| 2.1.1 Availability |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A.                 | Extending of an intraexchange channels between the following locations is no longer available. Service arrangements for additional terminations within a building or to another building on the same premises installed before December 31, 1986 are furnished to existing customers at present locations only in the same or lesser quantities. Effective February 13, 2026, this service is no longer available to new customers. Moves, changes or modifications to this service will no longer be supported. Service modifications for customers with existing contracts are subject to the terms of their contracts. (C) |
|                    | 1. Between points in different buildings not on the same premises                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|                    | 2. Between points within a building involving the same or different premises                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|                    | 3. Between points in different buildings on the same premises, or                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|                    | 4. Extending additional points in the same building of channels described herein.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| B.                 | 5. Please refer to Part J, Section 1, for wire center specific withdrawal information-of Private Line Series 1000 Channels. (C)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| B.                 | Two point intraexchange channels furnished in lines in excess of ten between the same two points based on a direct airline measurement between the points of termination between different buildings not on the same premises or between a customer's premises and the rate center or Verizon central office for Types 1001, 1002, 1005 and 1006 being furnished on a mileage basis on or before March 21, 1983 may be continued for existing customers at present locations in the same or fewer quantities. New installations will be provided only at rates and charges specified in Part M.                               |
| C.                 | Type 1006 channels installed to extend a channel to an additional point in the same building, or to another building on the same premises installed on or before March 21, 1983 with additional termination within a building or to another building on the same premises may be continued for existing customers at present locations in the same or fewer quantities.                                                                                                                                                                                                                                                       |
| D.                 | Extending of interexchange local channels (Types 1002, 1005 and 1006) is no longer available. Service arrangements for additional terminations within a building or to another building on the same premises installed before December 31, 1986 are furnished to existing customers at present locations only in the same or lesser quantities.                                                                                                                                                                                                                                                                               |
| 2.1.2 Description  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| A.                 | Series 1000 channels are furnished for half duplex operation on a two-point or multi-point basis and for duplex operation on a two point basis or any two point portion of a multi-point channel.                                                                                                                                                                                                                                                                                                                                                                                                                             |

## 2. Private Line Services

### 2.1 Series 1000 Channels

| 2.1.2 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| B.    | <p><b>Special Signaling</b>— Two-wire metallic or other effectively equivalent unconditioned channels are furnished for use with Verizon provided service arrangements or with customer provided signaling equipment in accordance with Verizon technical reference specifications. These channels are furnished for remote metering, supervisory control or miscellaneous signaling arrangements. Metallic interoffice facilities and metallic interexchange facilities for these services are in continually decreasing supply and are furnished subject to availability. Construction of facilities expressly for these services is not contemplated.</p> |
| 1.    | <p><b>Type 1001</b>— point or three-point service for direct current transmission (DC metallic continuity) on an intraexchange basis only. No additional terminations are provided within a building or to another building on the same premises. [No longer available. Service arrangements for additional terminations within a building or to another building on the same premises installed before December 31, 1986 are furnished to existing customers at present locations only in the same or lesser quantities.]</p>                                                                                                                               |
| 2.    | <p><b>Type 1002</b>— These channels are furnished on an intraexchange or interexchange basis. They are furnished to accommodate a minimum of four intraexchange points or two interexchange points up to a maximum of 26 points and to include not more than three central office buildings for low speed and unidirectional signaling. [Service arrangements installed on or before March 21, 1983, with points in excess of those specified above are furnished to existing customers at present locations only in the same or lesser quantities.]</p>                                                                                                     |
| a.    | <p>No additional terminations are provided within a building or to another building on the same premises. These channels are furnished as metallic facilities or other equivalent means at Verizon's option. When metallic facilities are not available, Verizon will provide this service via a low speed signaling system. [No longer available. Service arrangements for additional terminations within a building or to another building on the same premises installed before December 31, 1986 are furnished to existing customers at present locations only in the same or lesser quantities.]</p>                                                    |
| C.    | <p><b>Sub Voice</b>— Two-point or multi-point channels suitable for transmission up to 75 bauds or 150 bauds are furnished for use with terminal equipment as specified below. These channels are provided for use with data and teletypewriter equipment.</p>                                                                                                                                                                                                                                                                                                                                                                                               |
| 1.    | <p><b>Type 1005</b>— Up to 75 baud operation. No additional terminations are provided within a building or to another building on the same premises. [No longer available. Service arrangement for additional terminations within a building or to another building on the same premises installed before December 31, 1986 are furnished to existing customers at present locations only in the same or lesser quantities.]</p>                                                                                                                                                                                                                             |
| 2.    | <p><b>Type 1006</b>— Up to 150 baud operation. No additional terminations are provided within a building or to another building on the same premises. [Service arrangements installed on or before March 21, 1983, with additional terminations in excess of those specified above may be continued for existing customers at present locations.]</p>                                                                                                                                                                                                                                                                                                        |

