3.0 LOCAL EXCHANGE SERVICE -- Category I(Cont'd)3.2 Business Trunks

Business Trunk Service provides customers with access to and from the Public Switched Telephone Network (PSTN) for inbound, outbound or two-way call traffic. The trunk connection can be either analog or digital depending on the customer's requirements.

Analog trunk service is offered via standalone Private Branch Exchange (PBX) or Direct Inward Dial (DID) Trunks, while digital connections are provided through Digital Switched T-1 Service.

Direct Inward Dial Trunks can be customized to support customers call traffic requirements:

In-Only Trunks: A One-Way trunk that only allows traffic from the XO switching equipment to be transmitted to the customer's PBX.

Out Only Trunks: A One-Way Trunk that only allows traffic originating in the customer's PBX to be transmitted to the XO switching equipment.

Two-Way Trunks: A Trunk which allows traffic to be transmitted from either the customer's PBX or the XO switching equipment.

In-Only with DID Trunk: A One-Way trunk equipped with Direct Inward Dialing Service that allows traffic from the XO switching equipment to be transmitted to the customer's PBX.

Two-Way with DID Trunk: A Trunk equipped with Direct Inward Dialing Service that allows traffic to be transmitted from either the customer's PBX or the XO switching equipment.

Direct Inward Dialing (DID) Service: a special trunking arrangement which permits incoming calls from the exchange network to reach a specific PBX station directly without an attendant's assistance.

Fractional T1 Trunks

Basic T1 Facility - A T1 facility that is equipped with In-Only, Out-Only, or Two-Way trunks.

Advanced T1 Facility - A T1 facility that is equipped with In-Only with DID or Two-Way with DID trunks.

Each PBX Analog Trunk & Digital Switched T-1 includes the following features at no additional charge.

Hunting:

Ascending Trunk Selection: Ascending Trunk Selection occurs when a switching unit selects from a Trunk Group the first available Trunk going from the first trunk of the trunk group, ascending to the last trunk of the Trunk Group. (example: hunting from the 1st trunk through last trunk on Trunk Group)

Descending Trunk Selection: Descending trunk selection occurs when a switching unit selects from a Trunk Group the first available Trunk going from the last trunk of the trunk group, descending to the first trunk of the Trunk Group. (example: hunting from last trunk of Trunk Group toward the 1st trunk of the Trunk Group).

Least Idle Trunk Selection ("LIDL"): LIDL trunk selection occurs when a switching unit selects from a Trunk group the Trunk that has been idle for the shortest period of time.

Most Idle Trunk Selection ("MIDL"): MIDL Trunk selection occurs when a switching unit selects from a Trunk group the Trunk that has been idle for the longest period of time.

Alternative Call Routing

Allows the customer to route calls to any service within the switch to handle calls in case of a disaster or for call overflow purposes. Typically a customer will route calls from one Trunk Group to another Trunk Group. Calls overflow to the Alternate Call Route when they encounter a busy condition. There are three types of busy conditions:

Overflow Call Processing – all trunks in the trunk group are busy.

System Busy – This busy condition is caused by network system problems, such as T1 Carrier being down or SS7 related problems.

Manual Busy – This condition is caused by the trunk group being manually taken down, typically to do maintenance on the customer side in the PBX or on the telecom side in the network switch.

LOCAL EXCHANGE SERVICES

3.0 LOCAL EXCHANGE SERVICE -- Category I(Cont'd)3.4 Integrated Services Digital Network (ISDN) Primary Rate Interface (PRI) Service

Integrated Services Digital Network (ISDN) Primary Rate Interface (PRI) is furnished for the digital transmission of information at 64 Kbps between the Company's serving wire center and ISDN-compatible terminal equipment located at the customer's premises or other service point. The service consists of a minimum of 23 B (bearer channels) and 1 D (data channel) to provide the Customer with the capabilities of simultaneous access transmission and switching of voice and data services over channelized transport. In addition, ISDN PRI provides the customer with service capabilities and features described in this tariff.

