FACILITIES BASED INTRASTATE ACCESS SERVICES (N)

I. GENERAL - Continued

A. Applicability

This tariff schedule is applicable to areas in which Verizon will provide Facilities Based Intrastate Access Services to customers as noted in D. 95-07-054 and D. 02-02-11. These areas are defined in the MAPS section (I.C.) of this tariff.

B. Definitions

Facilities-Based Service Provider - A provider of telecommunications services, within defined service areas, which directly owns, controls, operates, or manages conduits, ducts, poles, wires, cables, instruments, switches, appurtenances, or appliances in connection with or to provide local exchange communications within its defined service areas and between service areas of other local exchange providers within California. A facilities-based service provider may own, control, operate, or manage conduits, ducts, poles, wires, cables, instruments, switches, appurtenances or appliances.

Non Facilities-Based Resale Service Provider - A provider of telecommunications services within defined service areas that does not directly own, control, operate, or manage conduits, ducts, poles, wires, cables, instruments, switches, appurtenances, or appliances in connection with or to provide local exchange communications within its defined service areas and between service areas of other local exchange providers within California.

Mileage Calculation - Mileage between Utilities' Points of Presence (POPs) where services are offered is calculated based on V&H coordinates reflected in NECA Tariff FCC No.4.

The calculation of airline mileage between Utility network terminal offices is performed as follows:

(1) Obtain the V&H coordinates for each POP.

(2) Obtain the difference between the V coordinates and between the H coordinates for each POP.

(3) Square each difference from (2) above.

(4) Add the square of the V difference to the square of the H difference from (3) above.

(5) Divide the sum of the squared numbers by 10. Round to the next higher whole number.

(6) Obtain the square root of the number obtained in (5) above. Round to the next higher whole number. This is the airline mileage figure.

(7) If calculating quarter (1/4) miles, obtain the square root of the result obtained in (6) above. This is the rate distance in miles. Fractional miles are rounded to the next higher mile. The rate for each quarter mile is 25% of the rate per mile, rounded to the nearest cent. (N)

I. GENERAL - Continued

B. Definitions - Continued

Network Downtime - Network downtime is defined as the number of minutes from a customer-reported outage, not determined to be the fault of the customer, until the customer accepts a cleared outage report. Network downtime is calculated in minutes, and subtracted from total monthly minutes. Total monthly minutes are determined by multiplying the number of days in a month by 1,440. The percentage figure obtained by dividing the number of minutes of total network availability by the total monthly minutes is used to determine monthly network availability.

Central Office Node (CO Node) - A central office that is equipped with a fiber optic terminal in which the customer requests the ability to add/drop traffic to a customer designated location (CDL). (N)

III. TERMS AND CONDITIONS

A. Availability of Services

Facilities Based Intrastate Access Services are available where technically feasible.

B. Service Credit

Customers will receive a credit for network downtime (as specified in I.B) greater than 30 minutes.

C. Other Terms and Conditions

See Terms and Conditions, Schedule Cal. P.U.C. No. K-2.

D. Special Conditions

Optical Networking (SONET) Facilities

General

This section contains the rules and regulations pertaining to the provisioning of SONET Service. The regulations and rates specified herein are in addition to the applicable rates and regulations specified in other sections of this tariff.

This service supports asynchronous bandwidth capacities at 1.5 Mbps and 45 Mbps in addition to synchronous Optical Carrier (OC) bandwidth capacities at OC-3 and OC-12 Mbps. The SONET add/drop multiplexer aggregates lesser bit speed services onto the dedicated SONET ring or the two-point SONET circuit configuration.

The customer is responsible for providing all facilities and cabling necessary to connect customer equipment to this interface.

Customer Facility Assignment (CFA) is controlled by the Utility, in all access customer serving wire centers on the Interoffice Facility (IOF) and extends to the terminating CDL. Should the customer require control of the facility assignment and order multiplexing on the IOF, the services from the multiplexer to the end user serving wire center will be ordered from IV.B of this tariff.

