a picture quality that is near the performance requirements of NTCS video but is not of as high a quality as Broadcast Quality video. A Commercial Quality service may employ one of two types of network facilities to complete the customer circuit: Type I (analog) and Type II (digital).

- (1) Type I service employs analog transmit and receive units along with analog network facilities to support the video signals and two associated audio channels with 12 KHz bandwidth.
- (2) Type II service employs high quality codecs with a digital interface of 44.736 Mbps and digital network facilities to support the video signals and up to four audio channels with up to 15 KHz bandwidth.

Because there are no industry standard algorithms for the transmission of analog or digitally encoded video signals, the codecs on each end of a video circuit must be compatible with each other's proprietary signaling protocol.

Resolution No.

VIDEO CONNECTsm SERVICE

V. GENERAL - Continued

B. Description - Continued

2. - Continued

(c) Business Quality

Video Connectsm Business Quality service provides transmission facilities which utilize compressed video transmission techniques capable of transmitting good picture quality. A single audio channel with a frequency response to 7 KHz is provided with each video circuit. Business Quality video is suitable for teleconferencing between two geographically separate locations. Two types of Business Quality service are offered, Type I and Type II. Both types utilize digital facilities to provide two-way, two-point service

- (1) Type I service uses a transmission bandwidth of 384 Kbps which supports picture quality that is visually comparable to commercial quality video, but has less stringent technical parameters. Type I service has a noticeable motion impairment.
- (2) Type II service uses a transmission bandwidth of 1.544 Mbps to support a picture quality that is visually comparable to commercial quality video, but has less stringent technical parameters.

3. Customer Provided Equipment

By subscription to a Video Connectsm Access Thine (VCAL), the customer is provided with circuit equipment and outside plant facilities from the serving wire center (SWC) to the designated customer's location and a codec at the designated location. The customer must provide all customer premises equipment at each end of the network, such as cameras, monitors, audio and graphics equipment.

VIDEO CONNECTsm SERVICE

V. GENERAL - Continued

B. Description - Continued

4. Rate Elements

- (a) The Video Connectsm service is composed of the following basic rate elements:

Video Connectsm Access Line (VCAL)
Video Connectsm Access Port
Video Connectsm Transport
Video Connectsm Utilization
Video Connectsm Premium Services

Video Connectsm service offers two different methods to reach the Video Connectsm resources that provide transport, and in some cases, management and control of a video call. One, the Video Connectsm Access Line (VCAL) includes video-enabling equipment along with circuit and outside plant facilities to access the customer's SWC. The other, Video Connectsm Access Port does not include the video-enabling equipment as part of the network service.

- (b) Each Video Connectsm interconnection between customer locations requires that at least one of the locations be served by a VCAL, to provide video transmission and/or reception and to allow the Utility to monitor and meet the technical parameters of the service.

VIDEO CONNECTSM SERVICE

V. GENERAL - Continued

B. Description - Continued

4. Rate Elements - Continued

- (c) Video ConnectSM Transport includes transport and termination of the interoffice transmission of the customer's transmission Video ConnectSM signals. Applications include video transport between a customer's SWC and the associated Video Multipoint Control Unit (MCU) and video transport between SWCs.
- (d) Video ConnectSM Utilization includes high and low level video switching elements, video network control elements and trunking facilities. High and low level video switching elements refer to the use of Video Multipoint Control Units (MCU), Digital Cross Connect Units (DCC), or Asynchronous Transfer Mode (ATM) facilities. These switching facilities are included in the basic (T) video network as required to meet the service requirements for Type II Broadcast and Commercial Quality Video ConnectSM services within the LATA
- (e) Video ConnectSM Premium Services are optional services that are not part of a basic video interconnection between customer locations. Video ConnectSM Premium Services currently include Quad Split and Image Plus Still FrameTM. Quad Split allows one customer location to view the video transmissions from up to three other locations a multipoint connection on a single monitor over a single Video ConnectSM Access Line (VCAL). Image Plus Still FrameTM provides for the transmission of a still frame (such as a graphics overhead) and the motion video image over a single VCAL.