## 2. Private Line Services

### 2.1 Series 1000 Channels

| 2.1.3 Terms and Conditions |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                  | Series 1000 channels, when furnished for remote metering, supervisory control or miscellaneous signaling purposes, may be used for such purposes as indicating readings of meters at distant locations, operating switches which in turn perform some desired operation, or operating special signaling devices of the customer. Station equipment and station wiring for remote metering, supervisory control or miscellaneous signaling purposes, other than the equipment necessary for the suitable termination of the channel on the customer's premises shall be provided by the customer. |
| <b>1.</b>                  | Type 1005 channels when used for teletypewriter or Morse services may be connected to extend service to another customer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>2.</b>                  | Type 1006 channels when used for teletypewriter or Morse services may be connected to extend service to another customer. Stations connected to Type 1006 channels which are arranged for 150 baud operation require a station arrangement. A station arrangement is required to arrange each station for 150 baud operation. When an extension station is located within range limitations, no additional station arrangement is required.                                                                                                                                                      |
| <b>3.</b>                  | For those channels between points in different buildings not on the same premises additional points on the same circuit for Type 1001 are furnished subject to the terms and conditions specified in Section 2.1.2. Additional points on the same circuit for Type 1002 are furnished subject to the terms and conditions specified in Section 2.1.2B2.                                                                                                                                                                                                                                          |
| <b>B.</b>                  | For interexchange channels, additional local channels (Type 1002) in the same exchange on the same circuit are furnished subject to terms and conditions specified in Section 2.1.2B2.                                                                                                                                                                                                                                                                                                                                                                                                           |

| 2.1.4 Application of Rates and Charges |                                                                                                                                  |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                              | <b>Service Charges</b> apply as appropriate and are in addition to the applicable nonrecurring charges for Series 1000 channels. |
| <b>B.</b>                              | <b>Moves—</b> Service charges apply as appropriate.                                                                              |
| <b>C.</b>                              | <b>Switching Arrangements—</b> Charges will be based on cost.                                                                    |

| A.                | Series 2000 channels are furnished for half duplex operation on a two point or multipoint basis. The various types of services furnished are as follows.                                                                                                                                                                                                                                                                                     |
| 1.                | <b>Type 2001</b> channels are furnished for voice transmission for terminal equipment not involving connection of a PBX or other arrangement to a local or toll central office line to form a through connection over the private and exchange service lines.                                                                                                                                                                                |
| 2.                | <b>Type 2001A</b> channels are furnished for voice transmission as bridged connections to exchange service lines or as PBX (or similar) off-premises main and extension station lines, which may require signaling arrangements for operation over channels with specified resistance, with the capability of connection at a PBX, (or similar) system to a local or toll central office line to form a through connection over such a line. |
| 3.                | <b>Type 2001B</b> channels are furnished for voice transmission provided with or without signaling arrangement(s) to interconnect PBX (or similar) systems, Centrex systems or PBX (or similar) and Centrex systems.                                                                                                                                                                                                                         |
| 4.                | <b>Type 2002</b> channels are furnished for remote control and operation of mobile radio-telephone systems.                                                                                                                                                                                                                                                                                                                                  |
| 5.                | <b>Type 2006</b> channels are furnished for voice transmission in connection with foreign exchange service.                                                                                                                                                                                                                                                                                                                                  |
| 6.                | <b>Type 2006A</b> channels are furnished for voice transmission in connection with foreign central office service.                                                                                                                                                                                                                                                                                                                           |

| 2.2.3 Terms and Conditions—Type 2001 |                                                                                                                                                   |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| A.                                   | These channels may be used for conference service so that persons at three or more telephones may converse simultaneously.                        |
| B.                                   | These channels may be used for data transmission subject to the provisions herein and in Section 1.                                               |
| C.                                   | These channels may be connected to extend service to another customer when the connection is made in accordance with the provisions of Section 1. |