3.4.1 Conditions: This service is offered subject to the following conditions:

- (a) PRI is only available from a serving central office (CO) equipped with the necessary facilities to provide PRI service. Feature availability and service capabilities are dependent on the facilities and digital technology providing the service.
- (b) ISDN compatible terminal equipment is required for operation. It is customer's responsibility to power and obtain such equipment.
- (c) PRI service does not preclude customer from originating or receiving circuit-switched voice calls from inside or outside either their serving CO or their Local Exchange Area. Where facilities are available, customers will be able to originate and receive circuit-switched data calls outside of their serving CO.
- (d) PRI service does not provide for the transmission of packet data.
- (e) Local and long distance usage is not included in the Monthly Recurring Charge (MRC) or Non-recurring Charge (NRC) and is billed at the applicable tariffed rates.
- (f) All PRI Service must have at least one 23 B, plus 1 D PRI arrangement for signaling and control functions. A 23 B plus Back-up D PRI arrangement is required whenever more than 47 B Channels are controlled by a single D channel.

LOCAL EXCHANGE SERVICES

3.0 LOCAL EXCHANGE SERVICE -- Category I(Cont'd)3.4 Integrated Services Digital Network (ISDN) Primary Rate Interface (PRI) Service (Cont'd)3.4.1 Conditions (Cont'd)

- (g) Each PRI is equipped with one telephone number. For Direct Inward Dial (DID) service, additional telephone numbers may be ordered in blocks of 10, 20 or 100 depending on customer location.
- (h) Clear Channel is available when all Carrier Equipment and customer equipment signaling is set to B8ZS. (See Service Components for definition.)

3.4.2 Service Components: The following Service Components are included in the MRC when ordering ISDN PRI:

- (a) Primary Rate Access Line: Provides a four-wire access loop from the customer premise to the serving CO. The transmission via this loop supports Clear Channel Capability.
- (b) Primary Rate Interface: Provides the multiplexing to support up to 23 B Channels at 64 Kbps and 1 D Channel for signaling at 64 Kbps. With Non-Facilities Associated Signaling, the primary rate interface can provide up to 24 B Channels at 64 Kbps.
- (c) Primary Rate Channels: Provides unlimited usage of the channel that will transport voice or data up to 64 Kbps over any B Channel.
 - 1. Voice Calls may be completed to both ISDN and non-ISDN lines.
 - 2. Data Transmission on the B Channels will be circuit-switched at 64 Kbps within the switch and between compatible CO's. ISDN interconnection to non-ISDN equipped CO's may be potentially subjected to analog transmission or sub-rated to 56 Kbps.
 - 3. B Channels can be allocated for specific services, such as DID, Direct Outward Dialing (DOD), Two-Way Trunk, Dedicated Inbound and Outbound Long Distance, or customer can optionally configure channels to access multiple services on a per-call basis

LOCAL EXCHANGE SERVICES

3.0 LOCAL EXCHANGE SERVICE -- Category I(Cont'd)3.4 Integrated Services Digital Network (ISDN) Primary Rate Interface (PRI) Service (Cont'd)3.4.3 Primary Rate Channel Configurations

Customers may order any one of the following three service configurations when ordering ISDN. However, the first PRI Access Line purchased must be the Standard Channel Configuration. A customer requiring additional ISDN PRI Access Lines may choose the 24 B channels with Non Facilities Associated Signaling or 23B with a Backup D Channel configuration.

1. Standard Channel Configuration: Provides 23 B Channels at 64 Kbps and 1 primary D Channel at 64 Kbps. The B channels carry digitized customer traffic, voice and/or data. The primary D Channel is out of band signaling used to control and route all B Channel traffic on a single ISDN PRI service arrangement.
2. Full Channel Configuration: Provides additional 24 B Channels at 64 Kbps. Only available in conjunction with a Standard Channel Configuration.
3. Backup Channel Configuration: Provides additional 23 B Channels at 64 Kbps and 1 Backup D Channel at 64 Kbps. The Backup D Channel controls and routes all the B channel traffic of a single ISDN PRI service arrangement should the primary D Channel go out of service. This option is only available in conjunction with a Standard service configuration.

LOCAL EXCHANGE SERVICES

3.0 LOCAL EXCHANGE SERVICE -- Category I(Cont'd)3.4 Integrated Services Digital Network (ISDN) Primary Rate Interface (PRI) Service (Cont'd)3.4.4 Standard Service Features

The following Standard Service Features are included in the MRC when ordering any one of the Primary Rate Channel Configurations, unless otherwise stated. Additional features and services are available to customer at the applicable rates found in this tariff.

