

TOLL TERMINALS

A Toll Terminal consists of a jack on the Telephone Company toll switchboard connected by a channel with a branch exchange system on the customer's premises.

A. CONDITIONS

1. The use of a toll terminal is restricted to completion of outward toll messages from the customer's branch exchange system. Inward toll calls will not be completed over a toll terminal.
2. The service is available only within the exchange area in which the toll switchboard is located.
3. The service is offered only to branch exchanges, pay telephone lines and to hospitals served by dial PBX's that furnish (C) patient outward dialing from stations located in the patient's rooms.
4. Individual line zone rate differential charges apply to toll terminals when the customer is located outside the base rate area.

B. RATES

	<u>Monthly</u>	<u>Installation</u>
Toll Terminals, each **	\$42.50	See Section 3 *

* Nonrecurring charges for Business Service.

** Offering limited to units in service. Not available for new installations.