### 2.2 Series 2000 Channels

| 2.2.3 Terms and Conditions—Type 2001 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>D.</b>                            | These channels may be used to provide school to home service. School to home service equipment is provided by the customer and must include combined amplifier-speaker-microphone equipment for use in a classroom and a home, or hospital. This equipment, at either location, may be fixed or portable.                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>E.</b>                            | These channels may be furnished between premises of the customer for the purpose of connecting terminal equipment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>F.</b>                            | Telephotograph equipment for the transmission and reception of pictures and similar material may be used in connection with a private line for voice communications under the conditions that private line telephone service is not represented as adapted to the telephotographic transmission of pictures and similar material.                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>1.</b>                            | <b>Liability—</b> The use of private line service for telephotographic transmission is permitted only on the condition that Verizon is not responsible for damages arising out of mistakes, omissions, interruptions, delays, or errors or defects in transmission, except those caused by its failure to furnish facilities suitable for ordinary telephone service or its failure to maintain and operate the facilities in a manner proper for telephone service. The liability of Verizon for damages caused by its failure to furnish facilities suitable for ordinary telephone service or its failure to maintain and operate the facilities in a manner proper for telephone service is as set forth in Section 1. |
| <b>G.</b>                            | <b>Service Interruptions—</b> Credit will be allowed only as provided in Section 1.6.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| 2.2.4 Terms and Conditions—Type 2001 Extension Service Associated with Government Service |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                                                                                 | <b>Interexchange Channels—</b> When stations of an extension service are in exchanges in which there is no station on the Government service, interexchange mileage charges apply for the interexchange channel connecting such exchanges with the nearest exchange in which there is a station on the Government service.                                                                                                                                                                     |
| <b>B.</b>                                                                                 | <b>Local Channels—</b> Intraexchange channel rates and charges for two local channels to the customer's building apply for each station connected to a central office on a service arranged for communication among three or more stations at one time, except that where stations of an extension service are located on the same premises as a station on the Government service, charges for connecting arrangements specified herein will apply in lieu of the charges for local channels. |
| <b>C.</b>                                                                                 | <b>Connecting Arrangements—</b> When one or more extension services are located on the same premises but in a different building than a station on the Government service, rates and charges are applicable for each extension service.                                                                                                                                                                                                                                                        |
| <b>D.</b>                                                                                 | Move and change charges apply as appropriate.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## 2. Private Line Services

### 2.2 Series 2000 Channels

| 2.2.5 Terms and Conditions—Type 2001A |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                             | These channels are classified as extension lines and are furnished in connection with main telephone exchange service and PBX (or similar) and Centrex systems, or between premises of the customer for the purpose of connecting PBX (or similar) or Centrex systems to other terminal equipment. Extension lines are furnished when the following situations occur.                                                                                                                        |
| 1.                                    | The extension station line or PBX (or similar) main or extension station line is at a different premises in which the associated main station line or PBX (or similar) system is located.                                                                                                                                                                                                                                                                                                    |
| 2.                                    | A Centrex station line is located in a building other than the principal premises.                                                                                                                                                                                                                                                                                                                                                                                                           |
| 3.                                    | The terminal equipment is outside the building in which the associated PBX (or similar) system is located.                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>B.</b>                             | Extension lines are designed to meet normal transmission and signaling requirements and will be furnished when practicable and where facility conditions permit.                                                                                                                                                                                                                                                                                                                             |
| <b>C.</b>                             | <b>Extension Line Signaling Arrangements—</b> Extension lines furnished for PBX (or similar) off-premises main or extension station lines require signaling arrangement(s) as follows.                                                                                                                                                                                                                                                                                                       |
| 1.                                    | <b>Type A—</b> Furnished for use with Class A PBX (or similar) station ports capable of operation over channels with resistance in the range of 0–199 ohms                                                                                                                                                                                                                                                                                                                                   |
| 2.                                    | <b>Type B—</b> Furnished for use with Class B PBX (or similar) station ports capable of operation over channels with resistance in the range of 200–899 ohms                                                                                                                                                                                                                                                                                                                                 |
| 3.                                    | <b>Type C—</b> Furnished for use with Class C PBX (or similar) station ports capable of operation over channels with resistance in the range of 900 ohms or more.                                                                                                                                                                                                                                                                                                                            |
| <b>D.</b>                             | When an interexchange business extension line originates and terminates in Metropolitan Boston exchanges, the associated main service must be on a measured basis. In all other cases, interexchange extension lines may be associated with measured or unlimited service in accordance with the offering in the exchange and subject to the general terms and conditions governing the furnishing of measured and unlimited service on the same premises as specified in Part A, Section 5. |
| <b>E.</b>                             | Extension lines provided in connection with Centrex service are furnished subject to the terms and conditions specified in Part H.                                                                                                                                                                                                                                                                                                                                                           |
| <b>F.</b>                             | These channels may be used for data transmission subject to the provisions herein and in Section 1.                                                                                                                                                                                                                                                                                                                                                                                          |

| 2.2.6 Terms and Conditions—Type 2001B |                                                                                                                                    |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                             | These channels are classified as tie lines and furnished to interconnect the following systems or premises.                        |
| 1.                                    | PBX or similar systems of the same or different customers in different buildings and premises not on the same continuous property, |

Effective: January 1, 2015

Verizon New England Inc.