- (a) Call-by-Call Service: Provides an option to the Dedicated B Channel Configuration allowing B channels to be configured to:
 - Access multiple services on a per-call basis. Separate facilities are not needed for individual services such as DID, DOD, dedicated inbound and outbound long distance, and dial tone lines.
 - Access the circuit-switched voice and data services to share B channels and arrange them as a single trunk group. Allows incoming and outgoing circuit-switched voice and data calls to utilize B channels on a call by call basis.
 - Allow Customer to subscribe to more services than channels. The CPE signals the local CO to which type of service to access for each call; inbound/outbound trunk or dedicated long distance service.
- (b) Calling Line Identification Delivery (CLID): Customer receives the originating telephone number provided the information is forwarded by caller's Local Exchange and/or Long Distance Carrier. Incoming call identification is provided via the D channel associated with the incoming calls on a B channel to a PBX.
- (c) Calling Line Identification Delivery Blocking: Customer's telephone number(s) will not be forwarded to the called party.
- (d) Clear Channel Capability: Clear Channel is only available where technically feasible. The B Channels on ISDN PRI are clear. All signaling and control functions are handled by the D Channel allowing 64Kbps on each channel to be used for customer information.

LOCAL EXCHANGE SERVICES

3.0 LOCAL EXCHANGE SERVICE -- Category I(Cont'd)3.4 Integrated Services Digital Network (ISDN) Primary Rate Interface (PRI) Service (Cont'd)3.4.4 Standard Service Features (Cont'd)

- (e) Non-Facility Control Signaling (NFAS): Provides capability for a single D Channel to provide signaling and control for one or more ISDN PRI line, up to a maximum of five. Following the 23B+D Channel, the 24th Channel on the subsequent ISDN PRI line is made available for customer use. When purchasing more than three ISDN PRI lines, a backup D Channel is recommended.
- (f) D Channel Backup: Provides backup for the primary D channel for a customer with multiple PRI lines by automatically switching signaling capability over to another D channel if service to the primary D channel is interrupted.
- (g) Digital Voice Transmission: All voice calls are transmitted using digital signaling.
- (h) Direct Inward Dial (DID) Signaling: Permits incoming dialed calls from the exchange network to reach a specific number served by the CPE without the assistance of an attendant. Provides call identification based on digits sent to the CPE by the CO.
- (i) PBX Station ID Capability: Permits the station users number (calling party) to be transmitted over the ISDN PRI D channel from DID equipped CPE PBX's that use ISDN PRI. Number is provided by the originating station and must have an associated DID telephone number working in the CO.
- (j) Network Ring Again: Permits a calling station encountering a busy to notify the CO switch to signal the calling station when the called station becomes idle. The calling station then notifies the switch to complete the call. Enables the customer to complete calls to a busy station without continuous redialing. Certain equipment restrictions may apply.
- (k) Message Waiting Indication: Allows Utility network to pass Message Waiting Indication information between multiple entities within a PRI network serving arrangement. Requires suitably equipped ISDN switching and terminal equipment.

3.4.5 Optional Service Features

- (a) 2B channel Transfer: 2B Channel Transfer allows for the transfer of calls, the B channels are released immediately after a call is transferred, freeing up the B channels for additional call traffic. In a traditional PBX trunk environment, the two channels would be tied up for the duration of the call.

Inbound PRI is a DS-1 level service that provides trunk-side access from a customer's premise to the local XO central office. Service will be delivered to the customer premise on a digital basis only. The customer may elect to convert the digital signal to analog using customer provided channel banks at their own discretion, but XO will not provide this as part of the service.

Inbound PRI is a dedicated inbound-only service that can not be used to originate or terminate domestic long distance switched calls and is designed to support high inbound call volumes. Off-Net service shall mean service to the Customer service location is not provided entirely by XO over its own fiber or wireless facilities. Instead, service to the Customer service location is provided through the use, purchase or lease of the facilities of another local access provider other than XO, including the use of unbundled network elements or Type II facilities. A minimum one year term commitment is required with this service offering.

Customer and XO, agree that in the event of a decision by a regulatory authority at the federal, state or local level, including but not limited to the approval of a new ILEC interconnection arrangement, which alters XO's ability to offer the current contract rate, upon 30 days written notification to Customer, XO may migrate the Customer to the Off-Net Price Plan for remainder of Customer's term commitment.
