DEFINITIONS

These Definitions also apply to capitalized terms contained in written contracts between Company and Customer ("Signed Contract") which incorporate this tariff by reference and do not otherwise define those capitalized terms in the written contract.

Mileage or Mileage Band: The airline mileage between two cities can be calculated using the Vertical (V) and Horizontal (H) Coordinates of the serving wire centers associated with the Company's Terminal Locations using the following formula:

$$\sqrt{((V_1-V_2)^2+(H_1-H_2)^2)}/10$$

where V_1 and H_1 correspond to the V & H coordinates of City 1 and V_2 and H_2 correspond to the V & H coordinates of City 2.

Example:	V	H
City 1 - New York	4997	1406
City 2 – Chicago	5986	3426

$V_1 \quad V_2 \qquad H_1 \quad H_2$

$$\sqrt{((4997-5986)^2+(1406-3426)^2)}/10$$

$$\sqrt{(505852.1)}=711.2328$$

Airline Mileage = 712 miles (Result will always be rounded to the next highest mile).