## 2. Private Line Services

### 2.2 Series 2000 Channels

| <b>2.2.6 Terms and Conditions–Type 2001B</b> |                                                                                                                                                                                                                                                                                                                                                |
|----------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                                    | (Continued)                                                                                                                                                                                                                                                                                                                                    |
| <b>2.</b>                                    | The principal premises of a Centrex system and its satellite service location,                                                                                                                                                                                                                                                                 |
| <b>3.</b>                                    | The principal premises of separate Centrex systems of the same or different customers, and                                                                                                                                                                                                                                                     |
| <b>4.</b>                                    | The principal premises of a Centrex system and a PBX system of the same or different customers.                                                                                                                                                                                                                                                |
| <b>B.</b>                                    | Tie lines are designed to meet normal transmission and signaling requirements and will be furnished where practicable and where facility conditions permit. Tie line connections to central office trunk lines may be established at either end but not both ends simultaneously.                                                              |
| <b>C.</b>                                    | Dial-type tie lines require E&M signaling arrangement(s) to provide an E&M signaling interface with switching equipment located on the customer's premises when furnished for use between two PBX (or similar) systems, and, between a PBX (or similar) system and a Centrex system, in which case only one signaling arrangement is required. |
| <b>D.</b>                                    | Interexchange tie lines may be associated with measured or unlimited PBX (or similar) systems or Centrex in accordance with the offering in the exchange and are subject to the terms and conditions contained in Part A, Section 5 governing the furnishing of measured and unlimited service on the same premises.                           |
| <b>E.</b>                                    | Tie lines provided in connection with Centrex service are furnished subject to the terms and conditions specified in Part H.                                                                                                                                                                                                                   |
| <b>F.</b>                                    | These channels may be used for data transmission subject to the provisions herein and in Section 1.                                                                                                                                                                                                                                            |

| <b>2.2.7 Terms and Conditions–Type 2002</b> |                                                                                                                                                                                                                                                                      |
|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                                   | These channels are furnished between specified locations for the remote operation and control of private land radio-telephone stations established for communication with mobile units. Channels are suitably terminated on the premises of the customer by Verizon. |

| <b>2.2.8 Terms and Conditions–Type 2006</b> |                                                                                                                                                                                                  |
|---------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                                   | These channels are furnished to permit customers to obtain individual line or trunk line connection from an exchange other than that normally serving the area in which the customer is located. |
| <b>B.</b>                                   | The terms and conditions applicable to these arrangements are as shown for foreign exchange service in Part A.                                                                                   |

- |           |                                                                                                                                                                                                       |
|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b> | Rates and charges specified elsewhere in this Product Guide for main telephone exchange service are applicable with channel Types 2001A, 2006 and 2006A.                                              |
| <b>B.</b> | In addition to the nonrecurring charges for Series 2000 service, service charges apply as appropriate.                                                                                                |
| <b>C.</b> | For Type 2006 interexchange channels, the mileage rate between rate centers is limited to three exchanges.                                                                                            |
| <b>D.</b> | The rates for Series 2000 channels contemplate service involving connection between telephones connected to the line and arranged for hand generator signaling. Signaling arrangements are available. |

Verizon New England Inc.

## 2. Private Line Services

### 2.3 Series 3000 Channels

| 2.3.1 Availability |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A.                 | Intraexchange channels furnished between points within a building involving the same or different premises, or, between points in different buildings on the same premises are no longer available. Service arrangements for additional terminations within a building or to another building on the same premises installed before December 31, 1986 are furnished to existing customers at present locations only in the same or lesser quantities. Effective February 13, 2026, this service is no longer available to new customers. Moves, changes or modifications to this service will no longer be supported. Service modifications for customers with existing contracts are subject to the terms of their contracts. (C) |
| B.                 | Extension of a Type 3001 and 3002 intraexchange and/or interexchange local channel or additional local channel in the same exchange on the same circuit is no longer available. Service arrangements for additional terminations within a building or to another building on the same premises installed before December 31, 1986 are furnished to existing customers at present locations only in the same or lesser quantities. (C)                                                                                                                                                                                                                                                                                              |
| C.                 | Two point intraexchange channels furnished in lines in excess of ten between the same two points based on a direct airline measurement between the points of termination between different buildings not on the same premises for Types 3001 and 3002, or between a customer's premises and the rate center or Verizon central office for Types 3001 and 3002, being furnished on a mileage basis or on or before March 21, 1983 may be continued for existing customers at present locations in the same or fewer quantities. New installations will be provided only at current Product Guide rates and charges.                                                                                                                 |
| D.                 | Please refer to Part J, Section 1, for wire center specific withdrawal information of Private Line Series 3000 Channels. (C)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 2.3.2 Description  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| A.                 | Series 3000 channels are designed to meet certain specifications based on Verizon standards of measurement for data transmission and for remote metering, supervisory control, and miscellaneous signaling purposes as set forth herein. These channels are not suitable for the transmission of direct current pulses. The number of stations that may be connected and the distance over which transmission is possible may be limited by operating and transmission factors on channels furnished for data transmission.                                                                                                                                                                                                        |
| B.                 | The channels may also be furnished to connect terminal equipment or communications systems to other terminal equipment or communications systems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| C.                 | Channels are furnished for half duplex operation on a two point or multi-point basis and for duplex operation on a two point basis or any two point portion of a multi-point channel. The transmission characteristics and the various types of services furnished within this series are as follows.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 1.                 | <b>Type 3001—</b> Approximate bandwidth of 300 to 3,000 Hz. Furnished for remote metering, supervisory control and miscellaneous signaling purposes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