VIDEO CONNECTsm SERVICE

V. GENERAL - Continued

B. Description - Continued

5. Ordering Service

- (a) When Video Connectsm Service is ordered, the customer selects a VCAL or Port with consideration to the customer's specific video communications requirements. These requirements include, but are not limited to, the transmission parameters, the Video Connectsm Premium Services that are available with that type of access line and whether or not the desired service is a fixed point-to-point service or a switched service.
- (b) Each form of Video Connectsm Service is a type of Video Connectsm Service. The identification of a type of service as Broadcast, Commercial or Business Quality is not intended to limit a customer's use of that of VCAL or Port and the associated utilization and/or transport. The type nomenclature is intended to provide general guidance as to the quality of video transmission and its typical use. So long as the components of Video Connectsm service are utilized in the transmission, a customer can transmit any signals that the customer premises equipment (CPE) will support. For example, if the customer's CPE is capable of transmitting voice over a subscribed Video Connectsm services there is no restriction against doing so provided that the components of the Video Connectsm service are used in the transmission. The Utility does not warrant such alternative uses of the service nor guarantee that changes will not be made in the service that may negate these uses.

VIDEO CONNECTsm SERVICE

V. GENERAL - Continued

B. Description - Continued

6. Service Elements

(a) Video Connectsm Access Line (VCAL)

The Video Connectsm Access Line (VCAL) rate applies for each customer designated location at which a VCAL is terminated. The charge will apply even if the customer designated location and the SWC are co-located in a Utility building. The applicable VCAL rate is determined by the type of Video Connectsm service that the customer orders and receives at the Customer's designated location. This VCAL rate provides for the Video Connectsm service connection between the network demarcation point at the customer's premises and the Utility's SWC. The Video Connectsm service connection includes the appropriate video access line interface arrangement, circuit equipment and outside plant facilities. The standard video access line interface arrangement defines the technical characteristics associated with the type of facilities with which the video service will interconnect with at its Point of Termination (POT) and the type of signaling capability, if any. The VCAL includes any video encoding device that may be required to provide the service if any is required.

(b) Video Connectsm Access Port

The Video Connectsm Access Port rate applies for each Video Connectsm Access Port provided by the Utility for the use of the customer. The Video Connectsm Access Port provides the customer with point of entry to the Utility's switched video network in those instances where a Video Connectsm Access Line cannot be provided. A Video Connectsm Access Port may be located at any Video MCU. For example, a customer who has a customer designated location (CDL) outside of the LATA of service or not within a Utility serving area within the LATA of service may use a Video

B. Description - Continued

6. Service Elements - Continued

(b) Video Connectsm Access Port - Continued

Connectsm Access Port as a point of entry to the Utility's switched video network. This would allow that CDL to make video connections with other customers who have Video Connectsm Service through the Utility's switched video network in that LATA. The customer must obtain the appropriate video and/or private line transport from their CDL to the Utility's Video Connectsm Access Port and must present signals that are compatible with interface requirements of the VCALs to which they want to connect.

The Video Connectsm Access Port includes a standard video access interface arrangement defining the technical characteristic associated with the type of facilities to which the video service is connected to and the type of signaling capability, if any. The Video Connectsm Access Port does not include any video encoding devices but may include devices to control and monitor the video service.

(c) Video Connectsm Transport

The Video Connectsm Transport rate applies for video transport that may be required to provision Video Connectsm Service. The Video Connectsm Transport rate is specific to the type of Video Connect Service to which the customer subscribes.

In the case of an access line providing for point-to-point service, this rate applies for interoffice transport in those instances where the points of the point-to-point service are not served from the same SWC. In those instances where a point-to-point Video Connectsm Service has a CDL outside of the LATA or outside of the Utility's serving area, this rate applies for transport from the Utility's serving wire center (SWC) to a point of interconnection with non-Utility facilities.

VIDEO CONNECTsm SERVICE

V. GENERAL - Continued

B. Description - Continued

6. Service Elements - Continued

(c) Video Connectsm Transport - Continued

The termination and transport rates applicable for point-to-point type video service that are not found in this schedule (as in the case of Business Quality Connect) must be ordered from the appropriate Private Line tariff. A customer using Business Quality Connect point-to-point services would order Video Connectsm Access Lines from this schedule and appropriate Private Line Services for interoffice network transport and termination of their video signals.

In the case of access lines which are interconnected via the Utility's switched video network, this rate will apply to interoffice transport from the SWC to the tending MCU in those instances when there is no MCU at the customer's SWC. Similarly this rate applies for transport from a point of interconnection with non-Utility facilities to a Video Connectsm Access Port.