It is the customer's responsibility to ensure that the customer's equipment provides industry standard electrical signals compatible with Optical Networking transport transmission. Technical specifications are contained in the following publications:

Bellcore Document GR-253-CORE, Issue 2, April, 1996
Bellcore Document GR-1400-CORE, Issue 1, March, 1994
Bellcore Document GT-1374-CORE, Issue 1, March, 1994

Optical Networking (SONET) Facilities - Continued

General - Continued

The Utility will work cooperatively with the customer during a planning session to insure that the customer orders sufficient Optical Networking bandwidth capacity to satisfy the customer's requirements as well as other applicable Optical Networking services. This planning session must take place prior to the customer's placement of an initial Optical Networking service order.

Availability of Service

Service is available where technically feasible and is limited to within 1/2-mile of existing facilities and the 1/2-mile limit may not be in addition to any other 1/2-mile addition to existing facilities.

Description

Optical Networking is comprised of high speed SONET based technology providing connectivity at, and transport between, two or more CDLs. (N)

Service Elements

1. Connect

The Connect service element provides the platform for customer access to the Utility's Optical Network which provides the link between the CDL and the service wire center of the CDL.

There are two types of Connect:

a. Custom Connect

Custom Connect provides a connection between the Utility's Optical Network and an access customer's CDL. Custom Connect is comprised of four service elements: Central Office (CO) Nodes, CDL Links, Transport and Riders. Each Custom Connect must consist of a minimum of two CDLs, one of which must be a CDL Link.

Central Office (CO) Node

A CO Node is defined as each central office equipped with a fiber optic terminal in which the customer requests the ability to add/drop traffic to a CDL. If the customer wants to drop traffic below a DS3 at the CO Node, the customer must request a minimum DS1 interface and appropriate special access lines from IV.B. The appropriate multiplexing and access lines and transport rates from IV.B will apply in addition to the CO Node and appropriate rider charges. The CO Node may be ordered at an OC3 or OC12 bandwidth capacity. The CO Node may be ordered for a one (1) year, three (3) year, five (5) year, or seven (7) year term period.

A CO Node may be ordered when a customer requires OC level multiplexing on the Custom Connect service element.

CO Nodes may only be ordered from wire centers with Optical Networking capabilities. (N)

Service Elements - Continued

1. Connect - Continued

a. Custom Connect - Continued

CDL Link

The CDL Link service element is defined as a route to each CDL to which the customer requests the ability to add/drop traffic. The CDL Link is offered as a Single Route, Diverse Route, or Ring Route and may be ordered with or without Utility provided electronics as OC3 or OC12 bandwidth capacity. Only one CDL Link per Custom Connect may be ordered without electronics.

If more than two CDL Links or CO Nodes are ordered on the same order, the CDL Link may be ordered as a Ring Route CDL Link. A Custom Connect ordered via a ring topology will be provided with an out-of-service credit as specified in III.D.

The CDL Link may be ordered as OC3c [1] or OC12c Single Route or Diverse Route with Utility provided electronics. OC3c and OC12c rider charges are included in the monthly rate for OC3c and OC12c CDL Links.

The CDL Link may be ordered under a one (1) year, three (3) year, five (5) year, or seven (7) year term period. (N)

[1] "c" is defined as Concatenated and denotes the linking together of various data structures; e.g., two bandwidths joined to form a single bandwidth. (N)

CDL Link with Optical Cross Connect

The CDL Link with Optical Cross Connect provides the communications path between the Utility's serving wire center end of a CDL Link and an IXC's or ISP's transmission equipment and facilities collocated in the Utility's serving wire center. This service element includes the CDL Link from the fiber optic terminal and the optical jumpers that facilitate the cross connect to the IXC's or ISP's transmission equipment and facilities, located within the Utility wire center.

The CDL Link with Optical Cross Connect will be provided as a single route without Utility provided electronics as OC3, OC3c, OC12 or OC12c as ordered by the customer.

In addition to the rate for the CDL Link with Optical Cross Connect, the appropriate CDL Link rate is applicable from the CDL to the serving wire center, and the appropriate Dedicated Transport rate is applicable between serving wire centers.

The CDL Link with Optical Cross Connect may be ordered as a one (1) year, three (3) year, five (5) year, or seven (7) year term period.