Effective: February 13, 2026

### 2.3 Series 3000 Channels

| 2.3.2 Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| C. (Continued)    |                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 2.                | <b>Type 3002</b> — Approximate bandwidth of 300 to 3,000 Hz. Furnished either as an unconditioned or conditioned channel for data transmission. A channel conditioning arrangement is required when the channels are used for either C1, C2 or D1 data transmission. When the channel equipped with Type D1 conditioning is utilized for voice communications, Verizon does not guarantee that the channel will be suitable for voice transmission. |

| 2.3.3 Terms and Conditions—Type 3001 |                                                                                                                                                                                                               |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A.                                   | These channels are furnished for indicating readings of meters at distant locations, operating switches which in turn perform some desired operation, or operating special signaling devices of the customer. |

| 2.3.4 Terms and Conditions—Type 3002 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A.                                   | These channels when used for data transmission require terminal equipment (data sets) to condition signals generated by apparatus furnished by the customer to signals suitable for transmission on the channel and to condition signals received from the channel to signals for delivery to apparatus furnished by the customer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| B.                                   | These channels may be used for normal black and white telephotograph (facsimile) transmission purposes without the use of terminal equipment. When picture transmission refinements are required, suitable terminal equipment should be used.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| C.                                   | <b>Conditioning</b> — When Type 3002 channels are used for C1, C2 or D1 data transmissions, the following conditioning arrangements are required. <ol style="list-style-type: none"> <li><b>C1</b>— The envelope delay distortion must not exceed between 1,000 or 2,400 Hz, a maximum difference of 1,000 microseconds. The loss deviation with frequency (from 1,000 Hz reference) must not exceed between 1,000 and 2,400 Hz, -1db to +3db, or between 300 and 2,700 Hz, -2db to +6db.</li> <li><b>C2</b>— The envelope distortion must not exceed between 1,000 or 2,600 Hz, a maximum difference of 500 microseconds, between 600 or 2,600 Hz, a maximum difference of 1,500 microseconds, or between 500 or 2,800 Hz, a maximum difference of 3,000 microseconds. The loss deviation with frequency (from 1,000 Hz reference) must not exceed between 500 and 2,800 Hz, -1db to +3db, or between 300 and 3,000 Hz, -2db to +6db.</li> <li><b>D1 (High Performance Data Conditioning)</b>— For a two point channel Signal to C-Notched noise ratio is 28db. Nonlinear distortion is signal to second order distortion of 35db or, signal to third order distortion of 40db. Type D1 is furnished subject to the availability of suitable facilities.</li> </ol> |

| A.                  | Series 5000 channels are available to existing customers at their present locations only. Effective February 13, 2026, this service is no longer available to new customers. Moves, changes or modifications to this service will no longer be supported. Service modifications for customers with existing contracts are subject to the terms of their contracts. Please refer to Part J, Section 1, for wire center specific withdrawal information of Private Line Series 5000 Channels.                                                                               |
|                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2.4.2 Description   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| A.                  | Series 5000 channels are furnished between specified locations for voice, telephotograph (facsimile), teletypewriter, data transmission, remote metering, supervisory control, miscellaneous signaling and other purposes for which terminating arrangements are provided.                                                                                                                                                                                                                                                                                                |
| B.                  | Series 5000 channels are furnished for half duplex or duplex operation, on a two point or multi-point basis.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2.4.3 Base Capacity |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| A.                  | Series 5000 channels provide base capacity for transmitting various forms of electrical communication up to the limits specified for the various types as set forth herein and terminating arrangements necessary for the utilization of such capacity.                                                                                                                                                                                                                                                                                                                   |
| B.                  | Within the limits of a base capacity, for purposes of consolidation, the customer may move as many individual channels of lesser capacity arranged for use as required. As of April 14, 1994 the total number of channels in-service may not increase, and any channel removed from service may not be replaced. A channel is considered arranged for use when the necessary terminating or connecting arrangements are furnished pursuant to the customer's order.                                                                                                       |
| C.                  | Base capacity denotes the potential for communication channels and services which can be realized only with the use of terminating arrangements. Base capacity, with appropriate terminating arrangements, is provided for use as a wideband channel or for use as individual channels of lesser capacity which in total do not exceed the equivalent voice grade capacity specified for each type. Base capacity is furnished in a manner elected by Verizon, whether by wire, radio or a combination thereof and whether or not by means of a single facility or route. |