(d) Video Connectsm Utilization

The Video Connectsm Utilization rate applies to Type II Broadcast and Commercial Quality Access Lines and Access Ports on a per access line or per port basis for usage of the Utility's intraLATA interoffice switched video network. Video Connectsm Transport charges may apply in addition to these Utilization charges. In those instances where a video MCU is not located at the customer's SWC the Video Connectsm Transport rate will apply for the interoffice transport required to reach the Video MCU tending that SWC.

V. GENERAL - Continued

B. Description - Continued

6. Service Elements - Continued

(e) Video Connectsm Premium Services

The Video Connectsm Premium Services, Quad Split and Image Plus Still FrameTM, are optional services that are not part of a basic video interconnection between customer locations. The rate for these optional services applies to each access line for which they are ordered. Quad Split allows one customer location to view the video transmissions from up to three other locations of a multipoint connection on a single monitor over a single Video Connectsm Access Line. Image Plus Still FrameTM provides for the transmission of a still frame (such as a graphics overhead) and the motion video image over a single Video Connectsm Access Line.

(f) Special Construction

Special Construction charges will apply in those instances where the customer orders Video Connectsm Service and suitable facilities are not available. If the customer orders video services not provided for in this schedule, Special Assembly rates and charges will apply.

VIDEO CONNECTsm SERVICE

VI. REGULATIONS

A. Responsibility of the Utility

1. The Utility's responsibility will be limited to the furnishing of video connect facilities suitable for the Video Connectsm Connection. The Utility is not responsible for the installation, operation or maintenance of any equipment provided by the customer.
2. The Utility reserves the right to temporarily interrupt Video Connectsm Service to maintain the video equipment. Maintenance will be performed during hours that will minimize the impact of disruptions to the customers. In addition, negotiated unscheduled or emergency situations may necessitate additional interruption time.

B. Limitations/Availability

1. Video Connectsm Service will only be offered where Utility facilities and/or equipment permit. Special Construction charges may apply.
2. Video Connectsm Service is available only between customer locations within the same LATA. The customer may obtain appropriate private line or video services from an Interexchange Carrier to interconnect point-to-point Video Connectsm Services to video service locations not within the same LATA. Similarly, customers utilizing Type II Broadcast Quality Connect Services (Transceive) or Type II Commercial Quality Connect Services can obtain access to a locations outside of the Utility's serving area or outside of the LATA by interconnecting such locations to Video Connectsm Access Ports. Video Connectsm Transport is utilized between Ports and points of interconnection with non-Utility facilities.
3. A Video Connectsm Access Port can only be used to interconnect to a customer location that is not located in the Utility's serving area (within the LATA) or that is outside of the LATA.

VII. APPLICATION OF RATES - Continued

B. Video Connectsm Access Line

1. Broadcast Quality Connect Type I

The Type I Broadcast Quality Connect Video Connectsm Access Line is a one way facility. The customer must order a Transmit access line in order to be able to transmit video signals over the Utility's network facilities. Similarly the customer must order a Receive access line in order to be able to receive video signals over the Utility's facilities. If the customer requires both transmit and receive capability at the premises then the customer must order both a Transmit access line and a Receive access line.

2. Broadcast Quality Connect Type II

The Type II Broadcast Quality Connect Video Connectsm Access Line may be ordered as a transmit only, receive only or as bidirectional transceive facility. This type of access line may be ordered as a point-to-point service or in the case of the transceive facility it may alternatively be ordered as switched service. When Type II service is ordered as a switched service, the customer is provided with a facility capable of providing simultaneous transmission and reception of video signals to and from a switched point of termination (SPOT). The SPOT will be either another Type II Broadcast Quality Connect Video Connectsm Access Line within the same LATA or a Video Connectsm Access Port within the same LATA.

3. Commercial Quality Connect Type I

The Type I Commercial Quality Connect Video Connectsm Access Line is a one way facility. The customer must order a Transmit access line in order to be able to transmit video signals over the Utility's network facilities. Similarly, the

3. Commercial Quality Connect Type I - Continued

customer must order a Receive access line in order to be able to receive video signals over the Utility's facilities. If the customer requires both transmit and receive capability at the same premises then the customer must order both a Transmit access line and a Receive access line. The first Transmit or the first Receive access line that the customer orders for a customer designated location (CDL) will be provided at the "First System" rate. Subsequent Transmit or Receive access lines that the customer orders for the same CDL will be provided at the "Additional System" rate unless the total access lines (systems) should exceed sixteen. If the total number of access lines should exceed sixteen then seventeenth and every subsequent seventeenth access line will be rated as a "First System" with the others rated as "Additional Systems".