Rates for the CDL Link with Optical Cross Connect are shown in IV.C will apply in addition to other charges specified in this section. (N)

Transport

Transport may be ordered as shared or dedicated transport. Shared Transport is transport between CO Nodes or between CO Nodes and Links ordered at different bandwidth levels. Dedicated Transport is transport between CO Nodes or between CO Nodes and Links of the same bandwidth level. Shared Transport may be ordered in bandwidths of DS1, DS3/STS1, OC3, OC3c, OC12 or OC12c. Dedicated Transport may be ordered in bandwidths of OC3, OC3c, OC12 or OC12c.

Transport is mileage sensitive and will be calculated based on the V&H coordinates of the wire centers comprising each segment of the connection. The mileage calculation is specified in I.B.

Transport is provided at a monthly recurring charge, per airline mile (see IV.B).

Rider

A Rider provides specified bandwidth level for the customer's service(s) traversing the CDL Link. Riders may be provided at DS1, DS3, OC3c, OC12c, or STS1 bandwidth levels as required by the customer.

A Rider is provided at a flat-rated monthly recurring charge which includes add/drop multiplexing and is applicable per rider circuit with the exception of OC3c and OC12c CDL Links. (N)

1. Connect - Continued

b. Express Connect

Express Connect service provides a connection to the Utility's Optical Networking wire center(s) via a ring topology consisting of three nodes, one of which must be a Utility wire center. When two of the nodes are CDLs, at least one of the CO Nodes must be electrical. Express Connect is provided at a bandwidth of OC3 or OC12 and may be ordered for a one (1) year, three (3) year, five (5) year, or seven (7) year term period.

Express Connect is comprised of five service elements: a First System, Additional System(s), Additional CDL Nodes, Additional CO Nodes and Transport.

First System

The customer may order the "First System" of OC3 or OC12 bandwidth.

Additional System

The customer may order up to three "Additional Systems" of OC3 or OC12 bandwidth, not to exceed OC12 or OC48 bandwidth capacity respectively.

Additional CDL Node

The Additional CDL Node service element is each CDL to which the customer requests the ability to add/drop traffic. The Additional CDL Node may be ordered at an OC3 or OC12 bandwidth capacity. (N)

Additional CO Node

The Additional CO Node service element is each central office equipped with a fiber optic terminal in which the customer requests the ability to add/drop traffic to a CDL. If the customer wants to drop traffic below a DS3 at the CO Node, the customer must request a minimum DS1 interface and appropriate special access lines from IV.A. The appropriate multiplexing and access lines and transport rates from IV.A and IV.B will apply in addition to the Additional CO Node charge. The Additional CO Node may be ordered at an OC3 or OC12 bandwidth capacity.

Transport

Transport may be ordered as shared or dedicated. Shared Transport is transport between CO Nodes or between CO Nodes and Links ordered at different bandwidth levels. Dedicated Transport is transport between CO Nodes or between CO Nodes and Links of the same bandwidth level. Shared Transport may be ordered in bandwidths if DS1, DS3/STS1, OC3, OC3c, OC12 or OC12c. Dedicated Transport may be ordered in bandwidths of OC3, OC3c, OC12 or OC12c.

Transport is mileage sensitive and will be calculated based on the V&H coordinates of the wire centers comprising each segment of the connection. The mileage calculation is specified in I.B.

Transport is provided at a monthly recurring charge, per airline mile (see IV.B).

The Transport service element applies when Express Connect has more than one CO Node in the ring. The appropriate Custom Connect Shared Transport rates from IV.C will apply in addition to all other Express Connect rates. (N)

Rate Regulations

1. General

Optical Networking may be ordered under a one (1), three (3), five (5), or seven (7) year term period. Any term commitment for these services is subject to the Termination Liability Charge as specified in III.D.2.

When ordered together, the term commitment applies to Connects and Additional Nodes.

2. Termination Liability

See Schedule Cal. P.U.C. No. D&R, Rule No. 47, for termination liability rules.

Off-Net Wire Center

Off-Net wire center is a wire center not designated as an Optical Networking wire center office. The customer may order a DS1 or DS3 to the Off-Net wire center. Associated transport mileage charges will be determined based on airline miles to the nearest On-Net wire center at the transport rates shown in Section IV.A and IV.B.

Circuits connected to the Off-Net wire center will be billed at existing tariff rates (see Section IV.A and IV.B). (N)