| <b>2.4.3 Base Capacity</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>D.</b>                  | For each base capacity Verizon undertakes to provide only that portion of the maximum base capacity which the customer orders as channels arranged for his use. For purposes of consolidation, channels up to the maximum of the base capacity may be moved and arranged for use at the customer's request subject to the availability of suitable terminating or connecting arrangements. The various types and classification of base capacity furnished within Series 5000 channels is as shown in Exhibit 2.4.3-1. |
| <b>1.</b>                  | Within the maximums specified in Exhibit 2.4.3-1 the base capacity made available to the customer in each classification is determined by the number and type of terminating or connecting arrangements furnished from time to time pursuant to his order and is limited to the capacity so determined.                                                                                                                                                                                                                |

| 2.4.4 | Terminating Arrangements                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A.    | <p>Terminating arrangements for use with the various types of base capacity are furnished as service terminals for use as a wideband channel or as service terminals for use as individual channels of a lesser capacity. A service terminal is required for each service arranged for use by the customer, for each connection of service to a station, or for each connection of service to a Verizon office for the purpose of establishing a channel in connection with foreign exchange service. When a channel switching arrangement is provided, each station at the switching point requires a service terminal for each of the channels to which it is connected and which can be operated as a separate channel.</p> <p>1. Where service terminals for use as individual channels of a lesser capacity are furnished, the Type numbers as shown in Exhibit 2.4.4-1 are assigned by reference to the individual channel as if it were furnished under. Series 1000, 2000 or 3000 channels by dropping the second-digit of the regular Type number and adding a five as the first-digit of the new four-digit Series 5000 Type number.</p> |
| B.    | <p><b>Moves and Changes—</b> When a service terminal is moved, nonrecurring charges apply. When a change is made in the classification of the service terminal, a nonrecurring charge applies for each service terminal that is changed or added new in the base capacity.</p> <p>1. When a customer's existing channels and services become channels and services of a base capacity, nonrecurring charges for service terminals do not apply provided service terminals of the same classifications are continued in use without interruption.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| C.    | <p><b>Service Terminals for Use as a Wideband Channel</b></p> <p>1. <b>Type 5501—</b> Service terminals to accommodate the transmission of data signals at a rate of 40,800 bits per second in sequence, including one telephone channel termination for coordination. The channels developed by each service terminal have the total equivalent of twelve telephone channels.</p> <p>2. <b>Type 5502—</b> Service terminals to accommodate the transmission of data signals at a rate of 50,000 bits per second in sequence, including one telephone channel termination for coordination. The channels developed by each service terminal have the total equivalent of twelve telephone channels.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| D.    | <p><b>Service Terminals for Use as Channels of a Lesser Capacity</b></p> <p>1. <b>Voice—</b> Service terminals suitable for terminating channels having transmission characteristics and with terminating arrangements similar to those furnished under Series 2000 and 3000 (Type 3001 only) channels. | <b>2.4.5 Connecting Arrangements</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                            | A connecting arrangement is required for each connection of a channel furnished under this series to the following channels or arrangements. <ol style="list-style-type: none"><li>1. An interexchange channel furnished under other series, except where the connection is by means of a switching arrangement</li><li>2. An alternate use arrangement except when a connecting arrangement is furnished for the preceding purpose, or a service terminal is provided.</li></ol> |
| <b>B.</b>                            | A connecting arrangement charge equal to the service terminal charge for the first station on the channel applies for each connecting arrangement.                                                                                                                                                                                                                                                                                                                                |
| <b>C.</b>                            | When a customer wishes to make the connection at will, special charges apply for the function performed.                                                                                                                                                                                                                                                                                                                                                                          |

| <b>2.4.6 Station Arrangement</b> |                                                                                                                                                                                       |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                        | When Type 5106 interexchange channels are provided for use with teletypewriter service terminals, station arrangement terms and conditions as specified for Type 1006 channels apply. |

| <b>2.4.7 Channel Conditioning Arrangement</b> |                                                                                                                                                                                                                                     |
|-----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                                     | When Type 5302 interexchange channels are provided for use with data service terminals and used for either Type C1, C2 or D1 data transmission, channel conditioning arrangement charges as specified for Type 3002 channels apply. |

| <b>2.4.8 Terms and Conditions</b> |                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                         | Channels furnished within this series are provided only through the use of Series 5000 terminating or connecting arrangements provided by Verizon. The customer cannot create additional channels from channels furnished under this series except that the customer can create additional channels from channels of voice grade or less to the extent permitted under the provisions of Section 1. |
| <b>B.</b>                         | Channels and terminating arrangements furnished for purposes specified herein are suitable for these purposes. While other uses are permitted, channels and terminating arrangements are not represented as being satisfactory for other uses.                                                                                                                                                      |
| <b>C.</b>                         | When a wideband channel is arranged for alternate use as channels of lesser capacity in accordance with terms and conditions for alternate use, one voice grade channel will be associated with the wideband service terminal for coordinating purposes and this channel may not be suitable for other purposes.                                                                                    |