4. Commercial Quality Connect Type II

The Type II Commercial Quality Connect Video Connect_ Access Line is a bidirectional (transceive) facility. This type of access line may be ordered as a point-to-point service or alternatively as switched service. The customer ordering this type of access line will be provided with a facility capable of providing simultaneous transmission and reception of video signals to and from a switched point of termination (SPOT). The SPOT will be either another Type II Commercial Quality Connect Video Connectsm Access Line within the same LATA or a Video Connectsm Access Port within the same LATA.

5. Business Quality Connect Type I

The Type I Business Quality Connect Video Connectsm Access Line is a bidirectional facility. The customer ordering this type of access line will be provided with a facility capable of providing simultaneous transmission and reception of video signals to and from another such access line or similar facility over Fractional T-1 Private Line facilities.

6. Business Quality Connect Type II

The Type II Business Quality Connect Video Connectsm Access Line is a bidirectional facility. The customer ordering this type of access line will be provided with a facility capable of providing simultaneous transmission and reception of video signals to and from another such access line or similar facility over DS-1 Private Line facilities.

C. Video Connectsm Access Port

1. Broadcast Quality Connect Type II

The Type II Broadcast Quality Connect Video Connectsm Access Port is a bidirectional facility. A customer may only order this type of access to the Utility's switched video transport facilities in order to terminate transport of compatible video signals from outside of the Utility's serving area within the LATA or from outside of the LATA. This facility may not be ordered in lieu of a Video Connectsm Access Line (VCAL) under circumstances where the Utility has tariff authority to provide a VCAL.

2. Commercial Quality Connect Type II

The Type II Commercial Quality Connect Video Connectsm Access Port is a bidirectional facility. A customer may only order this type of access to the Utility's switched video transport facilities in order to terminate transport of compatible video signals from outside of the Utility's serving area within the LATA or from outside of the LATA. This facility may not be ordered in lieu of a Video Connectsm Access Line (VCAL) under circumstances where the Utility has tariff authority to provide a VCAL.

D. Video Connectsm Transport

1. Broadcast Quality Connect Type I

Type I Broadcast Quality Connect Transport provides for the transport and interoffice termination of signals originating from and/or terminating to Type I Broadcast Quality Connect VCALs. The monthly charge (MRC) for the Transport rate element is assessed on a per airline mile basis. Fractional parts of miles are rounded to the next higher mile before making the rate computation. The transport distance is limited to a maximum of 25 airline miles.

2. Broadcast Quality Connect Type II

Type II Broadcast Quality Connect Transport provides for the transport and interoffice termination of signals originating from and/or terminating to Type II Broadcast Quality Connect VCALs or Access Ports. The monthly charge (MRC) for the Transport rate element is assessed on a per airline mile basis. Fractional parts of miles are rounded to the next higher mile before making the rate computation.

3. Commercial Quality Connect Type I

Type I Commercial Quality Connect Transport provides for the transport and interoffice termination of signals originating from and/or terminating to Type I Commercial Quality Connect VCALs. The monthly charge (MRC) for the Transport rate element is assessed on a per airline mile basis. Fractional parts of miles are rounded to the next higher mile before making the rate computation. The transport distance is limited to a maximum of 25 airline miles.

5. Business Quality Connect Type I

Type I Business Quality Connect Transport provides for the transport and interoffice termination of signals originating from and terminating to Type I Business Quality Connect VCALs. Type I Business Quality Connect Transport is provided by Fractional T-1 Service which is provided from Schedule Cal. P.U.C. No. G-15.

6. Business Quality Connect Type II

Type II Business Quality Connect Transport provides for the transport and interoffice termination of signals originating from or terminating to Type II Business Quality Connect VCALs. Type II Business Quality Connect Transport is provided by DS-1 Service which is provided from Schedule Cal. P.U.C. No. G-8.

