J. Provisional services limited by geographical and/or time constraints.

1. Data Over Voice (DOV) Service

Limitations

Geographical: Serving area of the Ellwood, Goleta, Las Positas and Santa Barbara Central Offices within the Santa Barbara exchange.

Time: To terminate as of March 1, 1991. (C)

A. Description of Service

Data Over Voice (DOV) is network service and provides for the interconnection of customer provided data devices and the transmission of data between such devices at speeds up to 19.2 Kbps. The primary component of DOV service is the data switch located in the Utility central office serving the customer. Data Over Voice service is provided from specially equipped Utility premises and uses data switching technology, digital and/or analog transmission facilities and existing local facilities to provide simultaneous switched transport of voice and data over the customer line.

B. Availability

DOV service can only be provided from central offices equipped for this service and is subject to the technical limitations of the equipment and availability of suitable facilities. The provision of features is controlled by the capability and capacity of the switching system used, therefore, all of the features may not be available in all serving switching systems.

Continued

SPECIAL SERVICE ARRANGEMENTS

RATES - Continued

J. 1. - Continued (N)

C. Customer and Customer User Responsibility

The customer is responsible for:

- Distribution of all DOV access codes to customer users and/or authorized users.

If AMUX is p]aced on-customer premises then:

- Providing the cable for connection from the data voice modem (DVM) to the asynchronous multiplexer (AMUX). The network demarcation between the AMUX on the customer's premises and the DVMs is the termination point of the AMUX frame.

- Providing the cable for connection from the customer equipment and the AMUX termination point, to the host asynchronous port. Demarcation between an AMUX on the customer's premises and a Host Asynchronous port is the cable termination blocks of the AMUX.

The customer user is responsible for:

- Providing a DVM compatible with DVM units used within GTE California network. (See SPECIAL CONDITION 1)

- Providing touch call telephones and line. The service is not available through rotary or "pulse tone" instruments

- Providing a noise filter if required. (See SPECIAL CONDITION 6)

The Utility is responsible for network configuration/central office components of:

- A Datakit™ 2000 or asynchronous multiplexer (AMUX) in the central office.

- An AMUX on the customer premises (optional).

- A digital facility connecting central office nodes.

- Data voice modems in the central office. (N)

SPECIAL SERVICE ARRANGEMENTS

SPECIAL CONDITIONS

General

1. Each special service arrangement is furnished to meet a limited or unique service requirement of a particular customer and is not to be considered as a general tariff offering.

2. Rules and regulations, rates and charges of the Utility applicable to services with which special service arrangements are interconnected also apply.

3. The Utility will designate the equipment to be used for each special service arrangement.

4. Where a termination charge is applicable to an item of equipment, the charge is the maximum charge. If an item of equipment which has a termination charge is disconnected by a customer within the specified time period after it is placed in service, a termination charge applies. The specific time period, in months, is shown in parentheses e.g. (60). The amount of the customer liability is determined by dividing the termination charge by the number of months indicated and deducting the resulting amount, multiplied by the number of months the service has been in use, from the maximum termination charge.

5. For liability and allowance for interruptions, of service see Rule No. 26.

6. The customer indemnifies the Utility against and holds the Utility harmless from any and all losses, claims, demands, causes of actions, damages, costs or liability, in law or in equity, of every kind and nature whatsoever including, without limiting the generality of the foregoing, losses, claims, demands, cause of action, damages, costs or liability for libel, slander, fraudulent or misleading advertising, invasion of the right of privacy, or infringement of copyright, or patents, et cetera, arising directly or indirectly from any act or omission of the customer or any third party in connection with, or use of, the service or facilities provided by the Utility.

7. The operating characteristics of the premise equipment shall not interfere with the services offered by the Utility or other utilities. Upon notice from the Utility that the premise equipment is causing or likely to cause hazard or interference or its use impairs privacy of conversation, the customer shall make such changes as may be necessary to remove or prevent such hazard, interference or use. In case of failure to comply with such notice, the Utility shall have the right to disconnect the arrangement which permits interconnection or to terminate service. (T) (T) (T)

5. 100 percent Sampling of CCSA Calls

a. Call detail will be provided on magnetic tape only. Call detail will Include the originating Centrex/EBSS station number or primary Centrex/EBSS service primary telephone number for calls dialed from a Centrex/EBSS service over access lines to a CCSA switcher. Under this offering, the duration of the call will be shown in minutes and seconds.

b. The nonrecurring charges include the cost of magnetic tape on a recovery and reuse basis. That is, tape when processed by the State of California for each Centrex/EBSS service, will be returned monthly to the Utility in condition suitable for reuse by the Utility in processing subsequent call detail data.

c. Call detail will be provided in the code terminology and data processing format used by the Utility. The Utility reserves the right to make changes in its code terminology and data processing format of the information on the magnetic tape upon one month's advance notice to the customer.

Continued

SPECIAL SERVICE ARRANGEMENTS

SPECIAL CONDITIONS - Continued

J. Provisional services limited by geographical and/or time constraints. (N)

1. Customer premises data voice modems (DVM) are customer provided equipment. These customer units must be compatible with Utility network bits based upon specifications utilized within GTE-California network.

2. The above rates and charges are in addition to the rates and charges for other Utility services or facilities with which this service is associated. Such services are limited to access, central office and network offerings.

3. Service order changes for port rearrangement and database change requests are subject to the appropriate Schedule Cal. P.U.C. No. A-41 charges.

4. Service additions may be made at any time in accordance with equipment availability and subject to tariff schedules effective at the time.

5. Each individual user asynchronous port ordered by the customer must be specified as payment plan A or payment plan B at the time of ordering and the payment plan may not be changed while the port is assigned to the same user.

6. Some customer user premises wiring arrangements may necessitate use of a filter for noise mitigation. Provision of this filter is the responsibility of the customer user.

7. The Utility limitations of liability are set forth in Schedule Cal. P.U.C. No. D&R, Rule No. 25.

   Provisions for the connection of customer provided equipment to Utility facilities are set forth in Schedule Cal. P.U.C. No. D&R, Rule No. 41.

8. Starkeeper optional billing is primarily for customers with multiple asynchronous port users. This software option for DOV service provides bill inn information regarding an individual port's session(s).

   The customer may enable this feature at the same time each user asynchronous port is configured in the data base.

(N)

Continued

SPECIAL SERVICE ARRANGEMENTS

SPECIAL CONDITIONS - Continued

J. 8. - Continued (N)

The customer can obtain billing information to bill its users via a 1200 baud dial up port to the Starkeeper Administration Processor. The customer may also use access to the Starkeeper to change internal user groups and passwords.

The billing feature displays: the number of packets switched, destination, circuit connection time, and circuit termination time. When the session has ended, all the information regarding the calling and called parties, length of session and the time the call was initiated will be sent to a billing process. This process sends the information to a host computer or a receive only printer.

Billing information can be sent to a customer's computer for bill-backs to another organization, or for statistics on calling activity. (N)
