SWITCHED ACCESS SERVICE

E. SWITCHED ACCESS RATES

1. Rate Regulations

This section contains the specific regulations governing the rates and charges that apply for Switched Access Services:

There are two types of rates and charges that apply to Switched Access Service. These are usage rates and Non-Recurring Charges.

1.1 Usage Rates: Usage rates are rates that are applied on a per access minute or per query basis. Usage rates are accumulated over a monthly period.

1.2 Non-Recurring Charges: Non-Recurring Charges are one time charges that apply for a specific work activity (i.e., installation of new service or change to an existing service).

1.2.1 Installation of Service: Non-Recurring Charges apply to each Switched Access Service installed. The charge is applied per line or Trunk.

1.3 Rate Zone: A Rate Zone is a geographic area that comprises a specific Incumbent Local Exchange Carrier's ("ILEC's") serving territory within a state. All Usage Rates and Charges will be assessed based on the serving territory of the Incumbent Local Exchange Carrier ("ILEC") from which a call originates or to which a call terminates. Section E.4.3.1 and Section E.4.3.2 contains a chart identifying the Rate Zone associated with each specific ILEC serving area within each state.

2. Application of Rates

2.1 Direct Connect: The Direct Connect rate is assessed based on the per-minute of use charges found in a particular state and in some cases, within specific zones in specific states. Rates and charges for each state and zone are found in Section E.4.3.1.1.

The Tandem Connect rates will apply for all Direct Connect usage which overflows to the Access Tandem.

2.2 Tandem Connect: The Tandem Connect rate is assessed on a per-minute-of-use basis and is applicable to all tandem routed Switched Access Service minutes of use. The rate will vary based on whether the Company pays the ILEC for leased tandem switching capability on a call. Tandem Connect Rates are also Rate Zone based, and use the same Rate Zones found in Section E.4.3.1.

Rates and charges for Tandem Connect minutes for which the Company does not lease the tandem switching function from the ILEC are set forth in Section E.4.3.2.1 following. Rates and charges for Tandem Connect minutes for which the Company does lease the tandem switching function from the ILEC are set forth in Section E.4.3.2.2 following.

SWITCHED ACCESS SERVICE

E. SWITCHED ACCESS RATES (CONTINUED)

2. Application of Rates (Continued)

2.3 8XX Number Translation Charge: The 8XX Number Translation Charge applies for the translation of a specific 8XX number to a ten digit telephone number on a per query basis.

2.4 Toll Free 8YY Transit Traffic Service: The Toll Free 8YY Transit Traffic Service rates are assessed on a per minute of use basis. If the 8YY call is delivered to the IXC over DEOTs, the Toll Free 8YY Direct Transit Minute of Use Rate will apply. If the call is instead delivered to the IXC indirectly via another LEC tandem, Toll Free 8YY Indirect Transit Minute of Use Rate will apply. These charges incorporate only the tandem switching, and appropriate portions of common multiplexing and tandem transport functionalities into the rate. Additionally, the 800 Data Base Basic Query Charge identified in Section E.4.4.1 will apply on a per query basis.

3. Billing of Access Minutes: When recording originating calls over FGD with multifrequency address signaling, usage measurement begins when the first wink supervisory signal is forwarded from the Customer's facilities. The measurement of originating call usage over FGD ends when the originating FGD entry switch receives disconnect supervision from either the originating End User's Local Switching Center (indicating that the originating End User has disconnected), or the Customer's facilities, whichever is recognized first by the entry switch.

For terminating calls over FGD with multifrequency address signaling, the measurement of access minutes begins when a seizure signal is received from the Carrier's Trunk group at the Point of Presence within the LATA. The measurement of terminating call usage over FGD ends when a disconnect signal is received, indicating that either the originating or terminating user has disconnected.

When recording originating calls over FGD with SS7 signaling, usage measurement begins with the transmission of the initial address message by the switch for direct Trunk groups and with the receipt of an exit message by the switch for tandem Trunk groups. The measurement of originating FGD usage ends when the entry switch receives or sends a release message, whichever occurs first.

For terminating calls over FGD with SS7 signaling, the measurement of access minutes begins when the terminating recording switch receives the initial address message from the terminating End User. On directly routed Trunk groups or on tandem routed Trunk groups, the Company switch receives the initial address message and sends the indication to the Customer in the form of an answer message. The measurement of terminating FGD call usage ends when the entry switch receives or sends a release message, whichever occurs first.

4.5 Special Construction

4.5.1 Basis for Rates and Charges

Rates and charges for special construction will be determined by the Company on an individual basis and based, in part, on the costs incurred by the Company and may include (1) non-recurring type charges, (2) recurring type charges, (3) termination liabilities, or (4) combinations thereof.

4.5.2 Termination Liability

To the extent that there is no other requirement for use by the Company, a termination liability may apply for facilities specially constructed at the request of the Customer.

4.5.2.1 The termination liability period is the initial service term with respect to said specially constructed facilities.

4.5.2.2 The amount of the maximum termination liability is equal to the rates and charges established pursuant to Sections E.4.5.1 and E.4.5.2.

4.5.2.3 The applicable termination liability charge is based on the normal method for calculating the unpaid balance of a term obligation. The amount of such charge is obtained by multiplying the sum of the amounts determined as set forth in Section E.4.5.2.2 preceding by a factor related to the unexpired period of liability and the discount rate for return and contingencies. This product is adjusted to reflect applicable taxes.