Effective: January 1, 2015

| 2.5.2 Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>         | Series 6000 channels are furnished for one-way program transmission in connection with loudspeakers and sound recording.                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>B.</b>         | <b>Type 6002 Schedule D</b> provides for the occasional use of program transmission facilities, without special operation and supervision, for the transmission of audio material within a frequency range from approximately 200 to 3,500 cycles per second. Transmission limitations permit the satisfactory transmission of the above frequency range only over limited distances. This type covers the provision of interexchange channel facilities and services, including the necessary bridging connections. |
| <b>C.</b>         | <b>Type 6003 Schedule C</b> provides for the continuous use of program transmission facilities as described for Type 6002 preceding.                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>D.</b>         | <b>Type 6004 Schedule B</b> provides for the occasional use of program transmission facilities, with special operation and supervision, for the transmission of program material within a frequency range from approximately 100 to 5,000 cycles per second. This type covers the provision of interexchange channel facilities and services, including such station connections as may be required.                                                                                                                 |
| <b>E.</b>         | <b>Type 6005 Schedule A</b> provides for the continuous use of program transmission facilities as described for Type 6004.                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>F.</b>         | <b>Type 6006 Schedule BB</b> provides for the provides for the occasional use of program transmission facilities, with special operation and supervision, for the transmission of program material within a frequency range from approximately 50 to 8,000 cycles per second. This type covers the provision of interexchange channel facilities and services, including such station connections as may be required.                                                                                                |
| <b>G.</b>         | <b>Type 6007 Schedule AA</b> provides for the continuous use of program transmission facilities as described for Type 6006.                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>H.</b>         | <b>Local Channels Schedule F</b> provides for program transmission facilities within an exchange are between the following locations.                                                                                                                                                                                                                                                                                                                                                                                |
| 1.                | Two stations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

Effective: February 13, 2026

Verizon New England Inc.

## 2. Private Line Services

### 2.5 Series 6000 Channels

As of October 31, 2014, all Private Line Series 6000 Channels are no longer available to new customers. Existing customers may maintain their channels; however, term commitment plans will not be renewed. Effective February 13, 2026, this service is no longer available to new customers. Moves, changes or modifications to this service will no longer be supported. Service modifications for customers with existing contracts are subject to the terms of their contracts. For wire centers specific service withdrawal information, please refer to Part J, Section 1, of this Product Guide.

|-----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Data Station Selector (DSS)</b>            | —A private line data switching device located in a Verizon central office which is capable of making connections between a four-wire input and up to 128 outputs, two-wire or four-wire, one at a time, under the control of the master station. DSS's are designated either primary or secondary. |
| <b>Master Station</b>                         | —The master station comprises a customer provided terminal and a Selector Control Unit (SCU) located on the customer's premises. From this location, polling of each remote station is provided.                                                                                                   |
| <b>Primary Data Station Selector (PDSS)</b>   | —A DSS which is connected to a SCU.                                                                                                                                                                                                                                                                |
| <b>Remote Station</b>                         | —Any one of the many stations, located on a customer's premises, which can be polled from the master station via the associated DSS.                                                                                                                                                               |
| <b>Secondary Data Station Selector (SDSS)</b> | —Any DSS connected to the PDSS that is arranged with the proper options.                                                                                                                                                                                                                           |
| <b>Selector Control Unit (SCU)</b>            | —The SCU is provided by the customer to transmit control signals to a DSS and/or receive supervisory signals from the DSS.                                                                                                                                                                         |

| 2.9.2 Description |                                                                                                                                                                                                                                                                                                                               |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>         | DSAS service is a multi-station, voice grade private line data service designed to establish point-to-point connections between a master station and a number of remote stations, one at a time.                                                                                                                              |
| <b>1.</b>         | The order of connections made from the master station to remote stations may be either sequential (fixed) or addressable (under the control of the master station). Direct transmission between remote stations is not possible, nor is simultaneous communications from the master to more than one remote station possible. |
| <b>B.</b>         | DSAS requires the use of equipment and Type 3002 channels provided herein.                                                                                                                                                                                                                                                    |
| <b>C.</b>         | DSAS is not designed to provide alternate voice-data transmission and this type of transmission is not supported. DC continuity between master and remote stations is not provided.                                                                                                                                           |

| 2.9.3 Service Arrangements |                                                                                                                                                                                                                                                                                                                             |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                  | DSAS arranged for sequential operation requires customer specification, prior to installation, of the order of connection from the DSS to the remote stations. The customer provided terminal equipment must be compatible with DSAS equipment. The customer also must specify one of the following sequential DSS options. |
| <b>1.</b>                  | <b>Automatic Step</b> — A DSS arrangement in which the duration and order of connections are fixed.                                                                                                                                                                                                                         |

Effective: February 13, 2026

Verizon New England Inc.

