**SECTION 6 - CATEGORY 1 & CATEGORY 2 RATES AND CHARGES, (CONT'D.)****6.3     Switched Access Services**

There are three types of rates and charges that apply to Switched Access Service. These are Monthly Recurring Charges, usage rates and Non-Recurring Charges.

Monthly Recurring Charges: Monthly Recurring Charges are flat rates for facilities that apply each month or fraction thereof that a specific rate element is provided.

Usage Rates: Usage rates are rates that are applied on a per access minute or per query basis. Usage rates are accumulated over a monthly period.

Non-Recurring Charges: Non-Recurring charges are one time charges that apply for a specific work activity (i.e., installation of new service or change to an existing service).

Installation of Service: Non-Recurring charges apply to each Switched Access Service installed. The charge is applied per line or trunk.

Rate Zone: A Rate Zone is a geographic area that comprises a specific ILEC's serving territory within a state. All Usage Rates and Charges will be assessed based on the serving territory of the ILEC from which a call originates or to which a call terminates. Section 6.3.3.G contains a chart identifying the Rate Zone associated with each specific ILEC serving area within each state.

**6.3.1     Application of Rates**

- A.     The Direct Connect usage rate is assessed based on the per-minute-of-use charges found in a particular state and in some cases, within specific zones in specific states. Rates and charges for each state and zone are found in Section 6.3.3.D.1, 6.3.3.D.2, and 6.3.3.D.3.

The Tandem Connect rates will apply for all Direct Connect usage which overflows to the Access Tandem.

- B.     The Tandem Connect rate is assessed on a per-minute-of-use basis and is applicable to all tandem routed Switched Access Service minutes of use. The rate will vary based on whether the Company leases tandem switching functionality from the ILEC on a call. Tandem Connect rates are also Rate Zone based, and use the same Rate Zones found in Section 6.3.3.G.

Rates and charges for Tandem Connect minutes for which the Company does not lease the tandem switching function from the ILEC are set forth in Section 6.3.3.D.4, 6.3.3.D.5 and 6.3.3.D.6 following. Rates and charges for Tandem Connect minutes for which the Company does lease the tandem switching function from the ILEC are set forth in Section 6.3.3.D.7, 6.3.3.D.8, and 6.3.3.D.9 following.

- C.     800 Data Base Access Service Basic Query rates are also Rate Zone based, and use the same Rate Zones found in Section 6.3.3.G. Rates and charges for each state and zone are found in Section 6.3.3.E.1.

**SECTION 6 - CATEGORY 1 & CATEGORY 2 RATES AND CHARGES, (CONT'D.)****6.3     Switched Access Services (Cont'd)**

**6.3.2     Billing of Access Minutes:** Billing of Access Minutes: When recording originating calls over FGD with multi-frequency address signaling, usage measurement begins when the first wink supervisory signal is forwarded from the Customer's facilities. The measurement of originating call usage over FGD ends when the originating FGD entry switch receives disconnect supervision from either the originating End User's Local Switching Center (indicating that the originating End User has disconnected), or the Customer's facilities, whichever is recognized first by the entry switch.

For terminating calls over FGD with multifrequency address signaling, the measurement of access minutes begins when a seizure signal is received from the Carrier's Trunk group at the Point of Presence within the LATA. The measurement of terminating call usage over FGD ends when a disconnect signal is received, indicating that either the originating or terminating user has disconnected.

When recording originating calls over FGD with SS7 signaling, usage measurement begins with the transmission of the initial address message by the switch for direct

Trunk groups and with the receipt of an exit message by the switch for tandem Trunk groups. The measurement of originating FGD usage ends when the entry switch receives or sends a release message, whichever occurs first.

For terminating calls over FGD with SS7 signaling, the measurement of access minutes begins when the terminating recording switch receives the initial address message from the terminating End User. On directly routed Trunk groups or on tandem routed Trunk groups, the Company switch receives the initial address message and sends the indication to the Customer in the form of an answer message. The measurement of termination FGD call usage ends when the entry switch receives or sends a release message, whichever occurs first.
