

# Get to market fast, generate revenue quickly.

## WAN Services with Express Connect

**When you're starting a new business or opening a new site, time is of the essence. Traditionally, it can take weeks and sometimes even months to set up a new wireline service. But that doesn't mean you have to waste valuable time waiting for access to the internet or your corporate WAN.**

Express Connect uses wireless access and streamlined processes to get your connectivity up and running in as little as 8 – 10 business days after a successful order completion. While you're waiting on wireline installation, you'll be able to get to work right away with 4G LTE wireless access.<sup>1</sup> After your wireline connection is ready, Express Connect automatically converts your wireless access into a simple, cost-effective backup solution that helps keep you working even in the event of a wireline outage.<sup>2</sup> So you get better peace of mind while you stay focused on your business goals.

### Say goodbye to growing pains.

As your business grows, WAN Services with Express Connect give you quick access to your corporate network. These services let you quickly and easily extend your network to new sites with accelerated service activation. We can set up and install your customer premises equipment (CPE)<sup>3</sup> and provide ongoing maintenance. That way you can open for business quickly and jumpstart new revenue.

No matter what stage of growth you're in or what your unique network configuration, Express Connect works with several of our business networking solutions, including:

- Private IP
- Secure Gateway
- Managed WAN Services
- Internet Dedicated Services
- Managed SD WAN

### Reliable service at a great value

Business today knows no boundaries. Luckily, we have built one of the largest, most reliable and secure global IP networks in the world. So where you are, we've got you covered.

After your wireline installation is complete, any time there is an unexpected disruption to your network connection, we'll automatically provide backup wireless support for your critical communications.

Whether you are a new business or you want to add additional remote sites to your corporate network, we can get you up and running in as few as 8 – 10 business days.

With Express Connect, not only can we get you up and running fast, we also offer:

- Integrated equipment for wireless and wireline access/transport.
- A single contract and invoice for both wireless and wireline access.
- Fully managed service, including wireless access.
- Wireless access that automatically converts to backup support once primary wireline services are up and running.
- Unlimited wireless data allowance for U.S. customers until wireline services are activated.<sup>4</sup>
- Wireless static IP support in the U.S.
- 1 GB monthly data allowance with per GB overage costs of that go into effect only if backup 4G LTE wireless access is required (U.S. only). Outside of the U.S. price, speed and data allowance varies.

### Why Verizon

With Express Connect, our U.S. customers get two leading networks in a single service: the most reliable mobile network in America, according to RootMetrics, and one of the largest, most reliable and most secure global IP networks in the world. When you have our networks in your corner, you can rest easy knowing you can better manage the risk of downtime.

### Learn more.

For more information about the services this solution supports, speak with your account representative.

Express Connect is available within the U.S. and select European countries. See your VZ account representative for details.

1. In locations where 4G LTE access may be limited or unavailable, other wireless services such as 3G may be utilized.
2. Some limited design arrangements may not include backup options outside of the U.S. Speak to your account representative for more details.
3. Express Connect requires the purchase of Verizon-specified customer provided equipment and CPE maintenance.
4. There is a one-time initializing charge to activate Express Connect. U.S. customers will enjoy unlimited data until wireline installation is complete, after which they will be charged a recurring monthly service charge, plus any wireless overage charges accrued. This is limited to design arrangements where backup service is included.