## 2. Private Line Services

### 2.9 Dataphone Select-A-Station Service (DSAS)

Effective February 13, 2026, this service is no longer available to new customers. Moves, changes or modifications to this service will no longer be supported. Service modifications for customers with existing contracts are subject to the terms of their contracts. For wire centers specific service withdrawal information, please refer to Part J, Section 1, of this Product Guide.

| 2.9.3 Service Arrangements |                                                                                                                                                                                                                                                                                          |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A. (Continued)             |                                                                                                                                                                                                                                                                                          |
| 2.                         | <b>Automatic Step With Reset</b> — A DSS option in which the duration and order of connections are fixed, but the DSS resets to the beginning of the connection cycle upon command from the master station. A DSS with this option cannot be used as a PDSS in a tandem DSS arrangement. |
| 3.                         | <b>Controlled Step</b> — A DSS arrangement which allows the customer to have in-service control over the duration of the connection, however the order is fixed.                                                                                                                         |
| B.                         | DSAS arranged for addressable operation provides a DSS arrangement in which the duration and order of connections are variables controlled by the master station.                                                                                                                        |

| 2.9.4 Access Lines |                                                                                                                                                                                                                                                       |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A.                 | Access from the PDSS to the customer provided SCU is obtained through a Type 3002 channel. Full duplex rates and charges apply for the channel. In addition, one four-wire channel connection is required per PDSS to SCU.                            |
| B.                 | Access to each SDSS from the PDSS is obtained through a Type 3002 channel. In addition, a four-wire channel connection is required at the PDSS and the SDSS.                                                                                          |
| C.                 | Access to each remote station from the Primary or Secondary Data Station Selector is obtained through a Type 3002 channel. Full or half duplex rates and charges apply in addition to the two-wire or four-wire channel connection rates and charges. |

| 2.9.5 Application of Rates and Charges |                                                                                                                                  |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| A.                                     | Service charges apply in addition to the rates and charges for DSAS.                                                             |
| B.                                     | Change charges are applicable for changes from sequential operation to addressable operation, and, to change sequential options. |

Effective: February 13, 2026

**2. Private Line Services**  
**2.10 Airport Dial Telephone Service**

| <b>2.10.1 Description</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                 | Airport dial telephone service consists of dial switching equipment offered for the common use of airline companies and others located at Logan Airport.                                                                                                                                                                                                                                                                                                                                                                             |
| <b>B.</b>                 | Verizon will furnish the necessary common dial switching equipment for use in connection with airport dial telephone service. Main and extension station lines may be furnished to other offices of those customers who have airport dial telephone service at the airport, or to agencies of the United States Government, who have a direct responsibility for aircraft operations. Verizon's connecting equipment to be associated with common use privately owned paging service is included as an integral part of the service. |
| <b>C.</b>                 | Other Verizon services and equipment that can be appropriately associated with airport dial telephone service will be offered at the rates and charges set forth elsewhere in this Product Guide.                                                                                                                                                                                                                                                                                                                                    |

| <b>2.10.2 Terms and Conditions</b> |                                                                                                                                                                                                                                                                                                         |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                          | Carrying plant (such as poles and conduit, including trenching) required to provide directly routed main or extension station lines between buildings, within the airport boundaries, shall be customer owned. The carrying plant may be built by the customer or by Verizon at the customer's expense. |

| <b>2.10.3 Application of Rates and Charges</b> |                                                                                                                                                                                                                                                                                                                                                  |
|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>A.</b>                                      | Service charges apply as appropriate.                                                                                                                                                                                                                                                                                                            |
| <b>B.</b>                                      | A minimum monthly charge for 125 main station lines is applicable to each system. Charges billed under this regulation will be prorated among customers of a system in proportion to the number of main station lines they have in-service.                                                                                                      |
| <b>C.</b>                                      | In addition to the monthly rates for main station lines and extension station lines in another building, within the boundaries of the airport or when located outside the boundaries of the airport, when served by Verizon's general distribution plant, channel rates and charges for a Type 2001A channels for a PBX main station line apply. |
| <b>D.</b>                                      | For lines from PBX systems, the channel facilities between the airport dial telephone service system and a PBX system are furnished at the rates and charges for Type 2001B channels (tie lines).                                                                                                                                                |