E. Video Connectsm Utilization

1. Broadcast Quality Connect Type II

Type II Broadcast Quality Connect Utilization provides for the switching and interoffice trunking of signals originating from and terminating to Type II Broadcast Quality Connect VCALs or Access Ports utilizing the Utility's switched video network. The Video Connectsm Utilization MRC is applied each month to the gigacells of network utilization that result from the customer's connect time during each monthly billing period. The accumulated usage in gigacells is rounded to the nearest one thousandth of a gigacell (kilocell) prior to the application of the rate.¹

2. Commercial Quality Connect Type II

Type II Commercial Quality Connect Utilization provides for the switching and interoffice trunking of signals originating from and terminating to Type II Commercial Quality Connect VCALs or Access Ports utilizing the Utility's switched video network. The Video Connectsm Utilization MRC is applied each month to the gigacells of network utilization that result from the customer's connect time during each monthly billing period. The accumulated usage in gigacells is rounded to the nearest one thousandth of a gigacell prior to the application of the rate.¹

Note 1: Until the Utility's network and billing system become capable of measuring and billing gigacell usage, the customer's Utilization will be assessed an assumed usage of 36.91 gigacells per month for each VCAL or Access Port.

VIDEO CONNECTsm SERVICE

VII. APPLICATION OF RATES - Continued

F. Video Connectsm Premium Services

1. Quad Split

Quad Split is an optional enhancement to Type II Commercial Quality Connect Video Connect_ Service (Transceive) when it is provided as a switched service. The Quad Split MRC is applied each month to the gigacells of network utilization that result from the customer's connect time with the Quad Split feature during each monthly billing period. The accumulated usage in gigacells is rounded to the nearest one thousandth of a gigacell (kilocell) prior to the application of the rate. This rate applies in addition to the regular VCAL or Port rate, the Utilization rate and the Transport (if required) rate.¹

2. Image Plus Still FrameTM

Image Plus Still FrameTM is an optional enhancement to standard Business Quality Connect Type I and Type II Services. The Image Plus Still FrameTM rate is applied on a per Video Connectsm Access Line (VCAL) basis. This rate applies in addition to the regular VCAL rate.

Note 1: Until the Utility's network and billing system become capable of measuring and billing gigacell usage, the customer's Utilization will be assessed an assumed usage of 36.91 gigacells per month for each VCAL or Access Port.

G. General Rate Regulations

1. Moves

When a customer requests a move or relocation of a VCAL or Access Port and/or a rearrangement of the Transport associated with the VCAL or Access Port, this move, relocation and/or rearrangement will be treated as a termination of the existing VCAL or Access Port service and the establishment of a new service for the application of all charges.

2. Cancellation or Change in Application for Service

When an application for service is cancelled or changed in whole or in part:

After the completion of installation, but prior to the establishment of service, the customer is required to pay the non-recurring and minimum charges which would apply if the service has been established.

Prior to the completion of installation, the customer may be required to pay the costs incurred by the Utility but not exceeding the amount that would be charged above.

VII. APPLICATION OF RATES - Continued

G. General Rate Regulations - Continued

3. Custom Payment Plans

At the request of a customer the Utility may, at its option, offer a Custom Payment Plan that provides a payment schedule with a net present value equal to the net present value of the Non-Recurring Charges (NRCs) and Monthly Recurring Charges (MRCs) that would otherwise be payable under the contract period selected. The net present value computations shall be made utilizing the Utility's Authorized Rate of Return. The NRC associated with a Custom Payment Plan may never be less than twenty-five percent (25%) of the non-recurring charge. Custom Payment Plan methodology may be used to provide a Custom Payment Plan with an NRC and a zero MRC. In any instance, the Custom Payment Plan provides only for service during the specified contract period and does not give the customer ownership of or equity in the facilities that the Utility provides in the provision of the service(s).

4. Expiration of Contract Period

If the customer's contract period expires and the customer has not cancelled his service or established a new contract with the Utility, the customer's service shall be continued under a month-to-month contract at the monthly rate(s) specified in the tariff for the contract term that just expired. This procedure will continue the customer's service with no change in monthly contract rates except in those instances when the expired contract was under a Custom Payment Plan.

When one contract period ends and a new one begins, the customer begins paying the MRC for the new contract period. The NRC is not accessed again unless the customer has required the Utility to change the service in some way or unless service has been discontinued between the expiration of the old contract and the initiation of the new contract.
